CHAPTER XXX.

MANUAL AND INDUSTRIAL TRAINING.

References to recent Reports of the United States Commissioner of Education, in which this subject has been treated or statistics published: Annual Report for 1888–89, pages 411–428, 1362–1367; 1889–1890, pages 1148, 1209–1212, 1351–1356; 1891–92, page 1197; 1892–93, pages 186, 188, 560–575; 1893–94, pages 877–949, 2093–2169; 1894–95, page 2170; 1895–96, pages 989–992, 1001–1152, 1321–1329, 1510–1521 (column 8); 1896–97, pages 193–197, 699–703, 2211–2222 (column 8), 2279–2294; 1897–98, pages 141, 194, 723, 2370–2382 (column 8), 2419–2440; 1898–99, pages 26, 83, 179–189, 208–209, 853–863, 1355–1361, 1442, 1448, 1525–1536 (column 8), 2139–2162; 1899–1900, pages 329, 875, 1811–1821 (column 8), 2437–2467, 2505; 1900–1901, pages 216, 217, 1510, 1961, 2231–2268, 2342–2372; 1901–2, pages 1294–1311 (column 9), 1959–2002; 1902–3, pages 1019–1046, 1427–1445 (column 9), 2139–2190.

In more than two-thirds of the cities of the United States having 8,000 population and over, manual training is taught in some of the grades of the public schools. There are 588 school systems in cities of the size named, and in 411 of these manual training forms part of the course of instruction. This was a marked increase for the year 1903–4. In 1890 only 37 city school systems included manual training in the course of instruction. In 1894 the number had increased to 95, in 1896 to 121, in 1898 to 146, in 1900 to 169, in 1901 to 232, in 1902 to 270, and in 1903 the number had increased to 322. Table 1 gives these figures by States and geographical divisions. Table 2 gives the names of the cities in which manual training was given in 1903–4, indicating for each city the grades in which it was taught.

Ten years ago this Bureau received reports from 15 manual training schools. These schools had 3,362 students in manual training, 2,403 males and 959 females, all of secondary or high school grade. The next year, with the same number of schools reporting, there were 4,892 students, 3,621 males and 1,271 females. In 1897 the number of schools had increased to 40, with 13,890 students, 9,224 males and 4,666 females. Industrial training schools, or schools in which certain trades were taught, were included with the manual training schools proper, and since 1897 the statistics given are for "manual and industrial training." In 1898 there were 58 manual and industrial training schools, with 18,977 students, 12,975 males and 6,002 females. All these were reported as students of secondary or high school grade. Those not actually pursuing such secondary studies had been required to master certain secondary branches before entering. In 1899 the number of schools had increased to 66, with 20,701 students, 13,903 males and 6,798 females. In 1900 there were 69 schools, with 24,716 students, 15,819 males and 8,897 females. In 1901 the number of schools reporting was 78, with 28,981 students, 18,928 males and 10,053 females. In 1902 the number had increased to 85 schools, with 29,507 students, 18,771 males and 10,736 females. In 1903 there were 95 schools, with 33,062 students, 20,170 males and 12,892 females, and in 1904 there were 98 schools, with 36,680 students, 20,701 males and 15,979 females.

Tables 3, 4, 5, and 6 give the statistics for the ten years mentioned, showing the growth of manual and industrial training schools since 1894. Every effort has been

Digitized by Google

made to exclude from these tables the enumeration of all students below secondary or high school grades.

Reports were received from 195 manual and industrial training schools in 1904. These include the 98 of high school grade, mentioned above, 52 of elementary grade, and 45 industrial schools for Indians.

Table 7 gives a summary of the statistics of the 195 schools. These schools had 65,495 pupils in manual and industrial training, 27,783 in elementary grades, and 37,712 in secondary or high school grades. Of those in secondary grades 14,332 were not receiving literary instruction, but were regarded as students of high school grade before admission. The actual number receiving literary instruction of secondary school grade in these 195 schools was 23,380. It may be noted also that of the elementary pupils in industrial training 3,331 were not receiving literary instruction. The actual number receiving such instruction of elementary grade was 24,452. Table 7 also shows that the 195 schools had 1,389 teachers of elementary and secondary studies and 2,043 instructors in manual and industrial training. Table 8 gives, by sex, the number of teachers and students already shown by totals in table 7. The statistics of the 45 Indian schools are included in these two tables. Nine of the Indian schools had 1,032 students of high school grade and 9,260 of elementary grades in industrial training.

Table 9 is a financial summary, so far as the requisite data could be obtained from manual and industrial training schools, not including the schools for Indians. The aggregate value of buildings, machinery, tools, and other equipment for the schools reporting was $10,197,524. These schools had a total expenditure for the scholastic year of $1,480,685. Of this amount $1,028,586 was for pay of teachers, $127,529 for materials, $82,060 for new tools and repairs, and $242,510 for incidentals and for purposes not classified.

Table 10 gives in detail the number of students and teachers in the 150 manual and industrial training schools, exclusive of Indian schools. Table 11 is a statistical showing for the 45 schools for Indian children. Tables 12 and 13 show the number of pupils in each branch of industrial or manual training in each school from which this information could be obtained. Industrial training is offered in most of the negro schools, reform schools, and schools for defectives, statistics of which will be found in the chapters devoted to these classes of institutions.

SPECIAL AND UNCLASSIFIED SCHOOLS.

Certain schools which could not be classified or fully reported as manual or industrial training schools, and others giving incomplete statistics, are mentioned below:

Alabama Girls' Industrial School, Montevallo, Ala.—This is a State institution for white girls. In the language of the legislative act the school "is established for the purpose of giving therein instruction in the liberal arts and sciences; English language and literature, the science and art of teaching as a profession, music, drawing, painting, decorative art, botany, horticulture, floriculture, scientific dairying, cooking, sewing, dressmaking, millinery, bookkeeping, stenography, typewriting, telegraphy, and any and every other branch of human knowledge or industry by which women may live."

Cogswell Polytechnic College, San Francisco, Cal.—This school offers the following courses, of three years each: Mechanic arts, drafting, steam engineering, surveying, domestic science, art. There is a one-year commercial course.

Bliss Electrical School, Washington, D. C., offers a course complete in one year in electrical engineering, including mechanical drawing.

Bradley Polytechnic Institute, Peoria, Ill., has as many as 10 departments, including those of chemistry, domestic economy, manual arts, physics.

Simmons College, Boston, Mass., was established by the will of the late John Simmons "as an institution in which instruction in such branches of art, science, and

Digitized by Google

industry might be given as would best enable women to earn an independent livelihood." The courses offered for the year of opening (1902–3) included 4 courses in household economies, 3 secretarial courses, 2 library courses, and 5 scientific courses.

Lowell Textile School, Lowell, Mass.—This school has four regular courses of three years each, as follows: Cotton-manufacturing course, wool-manufacturing course, general course in designing, course in chemistry and dyeing.

Pratt Institute, Brooklyn, N. Y.—Besides the regular high-school department, this school has the following departments: Fine arts, domestic arts, domestic science, science and technology, kindergarten, library.

The Brooklyn Institute of Arts and Sciences, Brooklyn, N. Y., has departments of archeology, architecture, astronomy, botany, chemistry, domestic sciences, electricity, engineering, entomology, fine arts, geography, geology, law, mathematics, microscopy, mineralogy, music, painting, pedagogy, philology, photography, physics, political science, psychology, zoology.

Ethical Culture Schools, New York, N. Y.—Throughout the entire course of eight years in the elementary grades periods are given to manual work and art. In the high school the work in art is continued, but manual training is an elective study.

Hebrew Technical Institute, New York, N. Y., offers a course of study extending over three years, including the common branches and algebra, geometry, physics, chemistry, electrical and steam engineering, wood and metal working.

New York Trade School, New York City, has courses of instruction in drawing, electrical work, house, sign, and fresco painting, blacksmithing, bricklaying, plastering, carpentry, printing, steam and hot-water fitting, sheet-metal work, and plumbing.

School of Industrial Art and Technical Design for Women, New York, N. Y.—This school offers, besides courses in free-hand and mechanical drawing, instruction and practice in designs for stained glass, carving, lace, oilcloth, book covers, wall papers, furniture coverings, draperies, tapestries, carpets, rugs, furniture, mantles, hangings, staircases, lamps, ornaments of all kinds.

Rochester Athenæum and Mechanics' Institute, Rochester, N. Y., has three well organized and equipped departments with several three-year courses in each. The departments are industrial and fine arts, manual training, domestic science, and art.

The Ohio Mechanics' Institute, Cincinnati, Ohio, "is a technical school in which certain branches, demanded by local industries, are made prominent." At present there are courses of instruction in mechanical drawing and engineering, architectural drawing and engineering, free-hand drawing and general designing, painting in oil and water colors; also mineral colors, chemistry, physics, and electricity, mathematics, modern languages, general instruction.

The School of Industrial Art of the Pennsylvania Museum, Philadelphia, Pa., has now in operation ten schools or courses, as follows: Drawing, applied design, normal instruction, textile design and manufacture, wood working and carving, decorative painting, illustration, decorative sculpture, architectural design, modern languages.

Drexel Institute of Art, Science, and Industry, Philadelphia, Pa., has no fewer than a dozen departments, with several courses in each. The leading departments are mentioned under fine and applied arts, mechanic arts, electrical engineering, commerce and finance, science, technology, domestic science, domestic arts, normal training, library training, English language and literature, physical training.

Girard College, Philadelphia, Pa.—The courses of instruction cover the common branches, French, Spanish, mathematics, manual training, electrical mechanics, plumbing and gas fitting, carpentry, blacksmithing, foundry work, metal work, special training for the trades, military drill.

Pittsburg School of Design for Women, Pittsburg, Pa.—Instruction is given in all branches of drawing and painting, with special reference to their application in the fine and applied arts. Sculpture and architecture are made prominent.

Digitized by Google

The Rhode Island School of Design, Providence, R. I.—In the free-hand department instruction is given in drawing, painting, modeling, wood carving, decorative design, sculpture. The mechanical department has courses in mechanics, engineering, mathematics, architecture.

New Bedford Textile School, New Bedford, Mass.—The principal course of instruction in the school relates to the general manufacturing of cotton, giving spinning, weaving with a special course in mill designing, engineering, and general transmission of power.

Cooper Union, New York, N. Y.—A school endowed by the late Peter Cooper for the advancement of science and art, having a day and an evening session. In addition to the day and evening art classes, a free day school of technical science is maintained, including departments of engineering, physics, chemistry, electricity, naval architecture, etc.

New York School of Art, New York, N. Y.—The original purpose of this school was to afford instruction in the fine arts, but owing to the growing interest in illustration and ornamental and decorative work, industrial and applied art were added, with a complete course in architecture.

Girls' Industrial College, Denton, Tex.—This school was opened in 1903. The subjects taught thus far have been arranged under four departments: English-science department, domestic arts, fine and industrial arts, and commercial arts. As the college develops, new departments will be added.

Virginia Mechanics' Institute of Technology, Richmond, Va.—Instruction is given in arithmetic, algebra, geometry, trigonometry, applied mechanics, bookkeeping, free-hand drawing, architectural drawing, mechanical drawing, naval architecture, chemistry, physics, electricity, and modeling.

Maryland Institute for the Promotion of the Mechanic Arts, Baltimore, Md.—The school has a night and a day course, consisting of artistic and industrial drawing, painting, modeling in clay, sculpture, and designing.

Washington Linotype School, Washington, D. C.—This school was established in 1899 to provide linotype instruction for union printers who have had no shop training in this kind of machine work.

Illinois College of Photography, Effingham, Ill.—This institution is devoted exclusively to teaching high-class photography. Its annual enrollment is at present over 250, consisting of students from all parts of the world.

Wells Memorial Institute, Boston, Mass.—The object of this institution is to provide working people mutual helpfulness, mental and moral improvement. The course includes classes in architectural and machine drawing, practical electricity, steam engineering, dressmaking, millinery, cooking, and stenography and typewriting. The present membership is from 1,800 to 1,900 men and women.

School of Messrs. R. Hoe & Co., New York, N. Y.—This school is maintained by this well-known company of manufacturers of printing presses and other machinery. In order to better equip the employees a night school was opened. The course of instruction includes English, mathematics, geometry, free-hand and mechanical drawing. The membership of the school is restricted to the apprentices of the company.

Young Women's Christian Association, Brooklyn, N. Y.—This school has large classes of various nationalities studying English. The industrial course consists of cooking, sewing, dressmaking, millinery, embroidery, basketry, nursing, commercial department.

The Young Women's Christian Association, Boston, Mass.—This school furnishes a complete course in dressmaking, millinery, and domestic science, cooking, sewing, general housework, laundry work, and home nursing.

Young Women's Christian Association School, New York, N. Y.—The object of the association is to promote the temporal, social, mental, moral, and religious welfare

Digitized by Google

of young women. During the earlier period of the association the work was largely confined to commercial branches; now the industrial branches have overshadowed all other branches combined. The course includes thorough instruction in hand and machine sewing, dressmaking, millinery, art embroidery, feather curling, cooking, and a course for trained attendants. The industrial art course includes mechanical, free-hand, cast, and life drawing, pen and ink work, crayon and water color, clay modeling, wood carving, and designing.

Waltham Horological School, Waltham, Mass.; Omaha Watch Repairing, Engraving, and Optical Institute, Omaha, Nebr.; St. Louis Watchmaking School, St. Louis, Mo.—These are schools for teaching the practical work of watchmaking, repairing clocks, jewelry repairing, engraving, and optics. The course of instruction also embraces etching, chasing, metal work, card-plate and steel-die work.

The Industrial Chemical Institute, Milwaukee, Wis.; Wahl-Henius Institute of Fermentology, Chicago, Ill.; National Brewers Academy, New York, N. Y.; United States Brewers Academy, New York, N. Y.—These schools offer courses in the analytical study of all materials used by modern brewers, with particular reference to all new devices for cooling, aerating, fermenting, filtering, carbonating, racking, and pasteurizing.

TABLE 2.—*Cities in which manual training (other than drawing) was given in the public schools, 1903–4.*

Cities.	Grades in which manual training was given.
ALABAMA.	
Birmingham	All below high school.
Florence	3 to 8.
Gadsden	1 to 8.
Selma	Do.
ARKANSAS.	
Fort Smith	2 to 8 and high school.
CALIFORIA.	
Alameda	All grades excepting high school.
Bakersfield	1 to 6.
Fresno	8 to 10.
Los Angeles	1 to 8.
Oakland	High school.
Pasadena	1 to 4 and kindergarten.
Pomona	1 to 11.
Redlands	1 to 8,
San Bernardino	1 to 10.
San Diego	4 to 8.
San Jose	1 to 3.
San Francisco	7 to 8.
Santa Barbara	1 to 8.
Stockton	7 and 8.
COLORADO.	
Colorado Springs	1 to 7.
Denver	4 to 8.
Pueblo:	
District No. 1	1 to 8 and high school.
District No. 20	1 to 8.
CONNECTICUT.	
Bristol	All above third.
Hartford	7 and high school.
Manchester (South)	1 to 8.
Naugatuck	7 to 9 and high school 1 and 2.
New Britain	1 to 8.
New Haven	4 to 7.
New London	7 and 8.
Stamford	6 to high school.
Rockville	8 and high school.
Willimantic	6 to 8.
DELAWARE.	
Wilmington	5 to 11.
DISTRICT OF COLUMBIA.	
Washington	5 to 8.
FLORIDA.	
Tampa	1 to 8.
GEORGIA.	
Athens	1 to 8.
Atlanta	Do.
Brunswick	Do.
Columbus	5 to 8 and high school.
Milledgeville	1 to 7 and high school.
Macon	1 to 7 and 3 high school.
Rome	1 to 8.
Thomasville	1 to 3.
Waycross	1 and 2 (primary).
IDAHO.	
Boise	7 and 8 and high school.

Cities.	Grades in which manual training was given.
ILLINOIS.	
Aurora (East side)	6 to 8 and high school.
Aurora (West side)	1 to 8.
Bloomington	All below high school except fifth.
Cairo	High schools.
Champaign	2 to 8 and first in high school.
Charleston	1 to 3.
Chicago	1 to 8 and manual training high schools.
Dekalb	1 to 8.
Dixon	Do.
Duquoin	1 to 4.
Elgin	1 to 8.
Evanston	6 to 8.
Galesburg	High school.
Harvey	6 to 8.
Jacksonville	7 to 8 and high school.
Joliet	7 and 8.
La Salle	High school.
Mattoon	1 to 4.
Macomb	Primary.
Maywood and Melrose Park.	1 to 8.
Moline	6 to 8 and high school.
Monmouth	1 to 8.
Mount Vernon	1 to 3.
Peoria	1 to 8.
Quincy	Do.
Rockford	7 to 10.
Rock Island	7 and 8 and high school.
Springfield	7 to 10.
Sterling	High school.
Streator	Do.
Taylorville	Primary.
Urbana	1 to 8.
Waukegan	7 to 8.
INDIANA.	
Bloomington	1 to 8.
Bluffton	Do.
Crawfordsville	1 to 6.
Evansville	9 to 12.
Fort Wayne	1 to 8.
Franklin	1 to 3.
Goshen	1 to 7.
Huntington	1 to 8.
Indianapolis	4 to 8 and manual training high school.
Lafayette	1 to 3.
La Porte	Primary.
Marion	1 to 8.
New Albany	1 and 2.
Princeton	1 to 8.
Richmond	Do.
Seymour	1 to 3.
South Bend	7 and 8.
Terre Haute	1 to 8.
Whiting	5 to 12.
IOWA.	
Boone	1 to 3.
Clinton	High school.
Council Bluffs	1 to 8.
Davenport	9 and high school.
Dubuque	High school.
Grinnell	3 to 8.
Iowa City	5 to 10.
Keokuk	1 to 4.
Marshalltown	9 to 7.
Mason City	Sixth.
Oskaloosa	Primary.
Missouri Valley	High school.
Waterloo	1 to 5.

TABLE 2.—*Cities in which manual training (other than drawing) was given in the public schools, 1903–4*—Continued.

Cities.	Grades in which manual training was given.
KANSAS.	
Atchison	8 and high school.
Emporia	6 to 8.
Fort Scott	High school.
Lawrence	1 to 8.
Parsons	High school.
Pittsburg	1 to 8.
Topeka	4 to 8.
Wichita	High school.
Winfield	1 to 6.
KENTUCKY.	
Frankfort	High school.
Henderson	1 to 12.
Louisville	High school.
LOUISIANA.	
Crowley	1 and 2.
Shreveport	1 to 8.
MAINE.	
Bangor	4 to 9.
Bath	6 to 9 and 3 years in high school.
Lewiston	5 to 9.
Portland	7 to 10.
Westbrook	7 to 9.
MARYLAND.	
Annapolis	4 to 10.
Baltimore	1 to 8.
Cambridge	7 to 10.
Cumberland	Do.
Frostburg	1 to 5.
Salisbury	1 to 10.
MASSACHUSETTS.	
Adams	5 to 7.
Andover	1 to 9.
Arlington	7 to 10.
Barnstable	8 and 9.
Belmont	7 to 9.
Beverly	1 to 8.
Boston	4 to 9.
Braintree	5 to 8.
Bridgewater	6 to 9.
Brockton	High school.
Brookline	1 to 8.
Cambridge	Grammar and high schools.
Chelsea	1 to 8.
Concord	6 to 9.
Dedham	4 to 3.
Easton	7.
Everett	5 to 9.
Fall River	High school.
Fitchburg	8 to 12.
Framingham	Normal practice school (7 to 9).
Greenfield	2 to 9.
Haverhill	8 to 9 and high school.
Holyoke	High school.
Hydepark	1 to 8.
Lawrence	High school.
Lexington	1 to 9.
Lowell	4 to 8 and high school.
Lynn	8, grammar and high school.
Malden	9, grammar and high school.
Marlboro	1 to 8.
Medford	6 to 9.
Melrose	5 to 9.
Milton	1 to 8.
Natick	7 to 13.
Needham	1 to 6.
New Bedford	3 to 9.
MASSACHUSETTS—continued.	
Newton	4 to 9.
Norwood	5 and 6.
North Adams	7 to 9.
Northampton	5 to 7.
Plymouth	6 to 9.
Quincy	5 to 8.
Reading	6 to 8.
Salem	Grammar.
Somerville	High school.
Springfield	5 to 9.
Taunton	8 to 9.
Wakefield	5 to 9.
Waltham	7 to 13.
Watertown	6 to 8.
Wellesley	1 to 8.
Westfield	6 to 8.
Williamstown	4 to 8.
Winchendon	7 and 8.
Winchester	6 to 9.
Worcester	8 and 9.
MICHIGAN.	
Albion	1 to 8.
Ann Arbor	Do.
Battlecreek	4 to 8 and high school.
Bay City	9 and 10.
Calumet	5 to 4 and high school.
Charlotte	1 to 6.
Delray	7 and 8.
Detroit	4 to 8.
Flint	7 and 8.
Grand Rapids	5 to 8.
Hillsdale	1 to 8.
Iron Mountain	7 to 11.
Ishpeming	7 to 12.
Kalamazoo	1 to 12.
Lansing	1 to 8.
Menominee	5 to 12.
Muskegon	1 to 8.
Saginaw (East)	5 to 8.
Saginaw (West)	1 to 8.
Sault Ste. Marie	3 to 12.
Traverse City	1 to 8.
Ypsilanti	Do.
MINNESOTA.	
Duluth	High school.
Faribault	Do.
Mankato	Eighth and high school.
Minneapolis	7 to 8 and high school.

CHAPTER XXXI.

COMMERCIAL AND BUSINESS SCHOOLS.

Reports to this Bureau from 4,602 different institutions show that for the scholastic year 1903–4 there were enrolled 250,231 students in business or commercial studies. This was an increase of 6,710 over the preceding year. The regular business schools had an enrollment of 138,363, the public high schools had 85,313 in business studies, the private high schools and academies had 13,479, the normal schools 3,255, and the universities 9,821 students in commercial branches.

The following summary shows the fluctuations in enrollment of business students each year since 1890:

Students pursuing commercial studies.

Scholastic year.	In institutions not distinctly business schools.				Total.	In commercial and business schools.	Aggregate of students in commercial studies.
	Universities and colleges.	Normal schools.	Private high schools and academies.	Public high schools.			
1889-90					24,994	78,920	103,914
1890-91					36,564	81,898	118,462
1891-92					27,254	77,856	105,110
1892-93					30,892	99,654	130,546
1893-94	7,300	7,771	4,466	15,220	34,757	115,748	150,505
1894-95	4,577	5,293	8,819	25,539	44,228	96,135	140,363
1895-96	5,678	5,375	9,889	30,330	51,272	80,662	131,934
1896-97	5,056	6,297	11,574	33,075	56,002	77,746	133,748
1897-98	5,869	5,721	9,740	31,633	52,963	70,950	123,913
1898-99	6,463	6,126	10,609	38,134	61,332	70,186	131,518
1899-1900	7,953	6,657	15,649	68,890	99,149	91,549	190,698
1900-1901	8,610	7,099	16,281	84,412	116,402	110,031	226,433
1901-2	9,207	1,065	16,384	76,794	103,450	137,247	240,697
1902-3	8,179	2,701	15,455	79,207	105,542	137,979	243,521
1903-4	9,821	3,255	13,479	85,313	111,868	138,363	250,231

The commercial and business schools had an increase of only 384 in enrollment over 1902–3, the public high schools had an increase of 6,106, the private high schools a decrease of 1,976, the normal schools an increase of 554, and the universities and colleges an increase of 1,642 students in business or commercial studies.

The distribution of business students by sex among the five different classes of institutions giving business instruction is shown in the following summary for the past two years:

Classes of institutions.	1902–3.				1903–4.			
	Number of schools.	Male.	Female.	Total.	Number of schools.	Male.	Female.	Total.
Universities and colleges	170	6,168	2,011	8,179	166	7,056	2,765	9,821
Public and private normal schools	50	1,434	1,267	2,701	52	1,693	1,562	3,255
Private high schools and academies	978	9,462	5,993	15,455	693	8,228	5,251	13,479
Public high schools	3,673	36,320	42,887	79,207	3,192	39,464	45,849	85,313
Commercial and business schools	516	79,175	58,804	137,979	499	80,596	57,767	138,363
Total	5,387	132,559	110,962	243,521	4,602	137,037	113,194	250,231

Table 1 shows the number of institutions in each State in which commercial studies were taught in 1903–4. Tables 2 and 3 show the distribution of such students among universities and colleges, normal schools, public and private high schools.

The statistics of the 499 regular business schools reporting to this office in 1904 are summarized in Tables 4, 5, and 6, while information concerning each school is given in Table 11.

Tables 7 and 8 show the number of public high schools in each State offering business courses and the number reporting enrollment of students in bookkeeping, commercial geography, and commercial law, and the number of students in each of these branches. Tables 9 and 10 give similar statistics for private high schools.

TABLE 1.—*Number of institutions of all grades in which commercial and business studies were taught, and number of students in such studies in 1903–4.*

In the sixteen former slave States and the District of Columbia there are separate schools for the whites and negroes. It is estimated that at the present time about 20 per cent of the public school funds in the South is for the support of schools for the negroes. For the year 1903–4 the sum of $43,653,647 was expended for the schools of both races. The table which follows shows the common school enrollment in the South, separate as to race, each year since 1877. The annual expenditure for the schools for both races since 1870 is shown in the same table. The public school expenditure for the entire South since 1870 has aggregated $771,840,721. It is estimated that at least $140,000,000 of this sum has been expended to support common schools for the colored race.

TABLE 1.—*Sixteen former slave States and the District of Columbia.*

Table 2 exhibits by States the comparative statistics of the common schools for both races for the year ending June, 1904. The totals for the South are compared with like items for the year 1889–90.

Public high schools for negroes are included in this table and their statistics are also given separately in Tables 3, 4, 5, and 6. There were 131 of these high schools in 1904 as compared with 123 the preceding year, the enrollment of secondary students being 7,092 as compared with 6,623 the year before. Tables 7 to 12 summarize the statistics of private institutions devoted to the secondary and higher education of the negro race, Tables 14 and 15 giving in detail the statistics of these private schools so far as it was possible for this Bureau to obtain the information. A number of schools failed to respond to repeated requests for statistics.

TABLE 2.—*Common school statistics of the South, 1903–4.*

State.	Estimated number of persons 5 to 18 years of age.		Percentage of the whole.		Persons enrolled in public schools.		Per cent of persons 5 to 18 years enrolled.

CHAPTER XXXIV.

STATISTICS OF REFORM SCHOOLS.

This chapter presents the statistics of 95 reform schools for the year 1903–4. In many of the States juvenile reformatories are known as State industrial schools. In this report they are classed as industrial and reform schools. In nearly all cases the inmates have been committed in pursuance of State laws.

The 95 industrial and reform schools had 707 teachers for the instruction of 33,871 pupils. Only 1,263 of the inmates were not under school instruction, the total number of inmates being 35,134. There were 29,805 males and only 5,329 females. There were 25,839 inmates learning useful trades.

Tables 1 and 2 on the following pages give by States the summarized statistics of industrial and reform schools. The commitments for the year numbered 12,386 and the discharges 11,038. Of the inmates, there were 23,716 white and 4,001 colored, so far as reported. So far as known, 13,597 were children of native parents and 7,225 children of foreign-born parents. Of the inmates committed, 2,851 could only read and 1,840 could neither read nor write. There were 2,119 assistants caring for the inmates. So far as reported, the value of grounds and buildings occupied by these institutions aggregated $24,669,915. Of expenditures for the year the sum of $886,097 was for buildings and improvements and $4,993,964 for support.

There were 34 of the 95 schools in the North Atlantic Division. These schools had 354 teachers and 14,856 pupils. There were 15,671 inmates, 13,881 males and 1,790 females, 12,645 of the total number receiving industrial training. The value of grounds and buildings was $12,843,490, or nearly one-half the value of all the property occupied by reformatories in the United States. The expenditure for buildings and improvements was $474,144, and for support $2,483,787.

The South Atlantic Division had 18 reformatories, with only 69 teachers. There were 199 assistants caring for inmates, and these assistants must have done some part of the teaching. In these schools 2,043 of the 3,138 inmates were learning useful trades. So far as reported, 1,998 of the inmates belonged to white schools and 1,040 to negro schools. The value of grounds and buildings was $2,186,500. Expenditures on buildings amounted to $37,141, while $334,209 was expended for support.

The South Central Division reported only 4 reform schools, with 16 teachers and 1,135 pupils. The institutions had 1,135 inmates, only 563 being taught useful trades. In white reformatories there were 707 inmates, and in negro schools 318. The value of grounds and buildings was $366,000. For improvements there was an expenditure of only $700, and for support $93,909.

In the North Central Division there were 31 reformatories, with 234 teachers and 13,219 pupils. There were 13,646 inmates, 10,767 males and 2,879 females. Of the inmates, 9,605 were receiving training in useful trades. The 31 schools occupied property valued at $8,450,396, upon which $315,467 had been expended during the year. The expenditure for support was $1,788,755.

The Western Division had 8 reform schools, with 34 teachers and 1,541 pupils. There were 1,544 inmates, 1,452 males and 92 females. The number taught useful trades was 973. The institutions occupied property valued at $823,529. Buildings and improvements cost $58,645, while $293,304 was expended for the support of these institutions.

CHAPTER XXXV.

SCHOOLS FOR THE DEFECTIVE CLASSES.

Statistics of schools for the blind, schools for the deaf, and schools for the feeble-minded are given in this chapter.

Schools for the blind.—The 39 schools reporting employed 492 teachers—171 men and 321 women. There were 162 teachers of music and 135 instructors in industrial departments. In the 39 institutions there were 4,236 pupils—2,304 males and 1,932 females. The number studying vocal music was 2,016; instrumental music, 2,338. There were 429 children in the kindergarten and 2,684 in the industrial departments. The schools had 135 graduates in 1904. The libraries had 121,082 volumes, the value of scientific apparatus was $115,607, and the value of grounds and buildings $7,080,020, on which $199,295 was expended during the year. For salaries and other expenditures the aggregate was $961,545. These items are given by States in Tables 1, 2, and 3 of this chapter, while the statistics of the schools will be found in detail in Table 4.

Schools for the deaf.—This chapter gives statistics of 137 schools for the deaf, 57 State institutions, 64 public day schools, and 16 private day schools, with an aggregate enrollment of 12,267 pupils. The 57 State institutions report 1,166 teachers—386 men and 780 women, instructing 10,778 pupils—5,909 males and 4,869 females. These statistics are given by States in Tables 5 and 6. The number of pupils taught by the purely oral method was 4,460, by the manual method 3,272, and by the combined system 5,330. There were 677 pupils in the kindergartens, and the institutions had 232 graduates. Table 7 shows that the school libraries had 116,587 volumes. The value of scientific apparatus was $19,780, and the value of grounds and buildings, $12,892,637. Expenditures on grounds and buildings amounted to $472,044, the aggregate for salaries and other expenses being $2,422,769.

In the 64 public day schools for the deaf there were 135 teachers and an enrollment of 982 pupils—522 males and 460 females. The 16 private day schools had 85 teachers and 507 pupils—227 males and 280 females. The statistics of these public and private day schools will be found summarized in Table 8. Table 9 gives in detail the statistics of State schools for the deaf. Tables 10 and 11 give similar information concerning public and private day schools for the deaf. Table 12 indicates the branches of manual and industrial training taught in the State schools for the deaf.

Schools for the feeble-minded.—Table 13 summarizes the statistics of the 25 State schools and the 17 private schools for the feeble-minded. In the State institutions there were 14,897 pupils—7,976 males and 6,921 females, taught by 292 instructors. There were 1,182 assistants caring for the inmates. In the private institutions the enrollment was 698 pupils—406 males and 292 females, taught by 90 instructors. The State institutions cost $2,179,028 for maintenance for the year. Tables 14 and 15 give in detail the statistics of the institutions for the feeble-minded. Table 16 shows the branches of manual and industrial training in the public institutions.

CHAPTER XXXVI.

REPORT ON EDUCATION IN ALASKA.

DEPARTMENT OF THE INTERIOR,
BUREAU OF EDUCATION, ALASKA DIVISION,
Washington, D. C., June 30, 1904.

SIR: I have the honor to submit my nineteenth annual report as United States general agent of education in Alaska for the fiscal year ending June 30, 1904.

During the school year, outside of incorporated towns, there have been maintained 35 public schools with 38 teachers and an enrollment of 2,257 pupils.

The schools are distributed as follows:

SOUTHEAST ALASKA.

Gravina.—Miss Ina Walton, teacher; enrollment, 50; population, native.

The school here was opened February 1, 1904. The teacher found the Indian children remarkably bright. They memorize rapidly and their memory is retentive. However, their reasoning powers are not well developed and they find it very hard to solve problems. The one discouraging part of the work at Gravina was the lack of interest on the part of the parents. The children were often detained at home for very poor reasons. When the nice weather set in, being very fond of fishing and their parents not objecting in the least, many of them went fishing instead of to school. The school term was brought to a very abrupt ending by the destruction of Gravina by fire. The town consisted of a sawmill and adjacent buildings. They having been burned down, the people moved away and the town of Gravina became a thing of the past.

Haines.—Miss G. Mackintosh, teacher; enrollment, 53; population, natives.

No descriptive report.

Hoonah.—Mrs. J. W. McFarland, teacher; enrollment, 100; population, Thlinget.

This is the end of Mrs. McFarland's twenty-fifth year of school work in Alaska. She writes as follows concerning the great change wrought by education and Christian civilization upon the people of Hoonah: "I see a great improvement in the village since my arrival, September 19, 1884. Every house has been rebuilt and many new ones erected. A substantial board walk runs nearly the whole length of the town. The people are no longer clad in blankets and skins, wearing ear and nose jewels, but clothed in the best of American garments." The school this term was very encouraging, good progress being made by those attending with any degree of regularity. One girl only missed a half day during the year. The Hoonah Fish Company operated a halibut industry here this winter, which gave employment to quite a number of young men, thus breaking up the advanced classes. Others got married and left school. School was held regularly until May 10, when Doctor Cole, of the revenue cutter *Rush*, came to investigate a rumor that smallpox was to be found at Hoonah. Doctor Cole found four people sick and pronounced the cases varioloid. Following his directions, school had to be closed for the rest of the year.

Jackson.—Miss Jessie Evans, teacher; enrollment, 53; population, Hydah.

The daily attendance was very good during the winter until the beginning of March, when almost the whole population moved away to the hunting and trapping grounds, and by June all the people left for their summer's work. There is no established industry

CHAPTER XXXVI.

REPORT ON EDUCATION IN ALASKA.

DEPARTMENT OF THE INTERIOR,
BUREAU OF EDUCATION, ALASKA DIVISION,
Washington, D. C., June 30, 1904.

SIR: I have the honor to submit my nineteenth annual report as United States general agent of education in Alaska for the fiscal year ending June 30, 1904.

During the school year, outside of incorporated towns, there have been maintained 35 public schools with 38 teachers and an enrollment of 2,257 pupils.

The schools are distributed as follows:

SOUTHEAST ALASKA.

Gravina.—Miss Ina Walton, teacher; enrollment, 50; population, native.

The school here was opened February 1, 1904. The teacher found the Indian children remarkably bright. They memorize rapidly and their memory is retentive. However, their reasoning powers are not well developed and they find it very hard to solve problems. The one discouraging part of the work at Gravina was the lack of interest on the part of the parents. The children were often detained at home for very poor reasons. When the nice weather set in, being very fond of fishing and their parents not objecting in the least, many of them went fishing instead of to school. The school term was brought to a very abrupt ending by the destruction of Gravina by fire. The town consisted of a sawmill and adjacent buildings. They having been burned down, the people moved away and the town of Gravina became a thing of the past.

Haines.—Miss G. Mackintosh, teacher; enrollment, 53; population, natives.

No descriptive report.

Hoonah.—Mrs. J. W. McFarland, teacher; enrollment, 100; population, Thlinget.

This is the end of Mrs. McFarland's twenty-fifth year of school work in Alaska. She writes as follows concerning the great change wrought by education and Christian civilization upon the people of Hoonah: "I see a great improvement in the village since my arrival, September 19, 1884. Every house has been rebuilt and many new ones erected. A substantial board walk runs nearly the whole length of the town. The people are no longer clad in blankets and skins, wearing ear and nose jewels, but clothed in the best of American garments." The school this term was very encouraging, good progress being made by those attending with any degree of regularity. One girl only missed a half day during the year. The Hoonah Fish Company operated a halibut industry here this winter, which gave employment to quite a number of young men, thus breaking up the advanced classes. Others got married and left school. School was held regularly until May 10, when Doctor Cole, of the revenue cutter *Rush*, came to investigate a rumor that smallpox was to be found at Hoonah. Doctor Cole found four people sick and pronounced the cases varioloid. Following his directions, school had to be closed for the rest of the year.

Jackson.—Miss Jessie Evans, teacher; enrollment, 53; population, Hydah.

The daily attendance was very good during the winter until the beginning of March, when almost the whole population moved away to the hunting and trapping grounds, and by June all the people left for their summer's work. There is no established industry

Digitized by Google

at Jackson, so the natives must seek employment elsewhere. Some of the men engage themselves as pilots and some as engineers on the cannery steamboats. These men all receive very good salaries during the summer. Others travel about and make canoes, salt halibut, dry fish, eggs, etc. The school year passed without any interruption by sickness and but 3 pupils were permanently taken off the roll—2 by death and 1 girl by marriage.

Kake.—Mrs. Anna R. Moon, teacher; enrollment, 95; population, Thlinget.

The morning sessions were devoted to regular school work, while the afternoons were given to sewing and gardening. The general interest shown in school work by both parents and children was very gratifying to the teacher. Charlie Gunnok, the native policeman, contributed very efficiently to the attendance of the children. Mrs. Moon says that during the year almost every family came and asked her for a "moon book"—a calendar.

Kassan.—Arch R. Law, teacher; enrollment, 39; population, natives. No report.

Killisnoo.—Mrs. C. Kilborn, teacher; enrollment, 100; population, natives. No report.

Klawock.—Miss Eva V. Culp, teacher; enrollment, 48; population, Thlinget.

The Alaskan parents have not yet recognized the fact that young children are not strong enough for hard work, but should spend their time in learning. With them hunting and fishing are largely family affairs, and all the members of the household are made to take some part in the procuring and preserving of the food supply. This is the great trouble that the teachers have, for as soon as the fishing season begins the parents take their children out of school. However, we are glad to hear from the teacher at Klawock that some of the parents have begun to show greater appreciation of the school's work. Some have even left their children with friends while they went off on hunting expeditions, that they might not miss any school.

Klinquan.—Samuel G. Davis, teacher; enrollment, 36; population, Hydah.

The native children are bright and willing to learn, but owing to their irregular attendance they do not make as rapid progress as the others. Those who stay in the village the year round are quite regular, but most of the native people at this village are on the move the greater part of the time. They have their seasons for hunting, fishing, and feasting for the dead, all of which tend to keep the children out of school the greater part of the year. In dress and personal habits the children are reasonably neat, but their homes most decidedly lack cleanliness. The teacher's greatest difficulty is to make the children speak English outside of the schoolroom. When we remember the strict rules and penalties enforced by the English schoolmaster of many years ago to compel his pupils to speak Latin on the playground, we can perhaps partly appreciate the difficulty Mr. Davis encounters in endeavoring to make his native pupils give up their mother tongue.

Kluckwan.—F. R. Falconer, teacher; enrollment, 45; population, natives. No detailed report.

Saxman.—Miss Selma U. Peterson, teacher; enrollment, 55; population, natives.

At the commencement of the term none of the Thlingets had returned, so until the latter part of November school was not well attended. However, every effort was used by the teacher to increase interest and for the rest of the year the attendance was good. Just before and after the holidays several dinner parties given by the natives kept the children out of school. The new books sent to Saxman this year seemed to have a good effect, considerable progress in their use being made during the year. The sewing class in the evening proved very popular. The discouraging feature of the work at Saxman is the continued coming and going of the natives from village to village.

Sitka No. 1 (white).—Grant Smith and Miss Constance Stowell, teachers; enrollment, 69; population, whites.

Special attention was paid during the year to habits of neatness and accuracy in all written work. As a great number of the pupils were from the States, the regular grade system in use in Oregon was followed. An exhibit of the work prepared for the World's Fair at St. Louis was held on the second Friday in March. The patrons of the school showed great interest in the exhibit and nearly all viewed the work. A striking feature of the exhibit was the relief maps done in crayon and papier-maché.

Digitized by Google

Sitka No. 2.—Miss C. J. Stowell, teacher; enrollment, 110; population, natives. No report.

Yakutat.—Albin Johnson, teacher; enrollment, 120; population, Thlinget.

Mr. Johnson seems to have found a way to make his pupils come to school regularly. He says that the parents are very careless about their children attending school, and the children, feeling no constraint, come just when it pleases them. Therefore Mr. Johnson soon made it a habit to go through the native village early every morning and find the children and bring them to the schoolroom. The natives here are by no means poor and therefore have no reason for keeping their children out of school.

WESTERN ALASKA.

Afognak.—Mrs. Charles W. Pajoman, teacher; enrollment, 34; population, Aleut and Creole.

Playing "hookie" seems to be a favorite employment with the children at Afognak, as their teacher writes. She accounts for this by the fact that parental authority is completely lacking. Early in November the United States marshal came over and gave them a good "rousing up," and for a while the attendance was quite regular. But soon after he had left the reign of compulsory education was over. During the year one of the former pupils of the school was married, and just after her wedding came to thank Mrs. Pajoman for all she had done for her.

Copper Center.—Mrs. G. S. Clevenger, teacher; enrollment, 40; population, natives. No report.

Ellamar.—Miss Ann Mann, teacher; enrollment, 17; population, whites.

On November 1 the new school building was ready for use and regular work was begun. The plan of written monthly reports was adopted and found successful. On all of the holidays a short morning session was held, consisting of a literary programme and other exercises appropriate to the day. School closed on July 29, with very satisfactory results in all final examinations.

Kodiak.—Miss Clara Gwin, teacher; enrollment, 75; population, whites and Creoles.

Formerly great trouble was experienced here, as elsewhere in Alaska, in making the children use English outside of the school room. However, the teacher reports that some of the parents are at last beginning to see the great benefit their children derive from an ability to converse in English, and have begun to encourage its use in their homes. Great difficulty is found in making the children understand the simplest words in their readers, because the text-books in use do not deal with objects in nature with which they are acquainted.

Unalaska.—William A. Davis, teacher; enrollment, 90; population, white and native.

Night classes were held for ten months. Young men who were unable to attend day school thus received instruction in arithmetic, bookkeeping, and spelling. The winter was an exceptionally long one. Snow fell on the 8th of October, and until June there were but few bright days. Mr. Davis says: "We have had a very satisfactory school year. The health of the people has been good, the attendance in advance of preceding years, and I think the results of our work excellent."

Unga.—Ray H. Wisecarver, teacher; enrollment, 22; population, white and mixed bloods. No report.

Wood Island.—Charles F. Mills, teacher; enrollment, 43; population, Aleuts and Creoles.

Most of the pupils attending this school belong to the Baptist Orphanage, and are therefore well fed and clothed and attend regularly. It may be of interest to note the physical condition of the school children: Fifteen were afflicted with various defects of vision; nine were deficient in hearing; enlarged tonsils and various forms of throat trouble were frequent among them. They are all of affectionate disposition and are not quarrelsome. They make good progress in reading, and most of them learn to write quite neatly. Spelling and arithmetic, as seems to be generally the case with the native children, are very difficult

Digitized by Google

branches for them to master. However, if the Alaska children find it difficult to master these practical branches, they seem to have little trouble with the finer arts. Music and drawing are taken up by them with enthusiasm, and they seem to have a gift for both. Mrs. Mills has been the teacher of music and drawing, and it was her own deep interest in the work which led her to add these two studies to the curriculum.

NORTHERN ALASKA.

Bethel.—Joseph Weinlick, teacher; enrollment, 30; population, Eskimo.

The majority of the pupils live at the mission, hence their attendance is regular. The teacher has observed that Eskimo children below the age of 12 are very slow in learning, while those who enter school after that age learn more in one year than those who entered two years earlier. They make excellent progress in reading and writing, and their pronunciation is very good considering that they have never heard English spoken before entering school. Mr. Weinlick writes: "It is very difficult for them to pronounce the letters 'r,' 'l,' 'e,' and 'g.' For 'Robert' they say 'Lobert,' and they pronounce the letter 'l' 'hell.'" It is very hard to get them to speak English. When they are spoken to they invariably answer in their own tongue. For several years the teacher has endeavored to teach them arithmetic, but with little result. However, for the first time this year he was delighted to see them make a little progress in addition, subtraction, and multiplication, but division is yet a mystery to them. By the beginning of April the majority of the pupils went with their parents to the different hunting grounds, and those who remained at the mission were engaged in fishing, gardening, and working in the sawmill.

Carmel.—Mrs. E. H. Rock, teacher; enrollment, 23; population, natives. No report.

Council City.—Mrs. B. S. Macdonald, teacher; enrollment, 40; population, natives. No report.

Golofnin.—Mrs. O. P. Anderson, teacher; enrollment, 61; population, Eskimo.

Thirty-five of these children are cared for at the "Home" by the Swedish Evangelical Union Mission. The parents of children living in the vicinity have noticed that the children at the Home are well fed and clothed, and what a change for the better education has made for them. Hence, many of them, even from other villages, have come out and begged that their children might be cared for also at the Home during the school term, but for lack of food and clothing they have been compelled to refuse many children its privileges of home and school training. "It would help much toward the civilization of Alaska if funds could be raised to support the native children in one place during the school year. Then when summer came, they could go off hunting and fishing with their parents."

Koserefsky No. 1.—A. J. Markham, teacher; enrollment, 29; population, natives.

The past year was a very happy and successful one, although the grippe claimed several victims during the school term. The children were very eager to learn. They particularly appreciated the fine physiological charts sent up for their use, which served greatly to increase interest in that study. Their English is improving, thanks to the rules of the school, which allow no Indian to be spoken except on picnic days. Thus even the new pupils begin very soon to speak English, although in a somewhat broken fashion.

Koserefsky No. 2.—Miss Mary Winifred, teacher; enrollment, 81; population, Creole, native, and Eskimo.

This boarding school for girls is doing a remarkable work among the inhabitants of the Yukon Valley. Besides their regular class work, the girls are taught to make their own clothing, to sew on the machine, to do fancy work, and to raise vegetables. A number of the old pupils are now supporting their families by needlework. While at the school they are taught to eat vegetables (something they never tasted at their homes), and so when they return to their families they start small gardens. As a result the Indians in the vicinity are becoming quite fond of vegetables. One of the pupils on revisiting

Digitized by Google

the school remarked: "It is hard to live at home. We never have any potatoes nor cabbage." A great drawback is the fact that the Indians, having never been in the least degree tillers of the soil, have not even the most primitive sort of agricultural implements. Early in June the children began to prepare a great celebration for the Fourth of July. "They are becoming more and more national every year." Miss Winifred says: "I have spent thirteen years here among the natives trying to make their lives happier and better. I brought no return ticket with me, nor do I ever intend to return to my native land."

Kotzebue.—Mrs. Otha Thomas, teacher; enrollment, 130; population, natives.

Owing to the fact that during April and May, the last months of the legal school year, most of the natives were away on sealing trips, the Commissioner of Education authorized the teacher to hold school during July and August instead of in April and May. By this means scores of natives are given instruction who would otherwise be absent most of the school year. The children eagerly took advantage of this opportunity, and many of them did not miss a single day during their stay in the village. Some would walk several miles every day from their parents' tents to the school. The progress made by certain ones was remarkable. "Lads who at the first lesson did not know their letters, at the end of two months read quite fluently in the first reader and wrote more legibly than the average white man in this country." During the winter one of these particularly bright lads, who lived at a point about 225 miles distant from Kotzebue, took a number of old books from the school and taught his smaller friends their letters. This fact needs no comment, it speaks for itself. Winter set in very early this year, zero weather being experienced in October. As the people had not yet laid in their winter supply of wood many of the scholars had to stay out of school and take dog teams to collect driftwood. The entire female population of the village was given instruction in practical needlework. The older women knit stockings, the younger make dresses, and those from 6 to 16 are taught to crochet hoods and scarfs. On Friday evenings during the winter the entire village assembled in the big school room to listen to talks on hygiene, illustrated by charts showing the effect of alcohol and tobacco on the system. The results of poor ventilation, etc., were also represented. "As a result the natives are freer from superstition and in far better health than before. They now understand something of the causes of diseases and do not attribute them to evil spirits. They are also far more cleanly in person, dress, and habits."

Quartz Creek.—Letitia B. Hayes, teacher; enrollment, 51; population, native. No detailed report.

Quinhagak.—J. H. Schoechert, teacher; enrollment, 23; population, native. No detailed report.

St. Michael.—Franklin Moses, teacher; enrollment, 55; population, native. No detailed report.

Teller Reindeer Station.—T. L. Brevig, teacher; enrollment, 20; population, native. No detailed report.

Unalakleet.—Miss A. Omegitjoak (native), teacher; enrollment, 134.

Wales.—O. T. Rognon, teacher; enrollment, 121; population, native.

The dancing in the early part of the winter and the hunting in spring kept the attendance down. The teacher had to offer prizes and other inducements to the children to offset the influence of their parents, who, besides exerting no influence to keep the children in school frequently compelled them to stay out to attend their heathen dances. The old people seemed determined that the younger generation should continue their old superstitious beliefs. However, many of the children are beginning to laugh at the old folks as they go through their nonsensical ceremonies. Mr. Rognon gives it as his experience that the great problem in the education of the Eskimos is to counteract the influence of the older natives who still cling to their old heathen customs. A fair was held in April, at which all kinds of work were exhibited, from a hunting outfit to a doll's clothing. Mr. Thomas Illayok, the native assistant and interpreter, deserves his share of the credit for the success of the school.

LICENSE FUND.

The Fifty-seventh Congress in its second session passed an act approved March 2, 1903, by which the entire 50 per cent of license fees collected from unincorporated towns in Alaska is paid into the United States Treasury for the use of the Secretary of the Interior in carrying on schools in the unincorporated sections of Alaska.

Under this new legislation the 50 per cent of the license fees collected during the first nine months of the fiscal year 1904 amounted to $35,482.01, and after the opening of the spring communication with northern Alaska $67,895.29 was received at the Treasury Department and transferred to the credit of the Secretary of the Interior for school purposes.

This unexpectedly large sum received so near the close of the fiscal year enabled the Alaska school fund to close the year free from debt, and also to arrange for the opening of schools at the beginning of the next school year at a number of places that have made urgent and repeated requests for schools, which hitherto this Bureau has been unable to grant, because of the inadequacy of the funds at its disposal. The new schools proposed to be opened in the fall of 1904 are Wainwright and Deering, arctic Alaska; Nulato, Rampart, and Fort Yukon, in the valley of the Yukon River, and Bettles, on the Koyukuk River, the largest of the northern tributaries of the Yukon; Bethel No. 2, Ougavig, and Nushagak, in southwestern Alaska; Chignik, on the south shore of the Alaska Peninsula; Seldovia, Kenai, and Hope, on Cook Inlet; Seward, on the east coast of Kenai Peninsula; Haines No. 2, Lee Harbor, Petersburg, and Shakun, in southeastern Alaska. The expense of these new schools will be included in the current year's expenditure.

New school buildings are in process of erection at Point Barrow, Wainwright, and Kotzebue, arctic Alaska; Wales and St. Michael, on Bering Sea; and Copper Center, 105 miles north of Valdes, on Prince William Sound.

At Bettles a log house was purchased and made over into a school building and teacher's residence.

The following table shows the history of Congressional appropriations for education in Alaska:

First grant to establish schools, 1884	$25,000.00	Annual grants, school year—Continued. 1893–94	$30,000.00
Annual grants, school year— 1886–87	15,000.00	1894–95	30,000.00
1887–88	25,000.00	1895–96	30,000.00
1888–89	40,000.00	1896–97	30,000.00
1889–90	50,000.00	1897–98	30,000.00
1890–91	50,000.00	1898–99	30,000.00
1891–92	50,000.00	1899–1900	30,000.00
1892–93	40,000.00	1900–1901	30,000.00

Amounts received from one-half of license fees collected outside of incorporated towns in Alaska:

From— March 3, 1901, to June 30, 1902 (16 months)	$35,882.41	From— July 1, 1903, to June 30, 1904	$103,377.30
July 1, 1902, to June 30, 1903	19,742.62		

Expenditure for education outside of incorporated towns, Alaska, 1903–4.

Salaries, 4 officials	$4,885.42	Traveling expenses	$1,746.51
Salaries, 38 teachers	22,203.42	Freight	2,345.52
Supplies	6,518.17	Printing reports, etc	180.93
Repairs	1,487.28	Office expenses	156.41
Erection of buildings	14,156.49	Total	55,743.45
Fuel	1,923.30		
Rents	140.00

TABLE 3.—*Reindeer sold, butchered, or died, 1892 to 1904.*

[When the slaughter of deer is spoken of it in no case refers to the Government deer, but only to the deer which are in the possession of stations and apprentices, the same being the increase of the herds loaned to them. The Government deer loaned to the missions or to the Lapland herdsmen have to be returned deer for deer as loaned to them, and no one slaughters Government deer or gives them away. Male deer may be slaughtered or sold by the apprentices only with the advice and consent of the superintendent at the reindeer station. It has been understood that the superfluous males belonging to the station may be sold.]

Year.	Number.	Year.	Number.
1892	28	1899	299

TABLE 5.—*Reindeer loaned.*

[Table 5 shows the number of deer that have been loaned from time to time. The station at Wales received 118 deer in August, 1894, the same being deer that were purchased out of a fund of $2,146 contributed by friends of the experiment in May and June, 1891, before the Congressional appropriations began. (See p. lx of the report of this Bureau for 1903.)

The 5 Laplanders named in this table (marked with an asterisk) were brought over by the War Department in 1898 to assist in driving a herd of reindeer to the Yukon Valley, where American miners were reported to be in danger of starvation. After the disbanding of the expedition this office, under advice, took them into its employ to teach the Eskimo apprentices the industries connected with reindeer herding. As a return for their service they each received a loan of 100 deer for five years.]

COMPULSORY ATTENDANCE AND CHILD-LABOR LAWS.

Many changes have been made in the laws regulating compulsory school attendance and the employment of children since the publication of the Commissioner's Report of 1903. Most of these changes were made in the year 1905, but are incorporated in the present Report (1904) in order to present the latest phase of legislation dealing with the subjects in question.

As regards compulsory education the most noteworthy event has been the enactment of a compulsory school law for Missouri; this State is the third one of the former slave States to compel school attendance, the other two being Kentucky and West Virginia. In addition, Maryland, North Carolina, and Tennessee have compulsory school laws which are limited in their application to certain counties or cities.

Digitized by Google

The age limits of required attendance have been extended in Michigan and Utah.

The annual period of enforced attendance has been lengthened so as to embrace the entire time the schools are in session, or the full school year in California, Michigan, Minnesota, Vermont, and Washington. 25 States have now adopted this requirement.

The general trend of legislation is well to mark it in the direction of requiring every child to take the complete course of elementary instruction as given in the grades below the high school.

In the matter of child labor, 32 States, namely California, Delaware, Illinois, Kansas, Maryland, Missouri, Montana, Oregon, Pennsylvania, Rhode Island, Vermont, and West Virginia, the age limits within which labor is not permitted has been raised, or the number of forbidden employments has been increased, or the law has been otherwise strengthened. There is a tendency to make the minimum age for employment 14 years 16 in mines in the Northern States, in the Southern States, two years less. In the case of illiterates, employment during school hours is quite frequently forbidden up to the age of 16, or permitted only on condition of a certain measure of school attendance.

No attempt has been made in the table to note the provisions regulating the hours of labor of minors. Such regulations are now very general.

Many States specifically forbid, or permit only under restrictions, various occupations dangerous to the life, limb, morals, or health of children, such as the employment of children in begging, in theatrical and circus exhibitions, on dangerous machinery, in occupations requiring the handling of intoxicating liquors, night work, etc.

Statutory provisions relating to compulsory attendance and child labor.

	COMPULSORY EDUCATION.			CHILD LABOR.[a]	
State.	Age	Annual period.	Penalty on parents for neglect.	Age under which specified employments are forbidden.	Educational restrictions on child labor.
Alabama				10 years, in factories in all cases; 12, unless orphans, or children of the widowed or disabled; 12, in mines.	
Arizona	8–14	12 weeks; 6 consecutive	$5 to $25		
Arkansas				10 years, in all cases in manufacturing establishments; 12, unless to support a parent or self, as specified by law; 14, in mines; females not at all in mines.	No child under 14 may be employed in a manufacturing establishment unless he attends school 12 weeks each year and can read and write English.
California	8–14	Full term	First, not over $10 or 5 days' imprisonment; subsequent, $10 to $50, or 5 to 25 days, or both.	14 years, in any mercantile or manufacturing establishment, workshop, hotel, or as messenger, etc. Children 12 to 14, upon permit, may work if parents incapacitated or during vacation.	No minor under 16 may work for gain in school hours unless he can read and write English or attends night school.
Colorado	[b] 8–16	Full term	$5 to $25	14 years, in any underground works, mine, smelter, mill, or factory. No female may be employed in a coal mine.	Unlawful to employ children under 14 during school hours unless they have complied with the school-attendance law; under 16, unable to read and write, unless attending day or night school.
Connecticut	[c] 7–16	Full term	Not exceeding $5 each week of absence.	14 years, in any mechanical, mercantile, or manufacturing establishment.	Children under 14 may not be employed while school is in session. Children 14 to 16 can not leave school to be employed unless their education is satisfactory to the local or State school board.
Delaware				14 years, in any factory, workshop, or manufacturing establishment.	No child 14 to 16 may be so employed unless he has attended day or night school 12 weeks the preceding year.
District of Columbia.	8–14	12 weeks; 6 consecutive	Not exceeding $20		
Florida				Children under 15 may not be employed more than 60 days without consent of legal guardian.	
Idaho	8–14	12 weeks; 8 consecutive	First, not less than $5; subsequent, $10 to $50, with costs.	14 years, in mines (constitution of State).	

[a] See remarks introductory to the table.
[b] Children 14 to 16 whose labor is necessary to their own or parents' support are excused.
[c] Not applicable to children over 14 lawfully employed to labor at home or elsewhere.

Statutory provisions relating to compulsory attendance and child labor—Continued.

	COMPULSORY EDUCATION.			CHILD LABOR.	
State.	Age.	Annual period.	Penalty on parents for neglect.	Age under which specified employments are forbidden.	Educational restrictions on child labor.
Illinois	7–14	Full term, to be not less than 110 days of actual teaching.	$5 to $20 and costs; stand committed until paid. Penalty for false statements as to age or attendance, $3 to $20.	14 years, in any mercantile institution, factory, office, theater, elevator, etc., or as messenger or driver; 16, in or about any mine. No female may work in or about a mine.	No child 14 to 16 unable to read and write may be employed unless attending an evening school, if there is one. No child under 14 may be employed at any work for wages during the school term.
Indiana	a7–14	Full term	$5 to $25, and, in discretion of court, imprisonment 2 to 90 days.	14 years, in any manufacturing or mercantile establishment, mine, quarry, laundry, renovating works, bakery, or printing office. No female may work in a mine.	Children under 16, unable to read and write English, may not be employed in foregoing employments except in vacation of public schools.
Iowa	a7–14	16 consecutive weeks	$3 to $20	12 years, in mines (boys)	
Kansas	a8–15	Full term *b*	$5 to $25	14 years, in any factory or packing-house or in or about any mine.	No minor under 16, may work in a coal mine unless he can read and write and has attended school 3 months in the year.
Kentucky	7–14	8 consecutive weeks; full term in cities of first, second, third and fourth classes.	First, $5 to $20; subsequent, $10 to $50.	14 years, in any workshop, factory, or mine, without written consent of parent and county judge.	
Louisiana				12 years (boys), 14 (girls), in any factory, warehouse, or workshop.	Children under 14 may not be employed in foregoing employments, nor in clothing, dressmaking, or millinery establishments, unless they have attended school 4 months in preceding year.
Maine	7–15	Full term	Not exceeding $25, or imprisonment not exceeding 30 days.	12 years, in any manufacturing or mechanical establishment.	Children under 15 shall not be employed in any manufacturing or mechanical establishment, except during vacation, unless they have attended school 16 weeks during preceding year.
Maryland *c*	d8–12	Full term	Not exceeding $5	14 years, in mills and factories (except canning establishments), unless self, widowed mother, or invalid father solely dependent upon such employment. 19 counties exempt from law.	No minor, 12 to 16, unable to read and write English may be employed where there is an evening school unless attending that or another school.
Massachusetts	e7–14	Full term	Not exceeding $20	14 years, in factories, workshops, or mercantile establishments.	Children under 14 may not be employed at any work for wages during school hours; from 14 to 16 may not be employed in any factory, workshop, or mercantile establishment if unable to read and write.

Digitized by Google

Michigan	a7–15	Full term	Fine of $5 to $50, or imprisonment 2 to 90 days, or both.	14 years, in any manufacturing or mercantile establishment, workshop, store, office, hotel, telegraph or messenger service, etc.	Children 14 to 16, unable to read and write English, may not be employed.
Minnesota	8–18	Full term	First, $25; subsequent, $25 to $50.	14 years, in factories, workshops, or mines.	Children under 14 years may not be employed in mercantile establishments, telegraph, telephone, or public messengers companies, except during vacation; under school age (16 years), in any occupation unless they have attended school the prescribed period; under 16, unable to read and write English, in any indoor occupation (except in vacation) unless attending day or evening school.
Missouri	f8–14	Not less than ½ of term	$10 to $25, or imprisonment 2 to 10 days, or both.	14 years, in mines, manufacturing or mechanical establishments; no females in mines.	No child 8 to 14 may be employed in any way in school hours unless he has complied with the attendance law. No boy under 16 may work in a mine unless he can read and write.
Montana	f8–14	Full term; in no case less than 16 weeks.	$5 to $20	16 years, in mines or underground works.	Children under 14 not to be employed during school sessions unless they have completed the studies required by law; from 14 to 16, if unable to read and write English.
Nebraska	7–15	Two-thirds of school term; in no case less than 12 weeks.	$5 to $25 (on truant officer)	10 years, in manufacturing, mechanical, industrial, or mercantile establishments.	Foregoing employments unlawful for children under 14 (except during vacations) unless they have attended school 20 weeks the preceding year.
Nevada	8–14	16 weeks; 8 consecutive	First, $50 to $100; subsequent, $100 to $200; with costs.		
New Hampshire	g8–14	Full term	First, $10; subsequent, $20	12 years, in any manufacturing establishment.	No child under 14 may be employed during school sessions, nor under 16 if unable to read and write English. No minor unable to read and write English may be employed unless attending day or evening school, if any is held.

a Inclusive.
b 8 weeks for children over 14 who can read and write English and are at work to support themselves or others.
c The provisions tabulated for Maryland (except in fifth column) are those of the act of 1902, whose operation is limited to Baltimore city and Allegany County.
d To 16 unless regularly employed to labor at home or elsewhere.
e To 16 if wandering about public places without lawful occupation, or if unable to read and write.
f To 16 if unemployed.
g To 16 if unable to read and write English.

Statutory provisions relating to compulsory attendance and child labor —Continued.

	COMPULSORY EDUCATION.			CHILD LABOR.	
State.	Age.	Annual period.	Penalty on parents for neglect.	Age under which specified employments are forbidden.	Educational restrictions on child labor.
New Jersey	7–14	Full term	"Punishable as a disorderly person."	14 years, in factories, workshops, mills, or manufacturing establishments; also mines.	Children under 15 must have attended school 12 weeks the preceding year as a condition of employment.
New Mexico	7–14	3 months	$5 to $25, or imprisonment not exceeding 10 days.		
New York	8–16	Full term (October 1 to June 1) between ages of 8 and 14; when unemployed, between 14 and 16.	First, not exceeding $5; subsequent, not exceeding $50, or imprisonment not exceeding 30 days, or both fine and imprisonment.	14 years, in factories; if 14 to 16, the child must have attended school 130 days the preceding year, and be able to read and write English, and cipher. Similar provisions apply, in places of over 3,000 population, to work in mercantile establishments, business offices, restaurants, hotels, express or messenger service, except for children over 12 in small places during vacation.	Unlawful to employ in any business or service child under 14 during school term; 14 to 16, unless has attended 130 days preceding year, and can read and write English, and cipher, or (in first and second class cities) has completed elementary course or attends evening school 16 weeks a year. See preceding column.
North Carolina	(a)			12 years, in any factory or manufacturing establishment (does not apply to oyster canning and packing); 12 years, in mines employing over 10 men (boys).	
North Dakota	8–14	Full term	$5 to $20 (on school official)	12 years, in mines, factories, and workshops (constitution of State).	Children under 14 may not be employed in any manner during school hours unless they have attended school 12 weeks during the year.
Ohio	[b] 8–14	Full term; in no case less than 24 weeks.	$5 to $20; on default, imprisonment from 10 to 30 days.	14 years, in mines, factories, workshops, mercantile or other establishments.	No child under 14 may be employed in any other manner during school sessions; or between 14 and 16 if unable to read and write English; or in mines during school term if under 15.
Oregon	[c] 8–14	Full term	$5 to $25	14 years in any factory, store, workshop, in or about any mine, or in the telegraph, telephone, or public messenger service.	Foregoing employments forbidden to any child 14 to 16 unless attended school 160 days preceding year and can read English. No child under 14 may be employed in any work for compensation during school hours.

Digitized by Google

Pennsylvania	[d] 8–16	Full term; but the school board of each district has power to reduce this to not less than 70 per cent of the term.	First, not exceeding $2; subsequent, not exceeding $5; on default, imprisonment; first, not over 2 days; subsequent, not over 5.	14 years, in any employment, except domestic, coal mining, or farm labor; 16 years in coal mines; 14 years in or about the outside workings of coal mines; girls may not work in or about coal mines.	No child 14 to 16 may be employed unless he can read and write English and has complied with the school laws.
Rhode Island	[e] 7–15	Full term	Not exceeding $20	13 years before, 14 after Dec. 31, 1906, in any factory, manufacturing or business establishment.	Children under 13 may not be employed except during school vacations.
South Carolina				10 years after May 1, 1903; 11 after May 1, 1904; 12 after May 1, 1905, in any factory, mine, or textile establishment, except that certain self-dependent children may work in the latter.	Children may work in textile establishments in June, July, and August if they have attended school 4 months during the year and can read and write.
South Dakota	8–14	12 weeks, 8 consecutive	$10 to $20 and costs; stand committed till paid.	14 years, in mines	No child 8 to 14 to be employed during school hours unless he has attended school 12 weeks during the year.
Tennessee	[f]			14 years, in workshops, factories, or mines.	
Texas				12 years, in mills, factories, manufacturing or other establishments using machinery; 16 years, in mines, distilleries, or breweries.	Unlawful to employ children 12 to 14 who can not read and write English in mills, factories, etc., certain self-dependent children excepted.
Utah	8–16	20 weeks, 10 consecutive; in cities of the 1st and 2d class 30 weeks, 10 consecutive.	First, not exceeding $10; subsequent, not exceeding $30, with costs.	14 years, in mines (constitution of State).	
Vermont	[g] 8–15	Full term	$5 to $25	12 years, in any mill, factory, or workshop, or carrying messages.	No child under 15 may be employed in a mill, factory, or workshop, or carrying messages, during school hours; nor under 16, in any mill, factory, or workshop, unless he has attended school 28 weeks the current year.
Virginia				12 years, "in any manufacturing, mechanical, or mining operation."	
Washington	8–15	Full term	Not over $25	14 years, in mines (boys); 12 (boys), in the outside workings of a colliery; 14, in any factory, mill, workshop, or store, except (12 to 14) in specified cases of need.	Children under 15 may not be employed in manufacturing, mechanical, or mercantile establishments, or by any corporation, while the schools are in session, unless excused by the school superintendent.

[a] Four counties and the city of Washington are under special compulsory attendance laws.
[b] To 16 if unable to read and write English.
[c] To 16 if unemployed.
[d] Not applicable to children over 13 who can read and write English and are regularly employed in useful service.
[e] Not applicable to children over 13 who are lawfully employed.
[f] In 1905 a compulsory attendance act was passed applying only to Claiborne and Union counties.
[g] Children over 15 or under 8, when once enrolled, must attend the full term they are enrolled for.

Statutory provisions relating to compulsory attendance and child labor—Continued.

	COMPULSORY EDUCATION.			CHILD LABOR.	
State.	Age.	Annual period.	Penalty on parents for neglect.	Age under which specified employments are forbidden.	Educational restrictions on child labor.
West Virginia	8–14	20 weeks	First, $2; subsequent, $5	12 years, in mines, factories, workshops, mercantile or manufacturing establishments.	No child under 14 shall be so employed during school term if it hinders regular attendance.
Wisconsin	[a] 7–14	Full term; in cities, not less than 8; elsewhere not less than 5 calendar months.	$5 to $50, or imprisonment not over 3 months.	12 years, in any occupation; 14, in factories, workshops, bowling alleys, barrooms, beer gardens, mines; 14 to 16, in any occupation without specified written permit; 18, as messengers (females).	Children 12 to 14 may not be employed in any occupation, except during school vacations, by specified written permit, in stores, offices, hotels, mercantile establishments, laundries, telegraph, telephone, or public messenger service, where they reside.
Wyoming	[b] 6–21	3 months	Not exceeding $25	14 years, in mines; females may not work in mines. (Constitution.)	
United States laws (for Territories).				12 years, in the underground workings of any mine.	

[a] To 16, if not regularly and usefully employed at home or elsewhere.
[b] Penalty only for child 7 to 16, or one living idly and loitering about public places.

CONSOLIDATION OF SCHOOLS AND TRANSPORTATION OF PUPILS.

[For further information on this subject see the Annual Report of this Office for 1894-95, Vol. II, pp. 1469-1482; 1895-96, II, 1353-1358; 1898-99, I, 526-529; 1899-1900, II, 2581-2584; 1901, I, 161-213, and II, 23 6-2402; 1902, II, 2353-2369.]

The practice of consolidating two or more small schools and transporting the more distant pupils of the discontinued schools to the central (usually graded) school at the public expense has been resorted to, either under specific provisions or under the general authority of the law, in the following States: California, Colorado, Connecticut, Florida, Georgia, Indiana, Iowa, Kansas, Maine, Massachusetts, Michigan, Minnesota, Montana (1903), Nebraska, New Hampshire, New Jersey, New York, North Dakota, Ohio, Oregon, Pennsylvania, Rhode Island, South Dakota, Vermont, Virginia (1903), Washington, and Wisconsin.

Notable movements toward the consolidation of schools, but without the feature of transportation, have been recently inaugurated in North Carolina and Missouri. Some progress in the same direction has also been made in Louisiana and other States.

The following tables give the available statistics on the subject. It will be seen that Maine and Vermont expend the largest proportion of their school money for transportation, about one-thirtieth of the total.

Per cent of total expenditure used for transportation.

School year.	Maine.		Vermont.		Massachusetts.		Connecticut.		New Jersey.	
	Expended for transportation.	Per cent of total.	Expended for transportation.	Per cent of total.	Expended for transportation.	Per cent of total.	Expended for transportation.	Per cent of total.	Expended for transportation.	Per cent of total.

Some reported cases showing the economical advantages of consolidation and transportation.

Location.	Schools. Before consolidating.	Schools. After.	Pupils transported.	Cost of transportation.	Cost per pupil.	Amount saved (annually unless otherwise noted).
NEW HAMPSHIRE.						
The State				Mostly 4 or 5 cents a mile each way.		Cost less in 118 towns, the same in 5, more in 1.
1 town						Five-sixths saved.
3 towns						Four-fifths saved.
7 towns						Three-fourths saved.
8 towns						Two-thirds saved.
1 town						Five-eighths saved.
Do						Three-fifths saved.
26 towns						One-half saved.
1 town						Two-fifths saved.
Do			3 to 5	$69 a year		$101.
MASSACHUSETTS.						
The State						Cost (after consolidation) less in 68 per cent of towns, more in 16 percent, the same in 15 per cent.
Warwick	9	1	60			$132 in regular teachers' wages, though salaries increased from $5 to $9 per week, and term from 24 to 36 weeks.
Quincy (Crane School abandoned, 1874).	2	1	17	$420 a year		$140.
Montague						$600 at least.
OHIO.						
Gustavus	10	1		$220 a month		$256 greater cost after consolidation.
Kingsville				$797 a month		More than $1,000 in three years.
Madison	13	5	About 90	About $5 a day		Total expense about the same; per capita of enrollment reduced from $16 to $10.48.
INDIANA.						
Allen County, Fort Wayne.	2	1	20			About $1 a day.
Bartholomew County, Columbus.	2	1				About $35 a month.
Benton County				$25 a month (1 school).		Fully 50 per cent (3 townships).
ClarkCounty,Charleston			5			$75 (a year?).
Clinton County (3 townships).						$1.65 to $2.50 a day (each school?).
Delaware County:						
Crossroads	2	1	7	$1.25 a day		$450 to $500 in 7½ months.
Daleville	2	1	7	....do		
Royerton	6	1	129	$8.75 a day	$0.067	$58.
Selma	3	1	24	$1.50 a day		$600.
Hendricks County						About $2 a day for every school vacated.
Huntington County (1 school).				$0.89 a day		Over $1 a day, besides expense of fuel, etc.
Jackson County, Carr	2	1	12			75 cents a day.
Jasper County, Walker	2	1	8	$90		$210.
Lagrange County			428	$6,177		$6,734.
Laporte County				$75 to $160 per school.		$220 to $305 per school.
Newton County,McClellan.	6	3				$708.
Ohio County, Randolph.						$150 (1 school abandoned).
Perry County, Union			9			$240 (1 school abandoned).
Rush County:						
Raleigh	5	1				
Washington	8	5	43			"Money has been saved."
Shelby County,Hanover (1 school).				$1 a day		Cost per pupil reduced one-half.
Tipton County,Jefferson (1 school).			10	$100		$172.
Vanderberg County, Knight.	2	1		$15 a month		$27 a month.
Wayne County:						
Economy	5	1	25	$1.15 a day		
Webster	4	1	50	$4.40 a day		About $4 a day.
White County (4 townships).						$150, $165, $180, $220.
Whitley County						About $135 by each abandonment.

FREE TEXT-BOOKS AND SUPPLIES.

The following table gives certain particulars of the laws relating to free text-books and supplies in those States which have statutory provisions upon the subject:

State.	Law mandatory or optional?	What shall or may be loaned free?	Limited to what pupils, grades, branches, or expenditure?
Maine	Mandatory	Schoolbooks, apparatus, and appliances.	Not limited.
New Hampshire	do	Text-books and other supplies.	Do.
Vermont	do	Appliances, supplies, and text-books.	To certain specified elementary branches.
Massachusetts	do	Text-books and other school supplies.[a]	Not limited.
Rhode Island	do	Text-books and other school supplies.	Do.
Connecticut[b]	Optional	do	Do.
New York	do	Text-books	To pupils of schools in union free school districts.
New Jersey	Mandatory	Text-books and school supplies.	Not limited.
Pennsylvania	do	Books and school supplies.	Do.
Delaware	do	Text-books	To pupils (including colored) of public schools outside of Wilmington.
Maryland	do	do	Introduced into the grades successively, beginning with the first. Annual expenditure limited to $150,000, appropriated by the State.
District of Columbia[c]	Optional	Text-books and supplies	To grades below high school.
West Virginia	do	Text-books	Not limited.
Ohio	do	Schoolbooks	To the elementary branches specified in the compulsory-attendance law.
Michigan	do	Text-books	To certain specified elementary branches.
Wisconsin	do	do	Not limited.
Minnesota	do	do	Do.
Iowa	do	do	Do.
North Dakota	do	Books and supplies	Do.
South Dakota	do	Schoolbooks	Do.
Nebraska	Mandatory	Text-books and school supplies.	Do.
Kansas	Optional	Text-books	Do.
Wyoming	Mandatory	Text-books and school supplies.	Do.
Colorado	Optional	Text-books	Do.
Utah	Mandatory	Text-books and supplies	To pupils of schools below high school.
Idaho	Optional	Text-books	Not limited.
Washington	do	do	Do.

[a] Including tools, implements, and materials used for instruction in the use of tools and cooking.
[b] An act of 1905 requires every town that has not hitherto voted on the question of free text-books to take such vote.
[c] No law upon the subject. Congress makes annually the necessary appropriation upon the estimate of the Board of Education.

TEMPERANCE INSTRUCTION IN THE PUBLIC SCHOOLS.

The following table shows the leading provisions of the statutes of the several States, and Territories relating to temperance instruction in the public schools:

EXPLANATION OF CHARACTERS.

M—The study of physiology and hygiene, with special reference to the effects of alcoholic drinks and narcotics upon the human system, is Mandatory in the public schools.

TT—It must be Taught in the same manner and as Thoroughly as other required branches.

TE—Teachers must pass a satisfactory Examination in this subject as a condition of employment.

A—The study must be taught in All schools supported in whole or in part by public funds.

AA—It is required of All pupils in All schools.

PRB—Pupils able to Read must be taught by means of text Books on the subject.

1 5-20 (or 1/4-20)—The text-books on physiology for primary and intermediate schools must give one-fifth (or one-fourth) their space to this subject, and those for high schools at least 20 pages.

SA—Text-books must give Space Adequate to the subject.

PE—Pupils must be Examined and tested in their knowledge of this subject before being promoted to higher grades.

SR—County or city Superintendent must Report to State superintendent to what extent this law has been complied with.

TC—Teacher must Certify in school register, before returning same at the end of the term, whether this law has been complied with in his school or grade.

TN—The subject must be Taught in Normal schools, teachers' training classes, and institutes.

P—The statute specifies a Penalty for violation. In other States it is punishable under some general penal statute.

n—A minimum Number of lessons per week and year is specified.

* Above primary.

° All pupils whose capacity will admit.

§ Above the fourth grade.

TEACHERS' PENSIONS.

The conditions under which pensions are paid to teachers in European countries are stated in the Annual Report of 1902 (see pages 2369–2371), where dues, pensions, and years of service required are tabulated and afford an opportunity for comparison.

In the United States teachers are not pensioned from public school funds, except in Maryland, Ohio, and New Jersey. In New York other funds are drawn upon to pension teachers. (See below.) Voluntary beneficial associations have been formed in some cities and in other localities specified below. In certain States the laws provide for pension funds, but the feature of compulsory membership which the laws contained at first has been eliminated in Illinois and Ohio. A consequence of this was that many members withdrew and that the amount of annuity was greatly reduced. The following paragraphs show the varieties of organization, etc.:

Voluntary mutual benefit associations, for temporary aid only, exist in Baltimore, St. Louis, Cincinnati, Cleveland, Detroit, Chicago, Buffalo, San Francisco, and St. Paul, and there is one interstate association. These call for $1 to $2 initiation fee, $1 to $5 annual dues. Special assessments of $1 are made in some cases. Benefits in sickness range from 50 cents a day to $10 a week; at death, funeral expenses only are paid in some instances, and in others a sum equal to $1 from each member of the association.

Associations for annuity, or retirement fund only, are in New York, Boston, and Baltimore, and there is an annuity guild in Massachusetts. The initiation fees reported are $3 to $5. The annual dues are 1 to 1½ per cent of salary up to $18 or $20. The annuity is from 60 per cent of salary to $600 a year. Time of service required for retirement is from two to five years with disability, or from thirty-five to forty years without disability.

Associations for both temporary aid and annuity exist in Hamilton County, Ohio (Cincinnati), Philadelphia, Brooklyn, and the District of Columbia. Initiation fees, $1 to $10; annual dues, $5 to $40. Annuity, $5 a week to $600 per year, and $100 for funeral expenses in case of death. Temporary aid during illness, $5 or $6 per week. Time of service required for retirement is two to five years with disability, or thirty-five to forty years without disability.

In some cities the subject of pension funds administered by public authorities has been agitated and discussed by teachers. In consequence pension or retirement funds are authorized by State legislatures for St. Louis, Boston, Providence, Brooklyn, New York City, Poughkeepsie, Detroit, Chicago, Charleston, S. C., and Buffalo, and for all cities in California. In New Jersey and in the State of Maryland the State pays pensions to retired teachers. Dues vary little; they are generally 1 per cent of salary. Annuity, $250 to one-half of salary; maximum limit, $600. Minimum length of service with disability, twenty to thirty years; without disability, twenty-five to thirty-five years. In Maryland no dues are paid, but the State exclusively assumes the burden of paying pensions to teachers.

Following are some of the provisions made by the laws in the respective States:[a]

California.—As a result of the law which authorizes the establishment of teachers' retirement funds, San Francisco has one administered as follows: Assessment, $12 a year deducted from teachers' salaries; $6 a year from evening school-teachers receiving less than $50 a month. Gifts and legacies and not less than half of sums forfeited by absence from duty. A nonreducible fund of $50,000 is created by using 25 per cent of all moneys from these sources and all gifts specifically bequeathed for the purpose of increasing this permanent fund. The fund is administered by a commission consisting of the mayor, the school superintendent, and the county treasurer, who report biennially to the supervisors. There is a retirement committee of five teachers, one at least from primary and one from grammar grades, elected for three years. Term of teachers' service, thirty years, with thirty years' assessments. Amount of annuity, $50 a month; proportionate annuity to incapacitated teachers who have been contributors for at least five years. Annuity ceases on return to public schools, or when incapacity ceases, if annuitant has received a sum which reimbursed

[a] In part after a summary prepared for the Chicago Teachers' Federation Bulletin.

Digitized by Google

for contributions. Provision is made for pro rating. Necessary expenses are paid from fund.

Illinois.—The law of 1895, amended in 1901, provides as follows:

That the board of education in cities having a population exceeding 100,000 inhabitants, shall have power, and it shall be the duty of said board, to create a public school-teachers and public school employees' pension and retirement fund, and for that purpose shall set apart the following money, to wit: (1) An amount not exceeding one per cent per annum of the respective salaries paid to teachers and school employees elected by such board of education, which amount shall be deducted in equal installments from the said salaries at the regular time for the payment of such salaries; (2) all moneys received from donations, legacies, gifts, bequests, or otherwise, on account of said fund; (3) all moneys which may be derived from any and all sources: *Provided, however,* That no tax shall ever be levied for said fund; (4) any public school-teacher or public school employee, a part of whose salary is now or may hereafter be set apart to provide for the fund herein created by this act, may be released from the necessities of making further payments to said fund by filing a written notice of his or her desire to withdraw from complying with the provisions of this act with said board of trustees, which said resignation shall operate and go into effect immediately upon its receipt by said board of trustees.

In compliance with this law Chicago has a fund made up of gifts, legacies, and 1 per cent of salaries. It is administered by the board of education, two trustees elected by the contributors, and the superintendent of schools ex officio. Term of teachers' service, twenty years for women, twenty-five years for men; three-fifths of the service must have been within the municipality. Teachers may retire voluntarily, or be retired by the board of education on completing the term of service required. Amount of annuity is half salary, provided it does not exceed $600. It is optional with teachers to join the society. If the fund should prove insufficient to pay full annuity, the law provides for proportionate pro rating of all annuities.

Maryland.—The law of 1902 reads as follows:

Whenever any person in this State has taught in any of the public or normal schools thereof twenty-five years, and has reached the age of sixty years, and his or her record as such teacher has been without reproach, and by reason of physical or mental disability or infirmity is unable to teach longer, the said teacher may lay his or her case before the State board of education, and the said board shall proceed to consider the same, and if the facts are found as above stated the said teacher shall be placed upon a list, a record of which shall be kept by the said board, to be known as the "teachers' retired list," and the names upon said "teachers' retired list" shall be regularly certified by said board to the comptroller of the treasury of this State, and every person so placed upon the said "retired list" shall be entitled to receive a pension from this State of two hundred dollars per annum, to be paid quarterly by the treasurer of this State upon the warrant of the comptroller.

Massachusetts.—An act of the general court of this State, approved April 17, 1900, to create a public school teachers' retirement fund in Boston, provides that there be a permanent and a general fund. The permanent fund is made up of gifts and legacies specially given to it and a sum set apart by the board of trustees. The general fund is made up of all gifts and legacies not specifically given to the permanent fund, together with the interest of the permanent fund and amounts retained for the purpose from teachers' salaries. The board of trustees consists of the superintendent of schools, ex officio, 3 female and 3 male teachers selected by teachers of Boston, and 4 members of the school committee, elected by that committee. All these trustees serve without compensation, but necessary expenses are paid. The city treasurer is custodian of the funds. The sum reserved from teachers' salaries is $3 each alternate month. The term of service is thirty years, ten in the Boston schools. The amount of annuities is determined by the board of trustees as the fund will allow. (The annuity for 1904 was $180, in monthly payments of $15 each.) Teachers incapacitated and discharged for such incapacity, having taught not less than two years in Boston, may be paid such annuity as the trustees determine and the fund will allow, provided that certificates are furnished by the attending physician and by a physician employed by the trustees, and the annuity ceases when incapacity ceases. All annuities are uniform in amount, except as provided in the next clause. No annuity is payable until a teacher shall have contributed $540 to the fund, a sum equal to the assessments

Digitized by Google

for thirty years, except in cases of inability to contribute the full amount, where the board may make such payments as necessity shall require. Teachers who have contributed for more than two years may, on retiring without annuity, receive one-half of amount paid by them into the fund. The act is mandatory upon all teachers entering the service after it goes into effect, and upon such others as may elect to come under its provisions. Principals, supervisors, superintendents, and all regular instructors come under the head of teachers.

Michigan.—The public school teachers' retirement fund of Detroit consists of two funds, the permanent and the general. The permanent fund consists of (1) gifts, legacies, etc., designated for such fund; (2) moneys appropriated by the board of education or raised therefor by approval of common council and board of estimates; (3) tuition fees of nonresident pupils; (4) interest on daily balances of moneys appropriated for teachers' salaries; (5) moneys which trustees of retirement fund may transfer from the general fund. Interest on this fund shall be turned over to the general fund and used in payment of annuities. No portion of permanent fund shall be so used. The general fund consists of (1) assessments upon teachers' salaries, not less than 1 nor more than 3 per cent per annum. No deduction in form of assessment may be made on basis of more than $1,000; (2) income from interest of money in the permanent fund; (3) all moneys deducted from teachers' salaries for absence or any other cause; (4) all moneys intended for retirement fund and not already specified. The board of trustees consists of the president of the board of education, the president pro tempore of that board, the chairman of the committee on teachers, the superintendent of schools, and three teachers elected from contributors to the fund by ballot as board of trustees shall prescribe. Term, three years, one teacher elected each year. The funds are in the hands of the treasurer of the board of education. The amount assessed upon the salaries is determined by the board of education on recommendation of the board of trustees. In case of discontinuance of retirement fund all moneys appropriated therefor from funds of board of education (such as tuition fees of nonresident pupils, deductions for absence, interest on salary fund) shall revert to the teachers' salary fund. When the permanent fund shall have reached $100,000, no funds shall be added to it from deductions for absence or interest on salary fund except by a two-thirds vote of the board of education. Term of service for annuity, thirty years, of which twenty years must be in Detroit, or twenty-five years in schools of Detroit render a teacher eligible on application. Teachers incapacitated for duty, having taught twenty years, ten in Detroit, may be retired by two-thirds vote of the board of trustees. Teachers who resign or are removed for cause may apply after three months for such portion of money contributed by them as trustees shall direct to be paid, not to exceed one-half of their contributions. Annuities are not to exceed $250. Current expenses of the trustees are paid from the maintenance fund of the board of education.

New Jersey.—This State makes provision for the retirement of teachers in Article XXVII of its school law. The essential features of the law are as follows: A board of trustees of the teachers' retirement fund is created, which board administers the fund and pays annuities according to the following provisions:

Whenever any teacher shall have taught in the public schools * * * for a period or periods aggregating twenty years or more, and shall have become incapacitated from earning a sufficient livelihood, such teacher shall, at his or her request, and on the approval of the aforesaid board of trustees, be retired as a teacher and shall receive an annuity out of the fund * * * equal to one-half of the average annual salary received by such teacher for the five years immediately preceding the time of retirement: *Provided, however,* That no annuity shall be less than two hundred and fifty dollars nor more than six hundred dollars: *Provided, further,* That no teacher shall be retired under the provisions of this article unless he or she shall have first paid into said fund such sum as shall make his or her total payments into said fund equal to at least twenty per centum of his or her average annual salary for the five years immediately preceding the time of such retirement.

The retirement fund herein provided for shall be made up as follows:

I. One per centum of the monthly salaries of all teachers upon whom this act shall have become binding by its terms prior to January first, one thousand nine hundred and three; one per centum of the monthly salaries of all teachers who shall become members of said fund on or after January first, one thousand nine hundred and three, and who shall have been

Digitized by Google

teaching ten years or less at the time of becoming members of said fund; two per centum of the monthly salaries of all teachers who shall become members of said fund on or after said date, and who shall have been teaching more than ten years at the time of becoming members of said fund: *Provided*, That on or after said date no person who shall have been teaching more than fifteen years shall become a member of said fund unless he or she shall have passed a satisfactory medical examination under such rules as the board of trustees may prescribe: *And provided further*, That a teacher now a member of said fund shall not be required to pay more than one per centum of his or her salary by reason of the fact that he or she has been teaching more than ten years. * * *

II. One per centum of all annuities paid under the provisions of this article, which shall be deducted and withheld from each payment made to any annuitant.

III. All moneys and property received by donation, legacy, gift, bequest, devise, or otherwise, for or on account of said fund.

IV. All interest on investments and other moneys which may be duly and legally raised for the increase of said fund.

Since 1897 as many as 109 annuities have been granted in the State, to 19 men and 90 women. The amount of benefits paid is $93,754, and the fund at present is $85,000.

New York.—The law passed by the legislature in 1902, with reference to a retirement fund in Poughkeepsie, provides that the fund be composed of (1) "all money, pay, compensation, or salary, or any part thereof, forfeited, deducted, or withheld for or on account of absence from duty for any cause; (2) all moneys received from donations, legacies, gifts, bequests; (3) 2 per cent of the salaries paid each month."

The law creating a retirement fund in *Greater New York* designates as sources of this fund (1) money forfeited or withheld for absence from duty; (2) moneys received from donations, legacies, gifts; (3) 5 per cent annually of all excise moneys or fees from licenses granted to sell strong or spirituous liquors. Nothing is said of a regular contribution on the part of the teachers. The amount of annuity is fixed at one-half of the teacher's salary at the date of retirement, provided it does not exceed $1,000 in the case of a teacher and $1,500 in the case of a principal or superintendent, nor shall any annuity fall below $600.

The fund is invested by the city controller and administered by the board of education. The term of service is thirty years, twenty of which in New York City. Teachers are retired for physical or mental incapacity on recommendation of the superintendent and two-thirds vote of the board of education. Any teacher sixty-five years of age, having taught thirty years, twenty in the city, may be retired at discretion of the board.

The law has been amended to include normal college and supervisors in institutions controlled by departments of public charities and correction. Term of service necessary for normal teachers, ten years in New York, thirty years aggregate service. The board has power to use both principal and income of fund. In April, 1905, the fund of Manhattan and Bronx amounted to $160,744; annuities paid up to that date amount to $335,950.

Ohio.—The law passed in May, 1902, by the legislature of *Ohio* amends the law which authorized the cities of Cincinnati and Cleveland to maintain pension funds for teachers, and extends the benefits of such funds over all school districts of the State; that is to say, the school authorities of a district are granted the right to create a fund and retire teachers, but the act does not make it mandatory upon them. The fund is obtained by withholding $2 each month, or $20 a year, from the salaries of teachers who have declared their desire to become contributors and subsequently beneficiaries of the fund. This is the voluntary feature of the act mentioned before. (See p. 2281.) The authorities may retire a teacher from service on account of mental or physical disability and apply the pension provisions after twenty years of service, provided three-fifths of that time have been spent in the service of the district or county and two-fifths of that time in other parts of the State or elsewhere. The term "teacher" includes principals and supervisory officers. The right to retire voluntarily and become a beneficiary is granted for both women and men teachers alike, after they have taught thirty years, with the same proviso as before. The amount of the pensions paid is $10 a year for every year served, but in no case more than $500 a year. Both principal and income of the fund may be drawn upon to pay the pensions. The teachers are to receive certificates monthly showing what amount has been withheld from their salaries.

Digitized by Google

In case a teacher resigns from the profession she may claim one-half of the sum she paid into the fund during her service in school. The act is explicit on the question as to who may serve as custodian of the fund, how it is to be invested, and on other details.

The new school code of *Ohio*, passed April 25, 1904, contains the following provisions:

Any board which has created, or shall hereafter create, a teachers' pension fund shall pay into such fund all deductions, fines, penalties, and assessments made against teachers or other employees of the board. Such board may also pay to such pension fund, out of the contingent fund, not to exceed 2 per cent of the amount raised by the board from taxation.

Rhode Island.—Annuity funds are authorized by the legislature for the city of Providence.

South Carolina.—Charleston has a retirement fund composed of one per cent of salaries. Annuity must not exceed $250, and is only given to teachers whose circumstances are such as to make it imperative that outside aid be given them.

General remarks.—The provision to withhold a percentage of all the teachers' salaries and pay it into the annuity fund was abandoned after the teachers of Toledo had fought it successfully in the supreme court of Ohio. A similar provision was declared unconstitutional in Minnesota as regards Minneapolis. In Chicago the coercive feature first adopted was eliminated, and membership in the retirement societies in Chicago and everywhere else is now voluntary where assessments are required. In States and cities where the law provides for public authorities to administer a teachers' retirement fund the associations for temporary aid and annuity are gradually closing up their business or merging their interest with the fund created by law. This has been the result in Europe, and naturally will be the result here.

CORPORAL PUNISHMENT.

Regulations concerning corporal punishment in public schools in cities of 100,000 or more inhabitants.

City.	Regulation.	Authority.
Allegheny, Pa	To be avoided when obedience and good order can be preserved by milder measures. Full and accurate record required to be kept, which at all times must be subject to inspection of any member of the board or a parent of a pupil in attendance.	Rules, Art. III, sec. 7, and Art. IV, sec. 3, contained in Annual Report, 1904, pp. 151 and 152.
Baltimore, Md	Forbidden	Rules, 1901, p. 17, art. 181.
Boston, Mass	Forbidden in high schools and kindergartens, and as to girls in any school. In any case, restricted to blows upon the hand with a rattan. Each case must be reported through the principal to the superintendent.	Rules and Regulations, 1904, secs. 195 and 218.
Buffalo, N. Y	The schools must be governed, as far as possible, without corporal punishment, special permission of the superintendent necessary for any other than a principal or an assistant principal to administer punishment.	Charter and Ordinances, 1896, Chap. XIV, p. 218. sec. 39.
Chicago, Ill	Forbidden	Rules and Regulations, 1898, p. 38, sec. 62.
Cincinnati, Ohio	May not be inflicted for failures in lessons or recitations. Blows on head or violent shaking of pupils prohibited.	Annual Report, 1896, p. 199, sec. 84.
Cleveland, Ohio	Forbidden, except in unclassified schools, where it is permitted when principal and superintendent consent.	Handbook, 1904, pp. 92 and 94, secs. 22, 23.
Columbus, Ohio	Allowed when all other means have failed. To be inflicted in schoolroom by pupil's teacher, the principal being the judge of special cases.	Report, 1891, p. 136, secs. 27, 28.
Denver, Colo	Teachers are required to consult with and to get the approval of the principal before administering corporal punishment. The child's parent and the superintendent must be promptly informed by letter.	Rules, 1903, Rule XV, secs. 14 and 16.
Detroit, Mich	Must be avoided if possible. Must not be inflicted without full knowledge and consent of principal.	Manual, 1905, p. 109, rules 90 and 92c.

Digitized by Google

Regulations concerning corporal punishment in public schools in cities of 100,000 or more inhabitants—Continued.

City.	Regulation.	Authority.
Fall River, Mass	May be inflicted when milder measures fail. Must not ordinarily be administered in presence of school. Record of each punishment and offense must be sent to superintendent for inspection of the board.	Rules and Regulations, 1904, p. 12, sec. 46.
Indianapolis, Ind	Must be avoided as far as possible. May be inflicted only in presence of principal, and must be immediately reported by him to superintendent.	Manual, 1907, p. 51, sec. 11.
Jersey City, N. J	Forbidden	New Jersey School Laws, 1902, p. 46, sec. 106.
Kansas City, Mo	May be inflicted in cases of flagrant offenses, and then only after duly notifying parents or guardians of intended punishment; and if parent or guardian will administer punishment, so as to preserve discipline of the school, teacher must inflict no additional punishment. Must not be inflicted in presence of school, but at the close of session and in presence of two other teachers or the superintendent.	Rules and Regulations, 1896, p. 24, sec. 88.
Los Angeles, Cal	Must be avoided if possible; switch or strap to be used; blows upon face or head forbidden.	Report, 1904, p. 174, sec. 87.
Louisville, Ky	Forbidden	Manual, 1905, p. 33, rule 3.
Lowell, Mass	To be inflicted only as a last resort	Rules, 1902, p. 22, sec. 24.
Memphis, Tenn	Must be avoided when good order can be preserved by milder measures.	Manual, 1898, p. 53, sec. 48.
Milwaukee, Wis	Permitted as last resort by principal only. Excessive punishment and lonely confinement prohibited. Must not be inflicted in presence of class. All cases must be reported monthly to superintendent.	Rules and Regulations, 1901, p. 49, Art. XIV, secs. 7, 8.
Minneapolis, Minn	Permitted only when all other means fail. Principal only may inflict corporal punishment; then only when parents give written consent. Each case must be reported by principal to superintendent.	Report, 1904, p. 155, sec. 6.
Newark, N. J	Forbidden	New Jersey School Laws, 1902, p. 46, sec. 106.
New Haven, Conn	May be administered, with consent of principal, in extreme cases only, but never at same session of school at which the offense was committed. Cases to be reported monthly to superintendent.	Manual, 1891, p. 56, art. 12, sec. 176.
New Orleans, La	Restricted to male pupils below high school, and to be administered only after all other means have failed. Only principal, or assistant principal by authority of the former, have right to inflict. Restricted to the hands, and must not be inflicted in presence of class, or at time of offense. Monthly report to superintendent required.	Report, 1902, p. 187, Art. VII, secs. 5–8.
New York, N. Y	Forbidden	By-laws, 1902, p. 41, sec. 451.
Omaha, Nebr	Teachers are required to govern their pupils by kindness and appeals to their nobler affections and sentiments.	Rules and Regulations, 1900, p. 55, sec. 105.
Paterson, N. J	Forbidden	New Jersey School Laws, 1902, p. 46, sec. 106.
Philadelphia, Pa	There is no rule, but corporal punishment is said to have been abandoned by common consent.	
Pittsburg, Pa	Not forbidden, but is inflicted only in extreme cases.	Report, 1900, p. 11.
Providence, R. I	No pupil above primary liable, and in the latter only with written consent of parent or guardian. Each case must be reported to superintendent immediately, who causes an investigation to be made.	By-laws, 1903, p. 26, Art. XIV.
Rochester, N. Y	May be inflicted in extreme cases by the principal or, with his consent, by an assistant.	By-laws and Rules, 1898, p. 38, sec. 5.
St. Joseph, Mo	Must be avoided as far as possible. Each case to be reported to principal and by him monthly to superintendent.	Report, 1890, p. 170, sec. 13.
St. Louis, Mo	Inflicted only with consent of principal, by either teacher or principal, presence of both being required. Authorized but not encouraged by the board, being left largely to the discretion and judgment of principals. In some schools the latter dispense with it altogether, while in others it is permitted in extreme cases.	Report, 1903, p. 231.

Regulations concerning corporal punishment in public schools in cities of 100,000 or more inhabitants—Continued.

City.	Regulation.	Authority.
St. Paul, Minn	Forbidden, except when necessary to repel violence.	Report, 1904, p. 219 sec. 131.
San Francisco, Cal	May not be inflicted in the high schools or upon girls in any schools. It is permitted only in extreme cases and may be inflicted only by principals or by vice-principals with the consent of principals. Excessive punishment is prohibited, only a strap or a rattan being allowed.	Rules, 1900, p. 25, sec 64.
Scranton, Pa	Forbidden except in flagrant cases of disobedience and disorder. Not to be administered in presence of school, but some other teacher or the superintendent required to be present.	Rules and Regulations, 1887, p. 14, sec. 6.
Syracuse, N. Y	Forbidden	Rules and Regulations, 1898, p. 30, sec. 20.
Toledo, Ohio	Forbiddden	By-laws, 1885, p. 53, sec. 3.
Washington, D. C	Must be avoided if possible. All cases must be reported monthly to principal and through him and supervising principal to superintendent.	Rules, 1903, p. 22, sec. 48.
Worcester, Mass	Permitted only in extreme cases, then only when approved by principal or superintendent. Must not be inflicted in presence of school. Teachers are required to make and keep complete records of all cases.	Rules, 1905, p. 24, sec. 13.

COEDUCATION OF THE SEXES.

Coeducation, or the instruction of both sexes in the same schools and classes, is a characteristic feature of public education in the United States. Of elementary pupils at least 96 per cent are enrolled in mixed schools, and of secondary pupils 95 per cent. On a total enrollment of 16,324,669 pupils in public schools (elementary, secondary, and normal), at least 15,500,000 are in schools attended by both sexes.

The very general favor with which the coeducation policy is regarded is indicated also by its extension to private schools. The reports show that of the pupils enrolled in private secondary schools 43 per cent are in mixed schools. As to higher institutions—colleges and universities—62.5 per cent of all undergraduates are in coeducational institutions. The proportion would doubtless be much higher if only State universities and land-grant colleges were considered. Altogether above 16 million children and youth of this country are studying in coeducational schools and colleges.

The most noticeable fact in the recent history of public education in this country is the increase in the number of high schools. In 1902 the number of such schools reported was 6,292, enrolling 550,611 pupils (226,914 boys, 323,697 girls). Of the total enrollment 523,344 pupils (215,944 boys, 307,400 girls) were in coeducational schools. Of 628 leading cities in the country, 15 only had separate high schools in 1891; in 1901 the number had fallen to 12.

In 1880 more than half the colleges of the country, 51.3 per cent (omitting in this consideration colleges exclusively for women and land-grant colleges, not departments of universities), reported coeducation either in the preparatory departments or in both preparatory and collegiate departments. Considering the latter only, there were 128 universities and colleges, or 35.7 per cent of the total number reported, which admitted women to the college classes. The 2,323 women regularly matriculated in these institutions formed 7.2 per cent of the total number of their undergraduates. In the decade 1889 to 1890 the number of coeducational colleges had increased to 65.6 per cent of the total number, and the proportion of women matriculated to 19.5 per cent of the total number of college students. In 1900 the proportion of coeducational colleges was 71.6 per cent, and the proportion of women in their collegiate departments 24.7 per cent of their total registration. In 1904 the propor-

Digitized by Google

sent of coeducational colleges last reached 71 per cent and the proportion of women in these colleges to the total number of students in coeducational institutions was 47.5 per cent.

In the total number of coeducational institutions are included 14 universities endowed by public funds (viz 3 State and 3 Territorial and 14 private foundations of high order. For particulars respecting these institutions see Chapter XXV, pp. 2417–2444.

The total number of women college students reported to this Office in 1904 was 41,1962. Of this number 61 per cent were in coeducational colleges.

The most significant fact in the recent history of coeducation is the admission of women to graduate courses in certain universities of the East—notably Yale and Columbia—which exclude them from the undergraduate departments.

Foreign countries.—In England 65 per cent of the departments into which the elementary schools are divided are boys and girls in the same classes; in Scotland 76 per cent. Statistics for Ireland show that 51 per cent of the national schools have a mixed attendance of boys and girls.

Separate education is the general policy in English schools of secondary grade, and where both sexes are admitted to the same school it is generally to separate departments. The royal commission on secondary education advocate the extension of the coeducational policy, and since the publication of their report 1895 experiments in this direction have materially increased.

In the British colonies, with very few exceptions, both mixed and separate schools are found. In Ontario all the schools are mixed. In Quebec the schools for English children are, as a rule, mixed, but in those for the French the sexes are separated. In the Australasian colonies the tendency to separate departments for boys and girls is noticeable in cities. In Cape Colony, where nearly all schools are mixed, separate schools for girls are encouraged.

In France custom and sentiment favor the separate education of boys and girls, and the law requires every commune having above 500 inhabitants to establish a separate school for girls unless specially authorized to substitute therefor a mixed school.

In secondary schools, public and private, separate education is the universal rule.

Germany.—Separate education is the preferred policy of the German States, but is not practicable in the rural primary schools. According to statistics of 1891, in Prussia two-thirds of the children in the common schools were in mixed classes, but in the cities the proportion was only three-tenths. In Saxony only the two lowest classes are mixed, so that separation occurs generally at the tenth year of age—always by the twelfth.

Other continental countries.—Similar conditions prevail in the remaining countries of Europe, the tendency toward separation being most strongly marked in the Catholic countries. In Italy the law calls for separate schools for boys and girls, and if they attend at the same building it must be in separate departments, each provided with its own entrance door. The lowest classes, however, may be, and often are, mixed.

In Norway, and to a less extent in Denmark, girls are securing admission to secondary schools formerly reserved for boys.

The South American republics follow the precedent of the Latin States of Europe. Brazil, like Italy, requires separate schools for the two sexes. In 1888 the experiment of admitting boys and girls to the same class room was made in a few schools, but they were seated in different rooms outside of recitation hours.

Coeducation in the universities of Europe.—At Oxford University women are admitted by courtesy to the lectures of about 160 professors and readers. They are also admitted to the examinations for B. A., but the degree itself is not conferred upon them. Substantially the same arrangements have been adopted at Cambridge. Durham University confers upon women all degrees excepting those in divinity. London University, Victoria University, and the University of Wales make no discrimination on account of sex.

The university colleges established in England since 1868 are open to men and women. By the "universities act" of 1889 the Scotch universities were authorized to open their doors to women. Edinburgh admits them to the classes with men. Glasgow has affiliated Queen

Digitized by Google

Margaret College for Women, and more recently (1895) opened all lectures in the faculty of arts to women. The University College of Dundee, affiliated to St. Andrews, is coeducational.

Women are admitted to all the privileges of the Royal University of Ireland, and during the past year a statute was passed admitting them to Trinity College (Dublin).

In France women have never been legally deprived of university privileges, and since 1863, when the first woman was enrolled in the Paris faculties, the number of women matriculates has been gradually increasing.

The universities and secondary schools of Italy admit students of both sexes to the same class, a policy at variance with that pursued in the elementary schools.

Women have recently been admitted to courses in the universities of Germany, Austria, and Hungary, special authorization being required in each individual case.

Altogether there are 87 universities in Europe which admit women on the same conditions as men, 5 which admit women by special permission to some lectures and examinations, and 20 which admit them by special permission to a limited number of lectures.

WOMEN IN SCHOOL ADMINISTRATION.

The association of young men and women on equal terms in the schools and colleges of this country explains in a great measure the freedom that women here enjoy with respect to the pursuit of careers, and especially the large share which they take in the educational work of the country.

In the public schools (all grades included) 72 per cent of the teachers are women. Their relation to the public school does not stop here. They participate as school officials and also, through the exercise of the ballot, in the local conduct of school affairs.

The number of women serving as district school officers appears to be comparatively large, but there are no complete statistics on this point. The number of women serving as county school superintendents in States having this office is 324.

As a rule women are eligible to the school boards of northern and western cities, and eleven women hold the position of city school superintendent.

In two States, Colorado and Idaho, women are at the head of the public school system, holding the position of State superintendent.

In 27 States and 2 Territories women have the right to vote for school officers.

HIGHER COMMERCIAL EDUCATION IN EUROPE.

In Europe the importance of higher commercial education has been recognized by the establishment of commercial academies and university faculties of commerce in Leipzig, Frankfort-on-the-Main, Cologne, and Aix-la-Chapelle (Aachen), Germany; in Vienna, Trieste, and Prague, Austria; in Zurich, Switzerland; in Paris and Lyon, France; in Antwerp, Belgium; in London and Birmingham, England, and in Edinburgh, Scotland. The four institutions in Germany already, five years after their establishment, have nearly 3,000 students, 358 of whom are foreigners, chiefly from countries where no provision is made for higher commercial studies. These institutions have no uniform curriculum, such as universities or polytechnica have, nor is their organization the same. Two of the four institutions (Frankfort and Cologne) are independent schools, maintained by means of tuition fees, city subsidies, and endowments; one is connected with the University of Leipzig, one with the Polytechnicum at Aix-la-Chapelle. The Leipzig institution is the oldest of the four and has the greatest number of matriculated students; that of Cologne has the largest number of hearers (or nonmatriculated students), most of whom attend evening courses. The institu-

Digitized by Google

tion at Frankfort is modeled somewhat after the French social science schools, for it bears the title "Academy of Social and Commercial Sciences." The other three have purely commercial curricula, in which the subject of "merchandise" or commercial technology takes up much time. All of them teach from four to six modern languages, two or three of which are optional studies. A fifth institution, intended to aid the higher education of merchants, is planned for Hamburg, where the officials of the great steamship companies and the heads of exporting houses are agitating the establishment of a commercial university. Berlin, also, is likely to open a similar institution. The chambers of commerce are urging the city authorities to join them in providing funds for the establishment and endowment of a higher commercial institution independent of any existing higher seat of learning. There seems to be prevalent among the founders and supporters of higher commercial institutions in continental Europe a dislike to submit the professional education of merchants to the old established rules and methods of universities.

THE LEGAL STATUS OF SCHOOL BOARDS IN CITIES OF THE UNITED STATES.

The legal status of school boards in cities of 40,000 inhabitants or over in this country was made the subject of special inquiry in 1904 by circular letter to the superintendents of city schools. Ninety of the 92 letters of inquiry were answered and the items of information gleaned will be found in the following tables:

(1) In 48 cases out of 90, the name of the board which administers the public education of the city was found to be board of education (in one or two cases varied to board of public education). In 10 cases it is school board; in 11 cases, school committee; in 10 cases, board of school directors; in 3 cases, board of school commissioners; in 2 cases, board of trustees; in 2 cases, board of school inspectors; in 2 cases, board of control; and in one city (Buffalo) no separate board exists, the city council administering the schools.

(2) The greatest variety is found in the number of members of these boards. The results of the inquiry are as follows:

Four boards have 3 members, 8 boards have 5 members, 6 boards have 6 members, 12 boards have 7 members, 3 boards have 8 members, 10 boards have 9 members, 4 boards have 10 members, 1 board has 11 members, 6 boards have 12 members, 2 boards have 13 members, 3 boards have 14 members, 3 boards have 15 members, 1 board has 16 members, 1 board has 17 members, 1 board has 18 members, 1 board has 19 members, 4 boards have 20 members, 3 boards have 21 members, 1 board has 22 members, 1 board has 23 members, 3 boards have 24 members, 1 board has 25 members, 1 board has 27 members, 3 boards have 30 members, 1 board has 33 members, one board has 36 members, 1 board has 39 members, 1 board has 42 members, 1 board has 46 members, 1 board has 64 members, 1 board has 90 members.

(3) The members of the boards are chosen by popular vote in 63 cities at regular elections; in 1 or 2 cases at special elections. In a few cities only the votes of property owners are admitted. In 15 cases they are appointed by the mayor of the city; in 6 cases they are elected by the city council (sometimes by the common council alone); in 6 cases other ways are resorted to, such as appointment by courts, by local boards, or by the governor of the State.

(4) The members of the boards are selected from the city at large in 35 cases; from wards in 34 cases; from both in 13 cases, and from school districts in 8 cases.

(5) The term of office of members of the boards varies between two and seven years. It is two years in 21 cases; three years in 34 cases; four years in 20 cases; five years in 5 cases; six years in 7 cases; seven years in 1 case; from one to five years in 1 case, and in one city a part of the board is not elected or appointed for a specific term.

(6) Vacancies in the board are temporarily filled by the board itself in 38 cases; by appointment by the mayor in 22 cases; by the city council or board of aldermen in 12 cases;

Digitized by Google

by joint conventions of the board of aldermen and the school board in 9 cases. Other modes are resorted to in 10 cases. These show, however, that the principle is adhered to to let the same authority make the selection which made the original appointment or selection.

(7) The principal source of revenue for public schools is in all cases (90) local taxation, but in 41 cases the State and county are also mentioned as sources of school revenue.

(8) The maximum rate of tax could not be ascertained in all cases; many of the replies state that the law does not specify a maximum, only providing for "reasonable expenditures."

(9) The title to schoolhouses and property is vested in the board in 49 cases, in the city in 41 cases.

(10) The board is a legal corporation in 63 cases; in 27 cases it is not.

(11) The superintendent of schools is elected in 86 cases by the board, of which he is usually a professional adviser, but rarely, if ever, a voting member. In two cases he is elected by popular vote, and in 1 or 2 cases he is elected by local boards (i. e., not by the central city board), or appointed by the governor of the State.

(12) The superintendent's term of office varies between one and six years. In 26 cases it is one year; in 11 cases, two years; in 17 cases, three years; in 9 cases, four years; in 10 cases, five years; and in 1 case, six years. In 16 cases the term is not defined or is subject to the pleasure of the board.

(13) Authority to examine candidates for teachers' certificates is vested in the superintendent of city schools in 26 cases, in a special board of examiners in 27 cases, in a committee of the school board in 12 cases, and in county and State examiners in 8 cases. Where the board is the authority, the latter is usually delegated to the superintendent and his deputies, or to specialists among the principals of schools. The board of examiners, if such exist, also consists of professional men of distinction and reputation.

(14) Authority to appoint teachers is vested, as a rule, in the board of education, namely, in 71 cases. In 5 cases a committee of the board performs this duty, but its action is subject to the approval of the board. In 12 cases the superintendent appoints teachers, and in 2 cases local or district boards do so.

The new school code of Ohio specifies that in cities of 50,000 inhabitants or over the board of education shall consist of not less than 2 nor more than 7 members elected at large, and of not less than 2 nor more than 30 members elected from subdistricts or wards. It fixes the term of office of the members at four years and the maximum rate of tax for school purposes at 12 mills, but allows the board to go beyond that amount if the question be first submitted to the electors and by them decided in the affirmative. The code fixes the term of office of the superintendent at five years, leaves the authority to examine candidates for teachers' positions to the city board of examiners, and lays the duty of appointing the teachers upon the superintendent, subject to the approval of the board.

Summary of laws relating to the school boards of cities of 40,000 inhabitants or over —PART I.

City.	Population in 1900.	Name of school board.	Number of members.	How chosen.	Selected from city at large, wards, or school districts.	Term of office.	Vacancies in board are filled for the unexpired term.
Akron, Ohio	42,728	Board of education	16	By popular vote	From wards	4 years	By board itself.
Albany, N. Y	94,151	do	3	Appointed by mayor	From city at large	6 years	By mayor.
Allegheny, Pa	129,896	Board of controllers	(a)	By popular vote	From wards	3 years	By boards themselves.
Atlanta, Ga	89,872	Board of education	9	By city council	2 from city at large, 7 from wards.	5 years for 7, 2 years for 1, 1 or 2 years for 1.	By city council.
Baltimore, Md	508,957	Board of school commissioners.	9	By mayor, confirmed by second branch of city council.	From city at large	6 years	By mayor, confirmed by second branch of city council.

REQUIREMENTS AS TO VACCINATION OF SCHOOL CHILDREN IN CERTAIN CITIES.

City.	Regulation.	Authority.
Baltimore, Md.....	Vaccination or other protection against smallpox required.	Rules, 1901, Art. XIX, sec. 1.
Boston, Mass.....	Physician's certificate of successful vaccination or certificate showing that the health of child would be endangered by vaccination required. Record must be kept.	Rules (School Doc. No. 6—1904), Chap. XVI, sec. 230.
Cambridge, Mass.....	Physician's certificate of successful vaccination or that child is unfit subject for same.	Rules, 1901, Chap. IX, sec. 87.
Chicago, Ill.....	Physician's certificate of vaccination within seven years unless pupil has had varioloid or smallpox.	Rules and Regulations, 1898, p. 30.
Detroit, Mich.....	Certificate of successful vaccination required...	Manual, 1904 (revised to Jan. 1, 1905), rule 76 (a).
Haverhill, Mass.....	Physician's certificate of successful vaccination or that child is unfit subject for same.	Regulations, 1905, Chap. XI, sec. 1.
Jersey City, N. J.....	Successful vaccination required of both pupils and teachers.	Rules and Regulations (revision of January, 1904), Rule LXI.
Louisville, Ky.....	Satisfactory evidence of vaccination or other protection against smallpox required.	Manual, 1905, sec. 2, rule 11.
Newark, N. J.....	Physician's certificate of successful vaccination required unless pupil has had smallpox. Where insusceptibility to virus is claimed or demonstrated the matter is referred to committee for action.	Rules, 1904, Art. V, sec. 1 (a).
New Bedford, Mass....	No unvaccinated child admitted to the schools unless physician's certificate shows that he is not a fit subject for vaccination.	Rules and Regulations, 1902, chap. 44, sec. 6.
New Orleans, La.....	Physician's certificate of vaccination within seven years required of both pupils and teachers.	Rules, 1905, Art. V, sec. 1, (a) and (b).
Newton, Mass.....	Physician's certificate or other satisfactory evidence of vaccination unless child is unfit for same.	Rules, 1902, Chap. V, sec. 10
New York, N. Y.....	Physician's certificate of successful vaccination required of teachers, pupils, and janitors. The latter are also required to file semiannually certificates of vaccination of helpers and assistants and members of their families residing in school buildings. Principals must cooperate with agents of the board of health authorized to visit schools for the purpose of vaccinating pupils and teachers.	By-laws (amended to Jan. 27, 1904), sec. 46, arts. 1 and 2, and sec. 122, art. 2.
Paterson, N. J.....	Successful vaccination may be required by superintendent as a condition of admission (presumably when the danger of an epidemic warrants such a step).	Manual, 1901, page 40.
Philadelphia, Pa.....	Physician's certificate of successful vaccination or that pupil has had smallpox required. Principals required to report number of nonvaccinated pupils applying for admission.	Rules, 1903, Art. XXIII, sec. 1.
Providence, R. I.....	Physician's certificate of vaccination or other evidence of protection against smallpox required.	Rules, 1903, Art. XI, sec. 4.
Reading, Pa.....	Physician's certificate of successful vaccination required.	Manual, 1903, Sec. XIX, rule 2.
St. Louis, Mo.....	No child admitted unless vaccinated and sufficient evidence thereof presented to principal.	Rules, 1902, rule 49, Sec. VI.
San Francisco, Cal.....	Satisfactory evidence of vaccination required...	Rules, 1900, Sec. III.
Springfield, Ohio.....	Satisfactory evidence of vaccination must be given when required by board.	Rules and Regulations, 1903, rule 39.
Washington, D. C.....	Successful vaccination or other protection against smallpox required.	Rules, 1903, sec. 3.
Worcester, Mass.....	Physician's certificate of vaccination, or that child is an unfit subject for the same, required.	Rules, 1905, Chap. IX, sec. 8.

CHURCH (DENOMINATIONAL) SCHOOLS AND COLLEGES—PAROCHIAL SCHOOLS.

NOTE.—The following tables have been compiled from the data given in church almanacs and yearbooks; the classification of schools and students and phraseology adopted in each case by the editors of those publications have been uniformly followed. Statistics in detail of individual denominational institutions, as reported to this Office, may be found elsewhere in this Report, as follows: Theological schools, Chapter XXVII, Table 9; universities and colleges, Chapter XXV, Tables 30 to 36; secondary schools, Chapter XXIX, Table 44.

II.—PROTESTANT EPISCOPAL.

[From Whittaker's Churchman's Almanac, 1905.]

Number of theological schools, 16. Of these, 15 have 434 students; 12 have 3,887 alumni; 4 have property and endowment funds to the value of $2,439,963.

There are 7 educational aid societies, organized principally to furnish assistance to theological students; 77 students were aided last year by 3 societies.

Number of universities and colleges, 6. Of these, 5 have 89 students and 968 alumni. These figures do not include Columbia University, New York City (founded 1754), whose charter requires its president to be a member of the Church of England and certain church services to be performed, but which "further than this is not distinctively an institution of the Protestant Episcopal Church."

There are also 3 halls at universities (Michigan, West Virginia, and Fisk), two of which have 40 students each.

Schools and orphan asylums of the Protestant Episcopal Church.

State or Territory.	Schools for boys.			Schools for girls.			Orphanages and homes for children.

[a] Including one institution exclusively for women.
[b] No report from one school.
[c] Including the Ohio Northern University, classed as a normal school.
[d] Including Chicago Training School.

Digitized by Google

The Freedmen's Aid and Southern Education Society maintained during the year 44 schools, mostly included in the foregoing table, 23 of which, with an attendance of 6,711, were among the colored people, and 21, with an attendance of 3,928, were among the white people, making a total attendance of 10,639.

Thirteen orphanages and homes for children are reported; in these more than 1,300 inmates were cared for during the year. The day school of the Five Points Mission had an average attendance of 563.

The Methodist Church also sustains 12 institutions for training in church work at home and in foreign lands.

IV.—PRESBYTERIAN.

[From the Minutes of the General Assembly, 1901.]

THEOLOGICAL SEMINARIES.

Number	12
Instructors:	
Professors	70
Other teachers	22
Students:	
Matriculated	248
Graduated	153
Post-graduates	31
Number in attendance	622
Libraries:	
Volumes added	9,416
Whole number of books	249,344
Financial:	
Real estate	$2,166,280
General endowment	3,580,288
Professorship endowment	384,461
Scholarship fund	897,763
Lectureship fund	21,344
Library fund	129,328
Special funds	413,236
Income for the year	338,563
Expenses for the year	340,476

AIDED COLLEGES AND ACADEMIES.

Number	26
Net property	$1,841,382
Total students	3,904
College students	607
Academic or preparatory students	1,821
Students in classical study	1,278
Students in systematic Bible study	3,040
Students, church members	2,165
Students meaning to be ministers or missionaries	198

The board of aid for colleges and academies reports receipts of $186,262 in 1903–4.

WORK AMONG THE FREEDMEN.

The board of missions for freedmen reports 91 schools under its care, having 304 teachers and 11,763 pupils. Of the 91 schools, 65 are "parochials," and the remainder boarding schools, academies, institutes, etc.

VII.—UNITARIAN.

[From the Unitarian Year Book, 1904.]

Theological schools, 2, viz, Divinity School of Harvard University, and Meadville, Pa., Theological School.

Academies, 7, of which 5 are in Massachusetts and 1 each in New Hampshire and New York.

Industrial schools, 2, at Roxbury and Dorchester, Mass., the latter for girls only.

With the aid of the Frothingham fund ($20,000) the American Unitarian Association aids schools for the colored people at the South.

VIII.—JEWISH.

[From the American Jewish Year Book, 1904-5.]

The Jewish Theological Seminary of America, New York, N. Y., enrolled 38 students in 1903–4.

The Hebrew Union College, Cincinnati, Ohio, enrolled 10 in the preparatory and 27 in the collegiate department in 1903–4.

The Baron de Hirsch fund (capital $4,000,000, income about $160,000) maintains, among other instrumentalities in aid of the Jews, the Baron de Hirsch Trade School, New York City, which graduated 98 students in 1904, and the Baron de Hirsch Agricultural and Industrial School, Woodbine, N. J., which had an enrollment of 182 in 1903–4.

The Portland, Oreg., section of the Council of Jewish Women maintains a manual-training school.

The National Farm School, Doylestown, Pa, opened the school year of 1903–4 with 34 students.

Other institutions: Hebrew Technical Institute and Hebrew Technical School for Girls, New York City; Hebrew Industrial School, Boston; Jewish Training School, Chicago; Manual Training School, New Orleans.

At the third biennial meeting of the National Conference of Jewish Charities, at New York City, May, 1904, 75 organizations were represented.

IX.—REFORMED CHURCH IN AMERICA.

[Compiled from the Proceedings of the General Synod, June, 1904.]

Theological Seminary at New Brunswick, N. J.
Western Theological Seminary, Holland, Mich.
Hope College, Holland, Mich.
Northwestern Classical Academy, Orange City, Iowa.
Pleasant Prairie Academy, Peoria, Ill.
Wisconsin Memorial Academy.

Four parochial schools were assisted by the church board of education during the year, 1 in New York and 3 (colored) in South Carolina, the 4 having a combined average attendance of 215.

X.—UNITED BRETHREN IN CHRIST.

[From United Brethren Year Book, 1905.]

Western College, Toledo, Iowa.
York College, York, Nebr.; enrollment, 364.
Lebanon Valley College, Annville, Pa.; enrollment, 455; assets, $250,000.
Philomath College, Philomath, Oreg. Nineteen diplomas were granted last year.
Westfield College, Westfield, Ill.
Otterbein University, Westerville, Ohio.
Campbell College, Holton, Kans.; enrollment, about 400.
Union Biblical Seminary, Dayton, Ohio.

Digitized by Google

Erie Conference Seminary, Sugargrove, Pa.
Shenandoah Collegiate Institute, Dayton, Va.
Washington Seminary, Huntsville, Wash.
Edwards Collegiate Institute.

XI.—UNITED EVANGELICAL.

[From the Evangelical Almanac and Year Book, 1905.]

Albright College, Myerstown, Pa.
Western Union College, Le Mars, Iowa.
Dallas College and Lacreole Academy, Dallas, Oreg.

SUNDAY SCHOOL STATISTICS OF NORTH AMERICA.

[From the report of Marion Lawrance, General Secretary for the Eleventh International Sunday School Convention, Toronto, Canada, June 23-27, 1905.]

Statistics presented to the several international Sunday-school conventions.

	Sunday Schools.	Teachers.	Scholars.	Total.
Baltimore (May 11-13, 1875):				
United States	64,871	753,060	5,790,683	6,543,743
Canada	4,401	35,745	271,381	407,126
Atlanta (Apr. 17-19, 1878):				
United States	78,046	853,100	6,504,054	7,357,154
Canada	5,395	41,693	339,943	381,636
Toronto (June 22-24, 1881):				
United States	84,730	932,283	6,820,835	7,753,118
British America	5,640	42,912	356,330	399,242
Louisville (June 11-13, 1884):				
United States	98,303	1,043,718	7,668,833	8,712,851
British America	5,213	45,511	387,966	433,477
Chicago (June 1-3, 1887):				
United States	99,860	1,108,265	8,048,462	9,156,727
British America	6,448	52,938	440,983	493,921
Pittsburg (June 24-27, 1890):				
United States	108,939	1,151,340	8,649,131	9,800,471
British America	7,020	58,086	497,113	555,199
St. Louis (Aug. 31-Sept. 2, 1893):				
United States	123,173	1,305,939	9,718,432	11,024,371
British America	8,745	71,796	599,040	670,837
Boston (June 23-26, 1896):				
United States	132,639	1,396,508	10,890,092	12,286,600
British America	9,450	79,861	666,714	746,575
Atlanta (Apr. 26-30, 1899):				
United States	137,293	1,399,711	11,327,858	12,727,569
British America	10,527	81,874	680,208	732,082
Mexico	319	723	9,259	9,982
Denver (June 26-30, 1902):

Triennial Statistical Report made to the Eleventh International Sunday School Convention, Toronto, Canada, June 23–27, 1905.

[It is not claimed that these statistics are complete or accurate. They are the sum of such statistics as have been sent in from the States, Provinces, and Territories. They may safely be regarded as conservative. All reports made to the international convention include the Sunday schools of the colored people.]

United States.	Sunday schools.	Membership.			Gain since last report.	Loss since last report.	Date of this report.	Remarks.

Triennial report on condition of organization made to the Eleventh International Sunday School Convention, Toronto, Canada, June 23–27, 1905.

[It is not claimed that these statistics are complete or accurate. They are the sum of such statistics as have been sent in from the States, Provinces, and Territories. They may safely be regarded as conservative. Quite a number of States have done more or less house visitation, but the reports were too incomplete to justify printing. Eighty-eight cities, however, have been canvassed.]

State and country.	Organization.					Primary unions.	Primary departments with separate rooms.	Home departments.	Membership home departments.	Normal classes.	Membership normal classes.	Normal graduates past year.	Cradle rolls.	Membership cradle rolls.	Schools observing decision day.	L. B. R. A. membership.	Paid workers full time.	Paid workers part time.	Teacher meetings. STATISTICS FROM COLORED SUNDAY SCHOOLS.

In our present condition of organization it is quite impossible to secure accurate statistics of the colored Sunday schools. They are included in the statistics for the white schools in the preceding tables. We have now fairly good organization in North and South Carolina, likewise in Georgia and Alabama, and a partial organization in Virginia—all under the general direction of our negro field workers.

WHAT OUR STATISTICS SHOW.

1. A very slight gain in the number of Sunday schools and in the total enrollment.
2. Much inaccuracy in the reports, as shown by the fact that no less than 12 States report a gain or loss of about 40,000 each as compared with the last statistics presented, while one State shows a gain of 117,000 and another shows a loss of 237,000. These figures simply mean great inaccuracy somewhere, either with present or former reports.
3. An increase in the number of States organized.
4. That we have held about 14,000 Sunday school conventions during the past year, or probably 40,000 conventions during the triennium.
5. A considerable falling off in the number of primary unions.
6. Nearly 12,000 primary departments reporting separate rooms.
7. A gain of about 25 per cent in the home department.
8. A gain of about 100 per cent in the membership of the teacher training classes.
9. A gain of 120 per cent in the number of teacher training graduates.
10. Nine thousand seven hundred and ninety-three cradle rolls reporting, with 198,223 members.
11. Three thousand five hundred and sixty-four schools observing decision day.
12. Nineteen States and provinces reporting temperance departments. The Dominion of Canada leads in this department.
13. Eighteen States report 3,337 International Bible Reading Association members.
14. Eighty-nine workers are employed by our associations on full time and 59 on part time.
15. There is a gain of 30 per cent in the number of teachers' meetings.
16. The additions to the churches from the Sunday schools show up better than before, even with many States not reported.

SOCIAL SETTLEMENTS IN THE UNITED STATES.

[From Social Progress: a Year Book and Encyclopedia of Economic, Industrial, Social and Religious Statistics. Edited by Dr. Josiah Strong. The Baker & Taylor Co., New York. 1905.]

We print as follows statistics of 115 settlements in the United States. It is not a complete list, but is all from which we have had returns, and is a very large proportion of the whole. The statistics, too, are not complete in all details, but afford a large amount of information. Some of the queries have been differently understood by various settlements, but we give their answers as made to us. The fact, however, must be remembered in making comparison between settlements. Nor must too much attention be given to the numbers. Miss Addams writes us protesting against the tendency to identify the settlement with its machinery. This protest is needed. It is the life, not the wheels, that counts. Yet wheels help, provided the life is in them, and it may be an inspiration to know that 748 persons are residents in settlements besides those not reporting, and that at least 128 men and 370 women give all their time to settlement work; that these settlements report 1,558 clubs and 1,573 classes with 95,744 attendants; that $2,652,900 are invested in 66 settlements, and that 95 settlements spend annually $677,146, which would be some $800,000 per year for all settlements. The reports for the kindergarten work are quite incomplete, through a fault in the blank sent out.

THE CARNEGIE INSTITUTION.

[In Chapter XXIII of the Commissioner's Report for 1901 was published an account of the foundation of the Carnegie Institution, including the deed to the trustees by Mr. Carnegie, the articles of incorporation, the remarks of Mr. Carnegie defining his purpose in founding the Institution, and an article by Dr. Daniel C. Gilman, its first president, outlining the method proposed by the trustees of the Institution to carry out the purpose of the founder. The present publication gives an account of the completed organization of the Institution, and the means it has adopted for scrutinizing and directing the various scientific investigations which have been proposed, together with grants made by it from its beginning to the end of 1904, which illustrate the scope of its activities. This matter is taken from the successive yearbooks published by the Institution from 1902 to 1904.]

Extracts from the Proceedings of Executive Committee for 1902.

Advisory committee.—As soon as it was organized the executive committee, in compliance with the instruction of the trustees, began an investigation to determine what work should be entered upon in the immediate future by the institution. Its first step consisted in the appointment of advisory committees. Eighteen such committees were appointed as follows:

Anthropology.	Geography.	Physics.
Astronomy.	Geophysics.	Physiology (including toxicology).
Bibliography.	Geology.	Psychology.
Botany.	History.	Zoology.
Chemistry.	Mathematics.	
Economics.	Meteorology.	
Engineering.	Paleontology.	

These advisors were requested to give the committee their views on various important suggestions received by the Institution, and to make independent recommendations originating in the committees.

A circular letter was also prepared and sent to nearly a thousand scientific men and investigators of prominence, mainly in the United States. This was accompanied by a pamphlet

Digitized by Google

that included the articles of incorporation, the founder's address, and a list of the officers. The circular letter requested suggestions, opinions, and advice.

The trust deed enumerates several aims, all of which may be grouped under two heads, viz:

(A) To promote original research.

(B) To increase facilities for higher education.

Principles.—It is the judgment of the executive committee that the aims enumerated can be best carried into effect under the following principles, which are to be departed from only in very exceptional cases:

The Institution proposes to undertake—

(A) To promote original research by systematically sustaining—

(*a*) Projects of broad scope that may lead to the discovery and utilization of new forces for the benefit of man, pursuing each with the greatest possible thoroughness.

(*b*) Projects of minor scope that may fill in gaps in knowledge of particular things or restricted fields of research.

(*c*) Administration of a definite or stated research under a single direction by competent individuals.

(*d*) Appointment of research assistants.

(B) To increase facilities for higher education by promoting—

(*a*) Original research in universities and institutions of learning by such means as may be practicable and advisable.

(*b*) The use by advanced students of the opportunities offered for special study and research by the Government bureaus in Washington.

The Institution does not propose to undertake—

(*a*) To do anything that is being done well by other agencies.

(*b*) To do that which can be better done by other agencies.

(*c*) To enter the field of existing organizations that are properly equipped or are likely to be so equipped.

(*d*) To give aid to individuals or other organizations in order to relieve them of financial responsibilities which they are able to carry, or in order that they may divert funds to other purposes.

(*e*) To enter the field of applied science except in unusual cases.

(*f*) To purchase land or erect buildings for any organization.

(*g*) To aid institutions when it is practicable to accomplish the same result by aiding individuals who may or may not be connected with institutions.

(*h*) To provide for a general or liberal course of education.

The committee is of the opinion that organization in Washington should be provided for by—

(*a*) Purchasing in the northwestern suburb of the city a tract of ground suitable for present and future needs.

(*b*) Erecting thereon a central administration building, to serve as the administrative headquarters of research work conducted, directed, or aided by the Carnegie Institution.

(*c*) Establishing such laboratories from time to time as may be deemed advisable.

(*d*) Employing the best qualified men that can be secured for carrying on such research work as it may be decided to undertake in Washington.

(*e*) Continuing and developing the present office organization as the executive committee may find it necessary to do in order to properly conduct the work of the Institution.

The only organization outside of Washington to be provided for at present should be such advisors and advisory committees as may from time to time be found necessary in connection with the development of the research work of the Institution. It is the opinion of the committee that such persons and committees should be largely advisory and not executive in their function. Executive work should be in charge of paid employees of the Institution. These may be officers, research associates, and special employees.

Digitized by Google

Policy.—Soon after the executive committee began its investigations it became evident that two lines of policy were open, namely:

(*a*) To sustain broad researches and extended explorations that will greatly add to knowledge.

(*b*) To make small grants.

Research may be defined as original investigation in any field, whether in science, literature, or art. Its limits coincide with the limits of the knowable. In the field of research, the function of the Institution should be organization, the substitution of organized for unorganized effort wherever such combination of effort promises the best results; and the prevention, as far as possible, of needless duplication of work. Hitherto, with few exceptions, research has been a matter of individual enterprise, each worker taking up the special problem which chance or taste led him to and treating it in his own way. No investigator, working single-handed, can at present approach the largest problems in the broadest way thoroughly and systematically.

In the opinion of the committee, the most effective way to discover and develop the exceptional man, is to put promising men upon research work under proper guidance and supervision. Those who do not fulfill their promise will soon drop out, and by the survival of the fittest the exceptionally capable man will appear and be given opportunity to accomplish the best that is in him. When the genius is discovered, provide him with the best equipment that can be obtained.

In making grants, the wisest policy appears to be to make them to individuals for a specific purpose rather than to institutions for general purposes.

Since the second meeting of the trustees, on November 25, 1902, the executive committee has made the following grants in the several departments of science mentioned; anthropology, mathematics, and other branches will be acted upon later:

Astronomy	$21,000	Investigation of natural history projects.	$5,000
Bibliography	15,000	Marine biological research	12,500
Botany	11,700	Paleontology	1,900
Chemistry	3,000	Physics	4,000
Economics	15,000	Physiology	5,000
Engineering	4,500	Psychology	1,600
Exploration	5,000	Publications	5,500
Geology	12,000	Research assistants	25,000
Geophysics	8,500	Student research work in Washington	10,000
History	5,000	Zoology	4,000
Investigation of project for southern and solar observatory	5,000	Total	185,200
Investigation of project for physical and geographical laboratories	5,000		

Extracts from the Report of Executive Committee on the Work of the Year 1903.

GRANTS MADE AND REPORTS THEREON.

At the last annual meeting the trustees set apart $200,000 for grants for research during the fiscal year 1902–3. The following is a list of grants made by the executive committee under such authority. Each one is accompanied by a brief statement of the result thus far obtained. When an investigation is completed a final report will be submitted by the grantee. This may be printed either in abstract or in full in the Year Book.

ANTHROPOLOGY.

G. A. Dorsey, Field Columbian Museum, Chicago, Ill. Grant No. 43. For ethnological investigation among the Pawnees $2,500

William H. Holmes, Director Bureau of American Ethnology, Washington, D. C. Grant No. 44. For obtaining evidence relative to the early history of man in America .....

George F. Kunz, New York City. Grant No. 52. To investigate the precious stones and minerals used in ancient Babylonia in connection with the investigation of Mr. William Hayes Ward 500

William Hayes Ward, New York City. Grant No. 50. For study of oriental art recorded on seals, etc., from western Asia 1,500

Digitized by Google

ASTRONOMY.

Lewis Boss, Dudley Observatory, Albany, N. Y. Grant No. 7. For astronomical observations and computations $5,000
Boss, Hale, and Campbell. Grant No. 70. For investigating proposal for a southern and a solar observatory 5,000
W. W. Campbell, Lick Observatory, Mount Hamilton, Cal. Grant No. 53. For pay of assistants to take part in researches at the Lick Observatory 4,000
Herman S. Davis, Gaithersburg, Md. Grant No. 11. For a new reduction of Piazzi's star observations 500
George E. Hale, Yerkes Observatory, Williams Bay, Wis. Grant No. 13. For measurements of stellar parallaxes, solar photographs, etc 4,000
Simon Newcomb, Washington, D. C. Grant No. 17. For determining the elements of the moon's motion and testing the law of gravity 3,000
E. C. Pickering, Harvard University, Cambridge, Mass. Grant No. 20. For study of the astronomical photographs in the collection of Harvard University 2,500
William M. Reed, Princeton Observatory, Princeton, N. J. Grant No. 54. For pay of two assistants to observe variable stars 1,000
Mary W. Whitney, Vassar College, Poughkeepsie, N. Y. Grant No. 23. For measurement of astronomical photographs, etc 1,000

BIBLIOGRAPHY.

Robert Fletcher, Army Medical Museum, Washington, D. C. Grant No. 30. For preparing and publishing the Index Medicus 10,000
Herbert Putnam, Washington, D. C. Grant No. 56. For preparing and publishing a handbook of learned societies 5,000

BOTANY.

W. A. Cannon, New York Botanical Garden, New York. Grant No. 27. For investigation of plant hybrids 500
H. S. Conard, University of Pennsylvania, Philadelphia. Grant No. 8. For study of types of water lilies in European herbaria 300
Desert Botanical Laboratory (F. V. Coville and D. T. MacDougal, Washington, D. C.). Grant No. 26 8,000
E. W. Olive, Crawfordsville, Ind. Grant No. 32. Researches on the cytological relations of the Amœbæ, Acrasiæ, and Myxomycetes 1,000
Janet Perkins, working at the Royal Botanical Gardens, Berlin, Germany. Grant No. 19. For preliminary studies on the Philippines flora .....

CHEMISTRY.

John J. Abel, Johns Hopkins University, Baltimore, Md. Grant No. 24. For study of the chemical composition of the suprarenal gland 1,000
W. D. Bancroft, Cornell University, Ithaca, N. Y. Grant No. 6. For a systematic chemical study of alloys, beginning with the bronzes and brasses 500
L. M. Dennis, Cornell University, Ithaca, N. Y. Grant No. 42. For investigation of the rare earths 1,000
H. C. Jones, Johns Hopkins University, Baltimore, Md. Grant No. 39. For investigations in physical chemistry 1,000
H. N. Morse, Johns Hopkins University, Baltimore, Md. Grant No. 34. For researches on osmotic pressure 1,500
A. A. Noyes, Massachusetts Institute of Technology, Boston, Mass. Grant No. 45. For certain chemical investigations 2,000
Theo. W. Richards, Harvard University. Grant No. 41. For investigation of values of atomic weights, etc 2,500
J. Bishop Tingle, Illinois College, Jacksonville, Ill. Grant No. 40. For continuing investigations on the derivatives of camphor and allied bodies 500

ENGINEERING.

W. F. Durand, Cornell University, Ithaca, N. Y. Grant No. 64. For experiments on ship resistance and propulsion 4,120
Leonard Waldo, New York City. Grant No. 22. For study of aluminum bronzes 4,500

EXPLORATION.

Raphael Pumpelly, Newport, R. I. Grant No. 37. For preliminary examination of the trans-Caspian region 6,500

Digitized by Google

GEOPHYSICS.

Frank D. Adams, McGill University, Montreal, Canada. Grant No. 4. For investigating the flow of rocks $2,500
C. R. Van Hise, University of Wisconsin, Madison, Wis. Grant No. 71. For investigating the subject of geophysical research, etc 2,500

GEOLOGY.

T. C. Chamberlin, University of Chicago, Chicago, Ill. Grant No. 31. For study of the fundamental principles of geology 6,000
Bailey Willis, U. S. Geological Survey, Washington, D. C. Grant No. 72. For geological exploration in eastern China 12,000
Worthington C. Ford, Washington, D. C. Grant No. 28. For an examination of the historical archives of Washington 2,000

PALEONTOLOGY.

E. C. Case, State Normal School, Milwaukee, Wis. Grant No. 46. For continuation of work on the morphology of Permian reptiles 500
O. P. Hay, American Museum of Natural History. Grant No. 14. For monographing the fossil Chelonia of North America 2,200
G. R. Wieland, Yale University, New Haven, Conn. Grant No. 48. For continuation of his researches on living and fossil cycads 1,500
S. W. Williston, University of Chicago, Chicago, Ill. Grant No. 49. For preparing a monograph on the Plesiosaurian group 800

PHYSICS.

Henry Crew, Evanston, Ill. Grant No. 10. For study of certain arc spectra 1,000
A. A. Michelson, University of Chicago, Ill. Grant No. 47. For aid in ruling diffraction gratings 1,500
Harold Pender, Johns Hopkins University, Baltimore, Md. Grant No. 18. For experiments on the magnetic effect of electrical connection 750
R. W. Wood, Johns Hopkins University, Baltimore, Md. Grant No. 25. For research, chiefly on the theory of light 1,000

PHYSIOLOGY.

W. O. Atwater, Wesleyan University, Middletown, Conn. Grant No. 5. For experiments in nutrition 5,000
Arthur Gamgee, Montreux, Switzerland. Grant No. 62. For preparing report on the physiology of nutrition 6,500

PSYCHOLOGY.

G. Stanley Hall, Clark University, Worcester, Mass. Grant No. 61. For certain investigations on the anthropology of childhood 2,000
E. W. Scripture, Yale University, New Haven, Conn. Grant No. 21. For researches in experimental phonetics 1,600

ZOOLOGY.

H. E. Crampton, Columbia University, New York. Grant No. 9. For determining the laws of variation and inheritance of certain lepidoptera 250
J. E. Duerden, Chapel Hill, N. C. Grant No. 12. For investigations of recent and fossil corals .. 1,000
C. H. Eigenmann, Indiana University, Bloomington, Ind. Grant No. 68. For investigating the blind fishes of Cuba 1,000
L. O. Howard, Department of Agriculture, Washington, D. C. Grant No. 38. For preparing manuscript and illustrations for a monograph on American mosquitoes 2,000
H. S. Jennings, University of Michigan, Ann Arbor, Mich. Grant No. 15. For experiments on the behavior of lower animals 250
C. E. McClung, Kansas University, Lawrence, Kans. Grant No. 16. For making a comparative study of the spermatogenesis of insect and other classes of arthropods, and if possible to determine the specific functions of the different chromosomes 500
E. B. Wilson, Columbia University, New York. Grant No. 36. For investigations in experimental embryology, etc., in Naples 1,000
H. V. Wilson, University of North Carolina, Chapel Hill, N. C. Grant No. 33. For morphology and classification of deep-sea sponges 1,000
Marine Biological Laboratory, Woods Hole, Mass.; J. Blakely Hoar, treasurer. Grant No. 35. For maintenance of twenty tables 10,000
Marine Biological Station, Naples, Italy. Grant No. 55. For maintenance of two tables 1,000

RESEARCH ASSISTANTS.

In pursuance of the policy approved by the trustees at their meeting in November, 1902, the sum of $25,000 was set aside by the executive committee for the purpose of assisting a certain number of young investigators who have shown exceptional ability and desire to pursue special lines of inquiry under the oversight of qualified guides more or less authoritative, according to the circumstances of each case.

Announcement of this plan was made by a printed circular, which was published in the winter of 1902–3 and addressed to the heads of universities, colleges, laboratories, and other scientific institutions.

In response to this announcement 127 applications were received. Twenty-five persons were selected from among the applicants. The specific subjects to which these 25 investigators proposed to direct their attention were distributed among the following branches of science: Astronomy, 1; botany, 2; chemistry, 2; economics, 1; geology, 2; history, 1; mathematics, 2; physics, 3; physiology, 2; psychology, 3; zoology, 6.

The geographical distribution of these students can not be very accurately stated, as their early homes are not known to the Carnegie Institution; but indications may be derived from a list of the colleges in which the preliminary academic training was received:

Augustana College.
Beloit College.
California, University of.
Columbia, University of.
Fukushima, Japan, Provincial High School.
Georgetown University.
Hamline College.
Johns Hopkins University.
Kentucky State College.
Lake Forest College.
Michigan, University of.
Oberlin College.
Pennsylvania College.
Pomona College.
Princeton University.
Stanford University.
Toronto, University of.
Vermont, University of.

It is also interesting to mention the places where their postgraduate studies were pursued:

Augustana College.
California, University of.
Cambridge, University of (England).
Chicago, University of.
Columbia University.
Cornell University.
Hamline College.
Harvard University.
Johns Hopkins University.
Kentucky State College.
Leipzig, University of.
Michigan, University of.
Pennsylvania, University of.
Princeton University.
Stanford University.
Wellesley College.
Wisconsin, University of.
Würzburg University.

PUBLICATIONS AUTHORIZED.

The publication of 11 scientific papers has been authorized:

1. The collected mathematical works of the astronomer George William Hill. It is estimated that these works will make 4 quarto volumes. About half of Volume I is printed.

2. Desert Botanical Laboratory of the Carnegie Institution, by F. V. Coville and D. T. MacDougal. This is an octavo containing 58 pages, 29 plates, and 4 text figures. Published.

3. New Method for Determining Compressibility, by T. W. Richards and W. N. Stull. This is an octavo of 45 pages and 5 text figures. Published.

4. Water Lilies—A Monograph of the Genus Nymphæa, by H. S. Conard. This is to be a quarto containing 28 plates (12 being colored) and about 80 text figures. The text figures are made, and contracts have been awarded for plates and text.

5. Fecundation in Plants, by D. M. Mottier. Manuscript received, and the drawings for text figures, about 300, have been made.

6. On the Behavior of Lower Organisms, by H. S. Jennings. Manuscript received and accepted for publication.

7. The Coral Siderastrea, by J. E. Duerden. Manuscript received and accepted for publication.

8. Catalogue of Double Stars, by S. W. Burnham. Manuscript ready for the press.

9. Chimera—A Memoir on the Embryology of Primitive Fishes, by Bashford Dean. Manuscript not received.

10. Bibliographic Index of North American Fungi, by W. G. Farlow. Will make 5 octavo volumes.

11. Results of Investigations of Poison of Serpents, by Doctors Simon Flexner and Hideyo Noguchi. Manuscript not received.

From the Report of Executive Committee on the Work of the Year 1904.

APPROPRIATIONS.

At the annual meeting of the board, December 8, 1903, the following appropriations were made for large projects:

Tropical Pacific exploration		$40,000
Department of experimental biology		70,000
Department of terrestrial magnetism		20,000
Trans-Caspian expedition, archeological exploration		18,000
Geophysical research		25,000
Investigation of mineral fusion and solution under pressure	$12,500	
Study of elasticity and plasticity of solid bodies upon finite deformation	7,500	
Preparation of a bibliography of geophysics	5,000	
Department of economics and sociology		30,000
Bureau of Historical Research		8,500
		211,500

SECONDARY GRANTS.

The following is a record of the grants, not already mentioned, made under the allotment of $200,000 for minor grants. A few reports on grants made in 1902–3 are included, as the work under them was continued into the fiscal year 1903–4:

George A. Dorsey, Field Columbian Museum, Chicago, Ill. Grant No. 97. For ethnological investigation among the tribes of the Caddoan stock $2,500

William H. Holmes, Director of Bureau of American Ethnology, Washington, D. C. Grant No. 44. For obtaining evidence relative to the history of early man in America 2,000

ARCHEOLOGY.

Frederick J. Bliss, New York, N. Y. Grant No. 99. For excavations in Syria and Palestine 1,500

George F. Kunz, New York, N. Y. Grant No. 52. To investigate the precious stones and minerals used in ancient Babylonia, in connection with the investigation of Mr. William Hayes Ward 500

W. Max Muller, Philadelphia, Pa. Grant No. 98. For investigating monuments of Egypt and Nubia 1,500

William Hayes Ward, New York. Grant No. 131. For a study of the oriental art recorded on seals, etc., from western Asia 1,500

ASTRONOMY.

Lewis Boss, Dudley Observatory, Albany, N. Y. Grant No. 100. For astronomical observations and computations 5,000

W. W. Campbell, Lick Observatory, Mount Hamilton, Cal. Grant No. 53. For pay of assistants in researches at Lick Observatory 4,000

Herman S. Davis, Gaithersburg, Md. Grant No. 102. For a new reduction of Piazzi's star observations 1,500

George E. Hale, Yerkes Observatory, Williams Bay, Wis. Grant No. 103. For measurements of stellar parallaxes, solar photographs, etc 4,000

Simon Newcomb, Washington, D. C. Grant No. 104. For determining the elements of the moon's motion and testing law of gravity 2,500

W. M. Reed, Princeton Observatory, Princeton, N. J. Grant No. 105. For pay of two assistants to observe variable stars 1,000

Henry N. Russell, Cambridge, England. Grant No. 2. For photographic determination of the parallaxes of stars 1,000

Solar Observatory, Mount Wilson, Cal., Dr. George E. Hale, director. Grants Nos. 70 and 185 .. 15,000

Mary W. Whitney, Vassar College, Poughkeepsie, N. Y. Grant No. 23. For measurement of astronomical photographs, etc 1,000

BIBLIOGRAPHY.

Robert Fletcher, Army Medical Museum, Washington, D. C. Grant No. 106. For preparing and publishing the Index Medicus 10,000

Ewald Flügel, Stanford University, California. Grant No. 146. For the preparation of a lexicon to the works of Chaucer 7,500

Herbert Putnam, Washington, D. C. Grant No. 107. For preparing and publishing a hand book of learned societies 5,000

Digitized by Google

BOTANY.

Desert Botanical Laboratory. Grant No. 108. Frederick V. Coville, Washington, D. C., and D. T. MacDougal, New York, N. Y., advisory committee $5,000

Burton E. Livingston, University of Chicago, Chicago, Ill. Grant No. 156. For investigations of the relations of desert plants to soil moisture and to evaporation 400

E. W. Olive, University of Wisconsin, Madison. Grant No. 132. For researches on the cytology of certain lower plants 1,000

V. M. Spalding, Tucson, Ariz. Grant No. 189. For investigation of absorption and transpiration of water by desert shrubs 600

CHEMISTRY.

John J. Abel, Johns Hopkins University, Baltimore, Md. Grant No. 109 (continuation of grant No. 24). For study of the chemical composition of the secretion of the suprarenal gland. 500

Wilder D. Bancroft, Cornell University, Ithaca, N. Y. Grant No. 140. For a systematic chemical study of alloys 500

Charles Baskerville, University of New York, New York City. Grant No. 113. For investigations of the rare earths 1,000

Gregory T. Baxter, Cambridge, Mass. Grant No. 154. For research upon the atomic weight of manganese 500

Moses Gomberg and Lee H. Cone, Ann Arbor, Mich. Grants Nos. 78 and 153. For study of triphenylmethyl and analogous compounds 500

H. C. Jones, Johns Hopkins University, Baltimore, Md. Grant No. 180. For investigations in physical chemistry 1,000

W. L. Miller, University of Toronto, Toronto, Canada. Grant No. 155. For the study of electric migrations in solutions of weak acids 500

H. N. Morse, Johns Hopkins University, Baltimore, Md. Grant No. 110. For development of a method for the measurement of osmotic pressure 1,500

A. A. Noyes, Massachusetts Institute of Technology. Grant No. 45. For researches upon: (1) Electrical conductivity of salts in aqueous solution at high temperatures; (2) Ionization of weak acids and bases and hydrolysis of their salts in aqueous solution at high temperatures; (3) Transference determinations in aqueous solutions of acids 1,000

Thomas B. Osborn, New Haven, Conn. Grant No. 192. For research on chemical substances yielded by proteids of the wheat kernel when decomposed by acids 1,500

Theodore W. Richards, Harvard University, Cambridge, Mass. Grant No. 112. For investigation of the value of atomic weights, etc 2,500

Henry S. Washington, Locust, N. J. Grant No. 95. For the chemical investigation of igneous rocks 1,200

ENGINEERING.

W. F. Durand, Stanford University, Cal. Grant No. 64. For experiments on ship resistance and propulsion 4,120

W. F. M. Goss, Purdue University, Lafayette, Ind. Grant No. 114. For a research to determine the value of high steam pressures in locomotive service 5,000

EXPERIMENTAL PHONETICS.

E. W. Scripture, Yale University, New Haven, Conn. Grant No. 121. For researches in experimental phonetics 2,700

GEOLOGY.

T. C. Chamberlin, University of Chicago, Chicago, Ill. Grant No. 115. For study of fundamental principles of geology 6,000

Bailey Willis, United States Geological Survey, Washington, D. C. Grant No. 116. For geological exploration in eastern China 12,000

GEOPHYSICS.

Frank D. Adams, McGill University, Montreal, Canada. Grant No. 117. For investigation on flow of rocks 1,500

G. K. Gilbert, Washington, D. C. Grant No. 126. For preparing plans for investigating subterranean temperatures 1,000

HISTORICAL RESEARCH.

Annie Heloise Abel, New Haven, Conn. Grant No. 191. For investigating the early Indian policy of the United States 150

William Wirt Howe, New Orleans, La. Grant No. 199. For preliminary inquiry into the subject of an investigation on legal history and comparative jurisprudence 1,000

Digitized by Google

MATHEMATICS.

Derrick N. Lehmer, Berkeley, Cal. Grant No. 190. For pay of assistants to make the entries in a table of smallest divisors $500

E. J. Wilczynski, Berkeley, Cal. Grant No. 135. For investigation of ruled surfaces, etc. Doctor Wilczynski is a research associate of the Carnegie Institute 1,800

PALEONTOLOGY.

Oliver P. Hay, American Museum of Natural History, New York, N. Y. Grant No. 118. For monographing the fossil chelonia of North America 3,000

G. R. Wieland, Yale University, New Haven, Conn. Grant No. 119. For continuation of researches on living and fossil cycads, and illustration of memoir on the structure of the latter .. 2,300

PHYSICS.

S. J. Barnett, Stanford University, Cal. Grant No. 149. For research on the electric displacement induced in a certain dielectric by motion in a magnetic field 250

William Campbell, Columbia University, New York, N. Y. Grant No. 179. For research on the heat treatment of some high-carbon steels 1,500

H. S. Carhart, University of Michigan, Ann Arbor, Mich. Grant No. 151. For preparation of material for standard cells, etc 500

C. D. Child, Colgate University, Hamilton, N. Y. Grant No. 194. For investigation of the ionization in the neighborhood of a mercury arc in a vacuum 50

Henry Crew, Evanston, Ill. Grant No. 10. For study of certain arc spectra 1,000

George E. Hale, Mount Wilson, Cal. Grant No. 152. For experiments on the use of fused quartz for the construction of optical mirrors 3,000

E. Percival Lewis, University of California, Berkeley, Cal. Grant No. 150. To investigate vacuum-tube spectra of gases and vapors 500

A. A. Michelson, University of Chicago, Chicago, Ill. Grant No. 47. For aid in ruling diffraction gratings 1,500

R. W. Wood, Johns Hopkins University, Baltimore, Md. Grant No. 120. For research, chiefly on the theory of light 500

PHYSIOLOGY.

W. O. Atwater, Wesleyan University, Middletown, Conn. Grant Nos. 134, 139, and 195. For investigations in nutrition 7,000

Russell H. Chittenden, Sheffield Scientific School of Yale University, New Haven, Conn. Grant No. 197. For a study of the minimal proteid requirement of the healthy man 1,500

Arthur Gamgee, Martreux, Switzerland. Grant No. 62. For preparing a report on the physiology of nutrition 6,500

Hideyo Noguchi, University of Pennsylvania, Philadelphia, Pa. Grant No. 94. For continuation of the studies on snake venoms 1,700

Edward T. Reichert and Amos P. Brown, University of Pennsylvania, Philadelphia, Pa. Grant No. 188. For research on the crystallography of hæmoglobin 1,000

ZOOLOGY.

A. J. Carlson, Stanford University, Cal. Grant No. 196. For research, on the physiology of the invertebrate heart 100

W. E. Castle and F. L. Mark, Museum of Comparative Zoology, Cambridge, Mass. Grant No. 136. For experimental studies in heredity 500

Henry E. Crampton, Columbia University, New York, N. Y. Grant No. 137. For determining the laws of variation and inheritance of certain lepidoptera 500

J. E. Duerden, University of Michigan, Ann Arbor, Mich. Grant No. 158. For continuation of investigation on the morphology and development of recent and fossil corals 1,500

Carl H. Eigenmann, University of Indiana, Bloomington, Ind. Grant No. 68. For investigation of blind fishes in Cuba 1,000

L. O. Howard, Department of Agriculture, Washington, D. C. Grant No. 122. For preparing a report on American mosquitoes 2,500

C. E. McClung, Kansas University, Lawrence, Kans. Grant No. 16. For making a comparative study of the spermatogenesis of insects, etc 500

William Patten, Hanover, N. H. Grant No. 157. For studies relating to the origin of vertebrates 500

Raymond Pearl, University of Michigan, Ann Arbor, Mich. Grant No. 125. For an investigation by statistical methods of correlation in variation 500

W. L. Tower, University of Chicago, Chicago, Ill. Grant No. 181. For an investigation of the potato beetles of Mexico 500

H. V. Wilson, University of North Carolina, Chapel Hill, N. C. Grant No. 33. For morphology and classification of deep-sea sponges 1,000

Digitized by Google

N. Yatsu, Columbia University, New York. Grant No. 138. Experimental studies of the Nemertine egg $500
Marine Biological Laboratory, Woods Hole, Mass. J. Blakely Hoar, treasurer. Grant No. 123. For maintenance of 20 tables 10,000
Naples Zoological Station, Naples, Italy. Grant No. 124. For maintenance of two tables 1,000

RESEARCH ASSISTANTS.

The policy in relation to Research Assistants, as outlined in Year Book No. 2 (1903), was continued, and twenty-five persons conducted investigations in the branches of science indicated:

C. E. Allen, Madison, Wis. Grant No. 159. For a study of the homologies of the gametophyte and sporophyte, etc $1,000
A. F. Blakeslee, Cambridge, Mass. Grant No. 160. For an investigation of sexuality in the lower fungi 1,000
W. W. Coblentz, Cornell University, Ithaca, N. Y. Grant No. 198. For investigation infra-red emission and absorption spectra 1,000
A. L. Dean, New Haven, Conn. Grant No. 161. For investigating the proteolytic enzymes of plants 1,000
L. E. Dickson, University of Chicago, Chicago, Ill. Grant No. 162. For certain mathematical investigations 1,000
H.W. Doughty, Johns Hopkins University, Baltimore, Md. Grant No. 174. For an investigation of camphoric acid, under the direction of Prof. A. A. Noyes 1,000
C. B. Farrar, Towson, Md. Grant No. 163. For psychological experiments at the Sheppard and Enoch Pratt Hospital 1,000
William Jones, New York, N. Y. Grant No. 173. For investigating the religion of the central group of Algonkian Indians 1,000
A. S. King, Bonn, Germany. Grant No. 164. For the production and study of emission spectra at high temperatures 1,000
P. A. Levene, New York, N. Y. Grant No. 165. For researches along the line of determining points in the constitution of proteids 1,000
R. S. Lillie, University of Nebraska, Lincoln, Nebr. Grant No. 166. For a study of the relation of ions to the various forms of protoplasmic movement 1,000
G. D. Louderback, San Francisco, Cal. Grant No. 167. For a study of the glaucophane and associated schists 1,300
F. E. Lutz, Bloomsburg, Pa. Grant No. 142. For study of organic evolution at Station for Experimental Evolution, Cold Spring Harbor, Long Island 1,000
U. B. Phillips, University of Wisconsin, Madison, Wis. Grant No. 193. For a study of the influence of plantation in political and social history of the South 300
F. E. Ross, Washington, D. C. Grant No. 168. For astronomical investigation, under Prof. Simon Newcomb 300
L. S. Rowe, University of Pennsylvania, Philadelphia, Pa. Grant No. 144. For a study of Mexican constitutional system 1,200
P. E. Sargent, Cambridge, Mass. Grant No. 175. For an investigation in comparative neurology 1,000
G. W. Scott, Philadelphia, Pa. Grant No. 141. For a study of private claims against foreign nations to which the United States has been a party 1,200
E. S. Shepherd, Cornell University, Ithaca, N. Y. Grant No. 176. For a systematic study of alloys, with especial reference to brasses and bronzes 1,000
G. H. Shull, University of Chicago, Chicago, Ill. Grant No. 143. For an investigation in heredity, hybridization, variation, mutation, etc 1,000
Mary Robert Smith, Palo Alto, Cal. Grant No. 194. For studying the history and social conditions of the Chinese immigration in California 1,000
Nettie M. Stevens, Bryn Mawr College, Bryn Mawr, Pa. Grant No. 177. For an investigation of problems relating to sex determination, etc 1,000
J. B. Whitehead, Johns Hopkins University, Baltimore, Md. Grant No. 178. For a study of the magnetic effect of electrical displacement 1,200
E. J. Wilczynski, Berkeley, Cal. Grant No. 135. For an investigation of ruled surfaces, etc 1,800
Fritz Zerban, Munich, Germany. Grant No. 169. For an investigation of rare earths, under the direction of Prof. C. Baskerville 1,000

PUBLICATION.

The following publications have been issued during the year: Year Book No. 2, 1903, Octavo, 371 pages.

Report of Committee on Southern and Solar Observatories. Extracted from Year Book No. 2. Octavo, 170 pages.

Digitized by Google

Desert Botanical Laboratory of Carnegie Institution. Publication No. 6. By F. V. Coville and D. T. MacDougal. Octavo, 58 pages, 29 plates.

New method of Determining Compressibility. Publication No. 7. By T. W. Richards and W. N. Stull Octavo, 45 pages, 5 text figures.

Contributions to Stellar Statistics. First paper. On the Position of the Galactic and Other Planes Toward which the Stars Tend to Crowd. Publication No. 10. By Simon Newcomb. Quarto, 30 pages.

Production of Sex in Human Offspring. Publication No. 11. By Simon Newcomb. Octavo, 34 pages.

The Action of Snake Venom upon Cold-Blooded Animals. Publication No. 12. By Hideyo Noguchi. Octavo, 16 pages.

The Influence of Granville on Pitt's Foreign Policy, 1787-1798. Publication No. 13. By E. D. Adams. Octavo, 79 pages.

Guide to the Archives of the Government at Washington. Publication No. 14. Octavo, 250 pages.

Fecundation in Plants. Publication No. 15. By D. M. Mottier. Octavo, 187 pages.

Contributions to the Study of the Lower Organisms. Publication No. 16. By H. S. Jennings. Octavo, 256 pages.

Traditions of the Arikara. Publication No. 17. By G. A. Dorsey. Octavo, 202 pages.

Researches on North American Acrididæ. Publication No. 18. By Albert P. Morse. Octavo, 56 pages, 8 plates.

FOREIGN STUDENTS IN HIGHER INSTITUTIONS OF LEARNING IN GERMANY.

The number of foreigners who were matriculated at the 21 German universities, not including technological, agricultural, mining, forestry, and veterinary colleges, during the winter of 1904–5, was 3,097. These figures show an increase of 333 over the preceding year, when 2,731 were enrolled. Of the number in 1904–5 (3,097), as many as 750 studied philosophy, philology, and history; 722 studied medicine; 651 mathematics and natural sciences; 366 studied law; 231 political economy and administration; 177 agriculture and forestry; 135 Protestant and 32 Catholic theology; 26 dentistry, and 17 pharmacy. The foregoing figures do not include the nonmatriculated hearers, of whom there are more than 3,000, but being irregular students, mostly foreigners, they do not figure on the rolls; they are, however, entitled to all the academic privileges, except that they can not compete with matriculated students in entering or passing State examinations.

As to the nationality of the matriculated foreigners in 1904–5, as many as 974 were Russians. Other European countries are represented by the following numbers: Austria-Hungary, 631; Switzerland, 314; Great Britain, 155; Bulgaria, 93; Roumania, 78; France, 67; Servia, 55; Greece, 54; the Netherlands, 43; Norway-Sweden, 40; Luxemburg, 39; Italy, 32; Spain, 28; Turkey, 28; Belgium, 14; Denmark, 10; Portugal, 5; Montenegro, 2. As many as 432 were from other continents (a decrease of 60). Of these 235 are Americans (against 514 in 1895); 110 are from Asia, almost all from Japan; 19 from Africa, and 8 from Australia.

In the year 1835–6 there were only 475 foreign students, or 4.02 per cent of the total number of university students in Germany. In 1870–71 there were 735, or 6.1 per cent. In 1880–81 the proportion had fallen to 5.16 per cent. In 1890–91 it again rose to 6.7 per cent; in 1900–1901 it was 7.3 per cent, and in 1901–2 it was 7.55 per cent; in 1903 it was 7.7; in the winter of 1903–4 it was 8.2 per cent, and in the winter of 1904–5 it was 8 per cent. Ten years ago America furnished the largest contingent, with 514 students, or 22 per cent of the total number of foreign students; now Russia leads with 974.

As regards the different universities, the following details as to the number of foreigners will show their relative rank:

Digitized by Google

Number of foreign students in German universities.

UNIVERSITIES.

	1904–5.	1903–4.		1904–5.	1903–4.
Berlin	1,154	878	Marburg	53	51
Leipzig	443	406	Würzburg	50	54
Munich	291	257	Giessen	48	53
Halle	173	146	Tubingen	40	30
Heidelberg	160	197	Greifswald	28	37
Gottingen	117	99	Erlangen	18	25
Freiburg	116	123	Rostock	16	14
Strassburg	89	66	Munster	12	13
Jena	80	79	Kiel	11	17
Bonn	71	67			
Konigsberg	71	75	Total	3,097	2,731
Breslau	56	41			

POLYTECHNICA.

	1904–5.	1903–4.		1904–5.	1903–4.
Munich	502	486	Aix-la-Chapelle	133	134
Darmstadt	545	475	Stuttgart	111	88
Karlsruhe	411	375	Brunswick	73	69
Berlin	361	314	Danzig	35	.....
Dresden	266	267			
Hanover	152	141	Total	2,589	2,355

The 5 veterinary schools had 60 matriculated foreign students in 1904–5; the 4 agricultural colleges 204; the 5 forestry academies 70; the 3 mining academies 296, and the 4 commercial universities 275; hence the total number of foreign students in German higher seats of learning was 6,631, as against 5,861 in the previous year. All these students were regular, that is, matriculated students.

In the same year the Austrian universities and other higher seats of learning in which German is the medium of instruction had 1,941 foreign students, while Switzerland had 2,366.

The United States contribute from 22 to 25 per cent of the foreign students in Germany, including the "hearers," that is, the special students who are not matriculated, but only 10 per cent of them are in the universities.

The Frankfurter Zeitung reported in December, 1904, that the number of foreign students at the French universities was steadily increasing. During the academic year 1903–4 the total was 2,510, and of these 1,003 were women. The Paris University alone reported 1,315 foreigners, among whom were 401 women. In Grenoble there were 223 foreigners, nearly all of these being Germans studying the French language; and in addition 352 non-French took part in the well-known vacation courses of this institution. Of the other French universities, Nancy reported 165 foreign students; Lyon, 87, and Bordeaux 86.

NOBEL PRIZES FOR SCIENTIFIC AND BENEVOLENT DISCOVERIES.

[The following extracts from the Code of Statutes of the Nobel Foundation, including the statutes and regulations concerning the distribution of prizes by the three institutions charged with awarding the same are taken from the official publication of the code in a pamphlet entitled Nobelstiftelsen (the Nobel Foundation), Stockholm, 1901. The matter here presented is somewhat more comprehensive than that published in Chapter XXVII of the Report for 1899–1900.]

STATUTES OF THE NOBEL FOUNDATION.

[Given at the Palace in Stockholm on the 29th day of June in the year 1900.]

OBJECTS OF THE FOUNDATION.

§ 1.

The Nobel Foundation is based upon the last will and testament of Dr. Alfred Bernhard Nobel, engineer, which was drawn up on the 27th day of November, 1895. The paragraph of the will bearing upon this topic is worded thus:

With the residue of my convertible estate I hereby direct my executors to proceed as follows: They shall convert my said residue of property into money, which they shall then invest in safe securities; the capital thus secured shall constitute a fund, the interest accruing from which shall be annually awarded in prizes to those persons who shall have contributed most materially to benefit mankind during the year immediately preceding. The said interest shall be divided into five equal amounts, to be apportioned as follows: One share to the person who shall have made the most important discovery or invention in the domain of physics; one share to the person who shall have made the most important chemical discovery or improvement; one share to the person who shall have made the most important discovery in the domain of physiology or medicine; one share to the person who shall have produced in the field of literature the most distinguished work of an idealistic tendency, and, finally, one share to the person who shall have most or best promoted the fraternity of nations and the abolishment or diminution of standing armies and the formation and increase of peace congresses. The prizes for physics and chemistry shall be awarded by the Swedish Academy of Science (Svenska Vetenskapsakademien) in Stockholm; the one for physiology or medicine by the Caroline Medical Institute (Karolinska Institutet) in Stockholm; the prize for literature by the Academy in Stockholm (i. e., Svenska Akademien), and that for peace by a committee of five persons to be elected by the Norwegian Storthing. I declare it to be my express desire that, in the awarding of prizes, no consideration whatever be paid to the nationality of the candidates, that is to say, that the most deserving be awarded the prize, whether of Scandinavian origin or not.

The instructions of the will as above set forth shall serve as a criterion for the administration of the foundation, in conjunction with the elucidations and further stipulations contained in this code, and also in a deed of adjustment of interests amicably entered into with certain of the testator's heirs on the 5th day of June, 1898, wherein, subsequently, upon the arriving at an agreement with reference to a minor portion of the property left by Doctor Nobel, they do affirm and declare, that:

By these presents we do acknowledge and accept Doctor Nobel's will, and entirely and under all circumstances relinquish every claim for ourselves and our posterity to the late Doctor Nobel's remaining property, and to all participation in the administration of the same, and also to the possession of any right on our part to urge any criticism upon the elucidations of, or additions to, the said will, or upon any other prescriptions with regard to the carrying out of the will or the uses to which the means accruing from the bequest are put, which may either now or at some future time be imposed for observance by the Crown or by those who are thereto entitled;

Subject, nevertheless, to the following express provisos:

(*a*) That the Code of Statutes which is to serve in common as a guide for all the corporations appointed to award prizes, and is to determine the manner and the conditions of the distribution of prizes appointed in the said will, shall be drawn up in consultation with a representative nominated by Robert Nobel's family, and shall be submitted to the consideration of the King;

Digitized by Google

(*b*) That deviations from the following leading principles shall not occur, viz:

That each of the annual prizes founded by the said will shall be awarded at least once during each ensuing five-year period, the first of the periods to run from and with the year next following that in which the Nobel Foundation comes into force, and

That every amount so distributed in prizes in each section shall under no consideration be less than 60 per cent of that portion of the annual interest that shall be available for the award, nor shall the amount be apportioned to more than a maximum of three (3) prizes.

§ 2.

By the "Academy in Stockholm," as mentioned in the will, is undertood the Swedish Academy (Svenska Akademien).

The term "literature," used in the will, shall be understood to embrace not only works falling under the category of polite literature, but also other writings which may claim to possess literary value by reason of their form or their mode of exposition.

By the proviso in the will to the effect that for the prize competition only such works or inventions shall be eligible as have appeared "during the preceding year" is to be understood that a work or an invention for which a reward under the terms of the will is contemplated shall set forth the most modern results of work being done in that of the departments, as defined in the will, to which it belongs; works or inventions of older standing to be taken into consideration only in case their importance have not previously been demonstrated.

§ 3.

Every written work, to qualify for a prize, shall have appeared in print.

§ 4.

The amount allotted to one prize may be divided equally between two works submitted, should each of such works be deemed to merit a prize.

In cases where two or more persons shall have executed a work in conjunction, and that work be awarded a prize, such prize shall be presented to them jointly.

The work of any person since deceased can not be submitted for award; should, however, the death of the individual in question have occurred subsequent to a recommendation having been made in due course for his work to receive a prize, such prize may be awarded.

It shall fall to the lot of each corporation entitled to adjudicate prizes to determine whether the prize or prizes they have to award might likewise be granted to some institution or society.

§ 5.

No work shall have a prize awarded to it unless it shall have been proved by the test of experience or by the examination of experts to possess the preeminent excellence that is manifestly signified by the terms of the will.

If it be deemed that not one of the works under examination attains to the standard of excellence above referred to, the sum allotted for the prize or prizes shall be withheld until the ensuing year. Should it even then be found impossible, on the same grounds, to make any award, the amount in question shall be added to the main fund, unless three-fourths of those engaged in making the award determine that it shall be set aside to form a special fund for that one of the five sections, as defined by the will, for which the amount was originally intended. The proceeds of any and every such fund may be employed, subject to the approval of the adjudicators, to promote the objects which the testator ultimately had in view in making his bequest in other ways than by means of prizes.

Every special fund shall be administered in conjunction with the main fund.

§ 6.

For each of the four sections in which a Swedish corporation is charged with adjudicating the prizes, that corporation shall appoint a committee—their Nobel committee—of three or five members, to make suggestions with reference to the award. The preliminary investiga-

Digitized by Google

tion necessary for the awarding of prizes in the peace section shall be conducted by the committee of the Norwegian Storthing, as laid down in the will.

To be qualified for election on a Nobel committee it is not essential either to be a Swedish subject or to be a member of the corporation that has to make the award. On the Norwegian committee persons of other nationalities than Norwegian may have seats.

Members of a Nobel committee may receive reasonable compensation for the labour devolving upon them as such, the amount to be determined by the corporation that appoints them.

In special cases, where it shall be deemed necessary, the adjudicating corporation shall have the right of appointing a specialist to take part in the deliberations and decisions of a Nobel committee, in the capacity of a member of the same.

§ 7.

It is essential that every candidate for a prize under the terms of the will be proposed as such in writing by some duly qualified person. A direct application for a prize will not be taken into consideration.

The qualification entitling a person to propose another for the receipt of a prize consists in being a representative, whether Swedish or otherwise, of the domain of science, literature, etc., in question, in accordance with the detailed stipulations obtainable from the corporations charged with adjudicating the prizes.

At each annual adjudication those proposals shall be considered that have been handed in during the twelve months preceding the 1st day of February.

§ 8.

The grounds upon which the proposal of any candidate's name is made must be stated in writing and handed in along with such papers and other documents as may be therein referred to.

Should the proposal be written in a language other than those of the Scandinavian group, or than English, French, German, or Latin, or should the adjudicators, in order to arrive at a decision upon the merits of a work proposed, be under the necessity of obtaining information as to the contents chiefly from a work written in a language for the understanding of which there is no expedient save such as involves a great expenditure of trouble or money, it shall not be obligatory for the adjudicators to pay further consideration to the proposal.

§ 9.

On "founder's day," the 10th of December, the anniversary of the death of the testator, the adjudicators shall make known the results of their award and shall hand over to the winners of prizes a cheque for the amount of the same, together with a diploma and a medal in gold bearing the testator's effigy and a suitable legend.

It shall be incumbent on a prize winner, wherever feasible, to give a lecture on the subject treated of in the work to which the prize has been awarded; such lecture to take place within six months of the founder's day at which the prize was won, and to be given at Stockholm or, in the case of the peace prize, at Christiania.

§ 10.

Against the decision of the adjudicators in making their award no protest can be lodged. If differences of opinion have occurred they shall not appear in the minutes of the proceedings nor be in any other way made public.

§ 11.

As an assistance in the investigations necessary for making their award, and for the promotion in other ways of the aims of the foundation, the adjudicators shall possess powers to establish scientific institutions and other organizations.

The institutions, etc., so established, and belonging to the foundation, shall be known under the name of "Nobel institutes."

Digitized by Google

§ 12.

Each of the Nobel institutes shall be under the control of that adjudicating corporation that has established it.

As regards its external management and its finances a Nobel institute shall have an independent status. Its property is not, however, on that account available for defraying the expenses of any establishments belonging to an adjudicating or any other corporation. Nor is it permissible for any scholar who is in receipt of a fixed salary as an official of a Swedish Nobel institute to occupy a similar position at any other institution at the same time, unless the King be pleased to permit it in a special case.

So far as the adjudicators of prizes deem it to be feasible, the Nobel institutes shall be established on one common site and shall be organized uniformly.

The adjudicating corporations are at liberty to appoint foreigners, either men or women, to posts at the Nobel institutes. * * *

THE ADMINISTRATION OF THE FOUNDATION.

§ 14.

The Nobel Foundation shall be represented by a board of control, located in Stockholm. The board shall consist of five members, one of whom, the president, shall be appointed by the King, and the others by the delegates of the adjudicating corporations. The board shall elect from their own members a managing director. * * *

§ 15.

The board shall administer the funds of the foundation as well as the other property, real and otherwise, belonging to it, in so far as such is common to all the sections.

It shall be a function of the board to hand over to the winners of prizes in accordance with the rules of the foundation, the prizes so won, and besides, to attend to the payment of all duly authorized expenses connected with the prize distribution, the Nobel institutes, and similar objects. It shall further be incumbent on the board to be of assistance in matters that are not of a scientific character to all those who have to do with the foundation where help is required. * * *

STATUTES CONCERNING THE DISTRIBUTION, ETC., OF PRIZES FROM THE NOBEL FOUNDATION BY THE ROYAL ACADEMY OF SCIENCE IN STOCKHOLM.

PRIZE DISTRIBUTION.

§ 1.

The right to hand in the name of a candidate for a prize, as directed in § 7 of the Code of Statutes of the Nobel Foundation, shall belong to:

1. Home and foreign members of the Royal Academy of Science in Stockholm.
2. Members of the Nobel committees of the physical and chemical sections as defined in the Code.
3. Scientists who have received a Nobel prize from the Academy of Science.
4. Professors, whether in ordinary or associate, of the physical and chemical sciences at the universities of Upsala, Lund, Christiania, Copenhagen, and Helsingfors, at the Caroline Medico-Chirurgical Institute and the Royal Technical College in Stockholm, and also those teachers of the same subjects who are on the permanent staff of the Stockholm University College.
5. Holders of similar chairs at other universities or university colleges to the number of at least six, to be selected by the Academy of Science in the way most appropriate for the just representation of the various countries and their respective seats of learning.
6. Other scientists whom the Academy of Science may see fit to select.

A determination as to the choice to be made of teachers and scientists, in accordance with sections 5 and 6 above, shall be arrived at before the close of each September. * * *

Digitized by Google

§ 6.

During the course of the month of September in each year the Nobel committees shall issue a circular to all those who are qualified, according to 1 above, summoning them to make nominations of candidates for prizes before the first day of February in the following year, such nominations to be supported by evidence, documentary and otherwise.

§ 7.

Before the close of September every year the Nobel committee shall present to the academy their opinion and proposals regarding the distribution of prizes.

That class in the academy which is therein concerned shall then express its views with regard to the proposals, before the expiration of the month of October at the latest. Should the class in question deem it necessary to call in the services of some qualified member of any other class to aid in drawing up their report they shall have authority to do so.

The final decision, devolving upon the academy, shall be arrived at within the lapse of the first half of November next ensuing.

§ 8.

The proceedings, verdicts, and proposals of the Nobel committees with reference to the prize distribution shall not be published or in any other way be made known. * * *

THE NOBEL INSTITUTE.

§ 12.

The Nobel Institute, which the Code authorizes the Academy of Science to establish, is to be so established primarily for the purpose of carrying out, where the respective Nobel committees shall deem requisite, scientific investigation as to the value of those discoveries in the domains of physics and chemistry which shall have been proposed as meriting the award of a Nobel prize to their authors.

The institute shall, moreover, as far as its means allow, promote such researches in the domains of the sciences named as promise to result in salient advantage.

§ 13.

The Nobel Institute shall consist of two sections, one for physical research and one for chemical research.

The buildings required for these two sections shall be erected on contiguous sites, and rooms for the sittings of the Nobel committees, as well as record rooms, libraries, etc., shall be constructed for the two in common.

§ 14.

The Nobel Institute shall be under the superintendence of an inspector, appointed by the Crown.

As president of each of the two sections of the Nobel Institute, the Academy of Science shall select, on the basis of recommendations from the class in the academy concerned, a scientist, either of Swedish or foreign extraction, who is possessed of an established reputation as an investigator and of a wide experience in, and grasp of, the branch of science which it is the function of the section to promote.

The presidents shall have the title of "professor."

The terms of appointment for the presidents shall be drawn up by the Academy on the basis of suggestion from the class in the academy concerned. * * *

§ 19.

Permission for other persons than those who are on the scientific staff of the institute to carry on research in its laboratories, etc., may be granted by the Nobel committee interested, yet only provided the researches are directed toward determining the scientific conditions upon which some discovery or some invention may be evolved.

Digitized by Google

SPECIAL FUNDS.

§ 20.

As soon as any special funds shall have been formed, in accordance with § 5 in the Code, the academy shall be entitled to distribute, out of the annual yield thereof, support for the furtherance, in directions the testator had ultimately in view in making his bequest, of any work in the domains of physical and chemical science that may be judged to be of significance either in a scientific or a practical regard.

Assistance of that kind shall by preference be accorded to such persons as shall have already attained, by their labours in the sciences named, to results that promise in their further development to prove worthy of the support of the Nobel Foundation.

Proposals for the awarding of assistance of the nature above indicated shall be made by the respective Nobel committees and submitted to the academy; it shall then rest with that body to consult the opinion of the class concerned and thereafter to determine on the case.

The income derived from the special funds may also be applied to the needs of the Nobel Institute. * * *

STATUTES CONCERNING THE DISTRIBUTION, ETC., OF PRIZES FROM THE NOBEL FOUNDATION BY THE CAROLINE MEDICO-CHIRURGICAL INSTITUTE IN STOCKHOLM.

PRIZE DISTRIBUTION.

§ 1.

All questions connected with the prize distribution shall be first dealt with by the Nobel committee for the medical section, constituted as prescribed in the Code, and shall be handed on by it to the professorial staff of the Caroline Institute for a final decision. * * *

§ 4.

Every year, during the month of September, the Nobel committee shall issue a circular to all those persons who are qualified, according to the stipulations given below, to make proposals of names for the receipt of prizes, requesting them to hand in such proposals before the expiration of the month of February next ensuing, together with the documentary evidence in support thereof.

§ 5.

The qualification requisite for the right to nominate candidates for the Nobel prize competition shall be held to be possessed by:

1. Members of the professorial staff of the Caroline Institute.
2. Members of the medical class in the Royal Academy of Science.
3. Those persons who shall have received a Nobel prize in the medical section.
4. Members of the medical faculties at the universities of Upsala, Lund, Christiania, Copenhagen, and Helsingfors.
5. Members of at least six other medical faculties, to be selected by the staff of the Caroline Institute in the way most appropriate for the just representation of the various countries and their respective seats of learning.
6. Scientists whom the said staff may see fit to select.

A determination as to the choice to be made of teachers and scientists, in accordance with sections 5 and 6, shall be made within the first half of the month of September, the initial proposal to emanate from the Nobel committee.

§ 6.

The nominations to the prize competition that shall have been handed in by persons duly qualified, as above detailed, during the course of each year counting from February 1 to February 1, shall be first dealt with by the Nobel committee, which shall arrange them and

Digitized by Google

hand them on, with the comments upon them it may see fit to make, to the professorial staff of the Caroline Institute within the first half of February.

The said staff shall thereupon, in the first half of March, appoint two additional members on the Nobel committee for the remaining portion of the civil year.

The said staff shall, moreover, be empowered to appoint one or more experts to take part as members in the deliberations and decisions of the Nobel committee, whenever it shall consider such a procedure necessary in any particular case.

§7.

The Nobel committee shall determine which of the works of those nominated shall be subjected to a special investigation, and shall undertake the doing of the same, being hereby empowered to employ the assistance needed.

The Nobel committee having handed in its decision within the month of April, the staff of the Caroline Institute shall determine at its first sitting in the month of May whether the works of any others of those nominated shall also be made the subject of special examination.

The work of a nominee shall be rejected if it be not decided to have it specially examined.

§8.

The Nobel committee shall hand in its verdict and proposals for the prize award to the staff of the Caroline Institute within the month of September.

§9.

The said professorial staff shall then fix a day in the month of October upon which to proceed to decide finally upon the prize award. * * *

THE MEDICAL NOBEL INSTITUTE.

§12.

The Medical Nobel Institute, which shall be under the superintendence of the chancellor of the universities of the country, shall be established and organized by decree of the staff of the Caroline Institute, when the said staff shall deem that the necessary means for the purpose are available.

A proposition for the establishing of this institute may be made by a member of either the staff or the Nobel committee. The Nobel committee shall first deal with a proposition to that end, preparatory to its being submitted to the professorial staff of the Caroline Institute for approval.

Until this Nobel Institute shall have entered upon its duties all particulars connected with its functions shall be submitted to the Crown for consideration and sanction.

THE SPECIAL FUND OF THE MEDICAL PRIZE SECTION.

§13.

The proceeds of this fund shall be devoted to promoting research in medical science, in other ways than by prize distribution, and to rendering the results of that research of practical use to mankind in directions in accord with what the testator ultimately had in view in making his bequest.

The revenue accruing from the fund shall not be appropriated for paying the salary of any official engaged at the Caroline Institute.

§14.

A proposition for the disposal of the proceeds of the fund may be made by a member either of the staff of the Caroline Institute or of the Nobel committee.

The staff shall debate and decide any such proposition after the board of administration of the institute has expressed an opinion upon it. * * *

The Distribution, etc., of Prizes from the Nobel Foundation by the Swedish Academy in Stockholm.

§1.

The right to nominate a candidate for the prize competition shall belong to: Members of the Swedish Academy and of the academies in France and Spain, which are similar to it in constitution and purpose; members also of the humanistic classes of other academies and of those humanistic institutions and societies that are on the same footing as academies; and teachers of æsthetics, literature, and history at university colleges.

The above regulation shall be publicly announced at least once every five years in some official or widely circulated journal in each of the three Scandinavian countries and in the chief countries of the civilized world.

§2.

The academy shall appoint at its Nobel Institute, which shall embrace a large library, chiefly of works in modern literature, not only a head librarian and one or more sublibrarians, but also, as far as needed, other officers and assistants of literary training, either with temporary or permanent posts, to discharge the work of preparing questions arising out of the prize competition prior to their treatment by the academy, to draw up reports concerning literary works of recent publication in foreign countries, and to translate from foreign languages when such work is required.

The Nobel Institute of the Swedish Academy shall be under the superintendence of an inspector appointed by the Crown, and under the immediate management of a member of the academy, to be chosen by that body.

§3.

The academy shall be empowered to employ the proceeds of the special fund in furthering, in such directions as the testator ultimately had in view in making his bequest, any work in the field of literature, whether carried on in Sweden or abroad, that may be considered to possess importance, more especially in those departments of culture which it is the function of the academy to tend and foster. * * *

Nobel Peace Prize.

All proposals of candidates for the Nobel peace prize, which is to be distributed December 10, 1905, must, in order to be taken into consideration, be laid before the Nobel committee of the Norwegian Parliament by a duly qualified person before the first of February of the same year.

Any one of the following persons is held to be duly qualified: (*a*) Members of the Nobel committee of the Norwegian Parliament; (*b*) members of Parliament and members of government of the different States; (*c*) members of the interparliamentary council; (*d*) members of the commission of the international peace bureau; (*e*) members of the institute of international law; (*f*) university professors of political science and of law, of history and of philosophy; and (*g*) persons who have received the Nobel peace prize.

The Nobel peace prize may also be accorded to institutions or associations.

According to the Code of Statutes, § 8, the grounds upon which any proposal is made must be stated and handed in, along with such papers and other documents as may therein be referred to.

According to § 3, every written work, to qualify for a prize, must have appeared in print.

For particulars, qualified persons are requested to apply to the office of the Nobel committee of the Norwegian Parliament, Victoria Terrasse 4, Kristiania.

NOTE.

The Royal Academy of Science (Kungl. Vetenskaps-Akademien) in Stockholm was founded in 1739. The statutes of its constitution at present in force date from the year 1850 (July 13). The functions of the academy are to encourage the pursuit and the development of the sciences and also to spread a knowledge of them by the circulation of printed scientific papers and monographs.

The academy, of which the King is the patron, numbers 100 Swedish and Norwegian members and 75 foreign ones. The home members are ranged in 9 classes, to wit: 1, pure mathematics; 2, applied mathematics; 3, practical mechanics; 4, physical sciences; 5, chemistry, geology, and mineralogy; 6, botany and zoology; 7, medical sciences; 8, technology, economics, and statistics; 9, general science and scientific pursuits.

The academy elects its president annually, but has several permanent officials, among whom the chief is the secretary, who has the details of the management under his care.

The Caroline Medical-Chirurgical Institute (Kungl. Karolinska Institutet) in Stockholm dates from 1815. The statutes now in force received the King's sanction on April 29, 1896. It corresponds to a university medical faculty and has the same standing as the medical faculties at Upsala and Lund. Theoretical and practical instruction in the medical sciences is imparted, and students are able to graduate at the institute.

The head of the institute is the rector, chosen from among their own number by the staff of professors for a term of three years; the management and control of the institute is vested in him. The professorial staff numbers at present 22.

The Swedish Academy (Svenska Akademien) in Stockholm, founded by King Gustavus III on the 20th of March, 1786, when it received the statutes of constitution still in force, devotes itself to the arts of elocution and poetry, its mission being to labor in the interests of the preservation of purity, force, and elevation of diction in the Swedish language both in scientific works and, more especially, in those products of pure literature that are embraced under the terms poetry and elocution in all their scope, not excluding those works that have the inculcation of religion for their purpose. It is part of the task of the academy to prepare for publication a dictionary of the Swedish language and likewise a grammar, besides issuing papers and treatises calculated to establish and cultivate good taste. The academy awards annual prizes to the winners of competitions in elocution and poetry. The membership of the academy is fixed at 18, all being Swedes; the King is its patron. The officials consist of a president, a chancellor, and a permanent secretary, all chosen from among the members.

The Nobel prizes for 1904 were awarded at Stockholm and Christiania on December 10, the anniversary of the death of Doctor Nobel, hence called "founder's day." The amount of each prize for 1904 was 140,858.51 crowns, equal to $37,750.08 and the recipients were as follows: Lord Rayleigh, professor of natural sciences at the Royal Institute, London, who took the prize in physics; Sir William Ramsey, professor at University College, London, who took the prize in chemistry; Ivan P. Pavlov, chief of the physiological laboratory at the Institute for Experimental Medicine, St. Petersburg, who took the prize in medicine; Frédéric Mistral, the French poet, and Jose Echegaray, the Spanish author and statesman, divided the prize in literature, while the peace prize this year was given to a society, the Institut de droit international, and not to an individual.

EDUCATION IN CUBA.

Superior instruction.—The following statistics relating to the University of Habana are taken from the official publication of that institution, the Memoria Anuario, and cover the scholastic year 1902–3:

The university, founded in 1728 by the Dominican order, was secularized in 1842, and since that time, but particularly since 1883, its accommodations have been greatly increased and the course of studies has been modified to keep pace with modern ideas. The modern changes in the studies have necessitated the erection of new laboratories and museums. The university preserves the continental division into the "faculties" of letters and sciences, of medicine and pharmacy, and of law (none of theology). There were 503 students matriculated in the three faculties in the year 1902–3, and of these 125 were in the faculty of letters and sciences, 226 in the faculty of medicine and pharmacy, and 149 in the law faculty. Of the 128 matriculates in the faculty of letters and sciences 4 took letters and philosophy, 32 took pedagogics, and 2 sciences, while 70 studied engineering, electricity, and architecture—a fact which shows that the practical studies far outweighed the "disinterested" in the choice of the students.

Secondary instruction.—Secondary instruction as a separate branch of education was officially established in Cuba in 1863 by a royal decree which carried out the Spanish law of

Digitized by Google

public instruction of 1857. In 1863 the governor-general of the island, in compliance with the royal decree, ordered the establishment of 4 institutes of public instruction, 1 each for the provinces of Habana, Santiago de Cuba, Matanzas, and Puerto Principe. The studies at these institutes were classified as general and applied, the former (including languages, history, mathematics, physics, natural history, logic, and philosophy) leading to the degree of bachelor of arts, while the latter prepared for a business career. Graduates from these institutes were entitled to enter the University of Habana.

There were 428 students at the Institute of Habana in the scholastic year 1903–4, and a total of 11,913 have been matriculated in it since its foundation in 1863.

Primary instruction.—The following statistics of primary instruction are taken from La Instrucción Primaria for December 10, 1904, the official journal of the secretary of public instruction. The figures relate to the school year 1903–4:

The total number of teachers employed during the year was 3,661, a decrease of 12 from the preceding year. Of these only 159 were colored, while 3,502 were white. Of the white teachers 1,477 were men and 2,025 women, and of the colored 47 were men and 112 women. The largest number of teachers (1,005) were from 20 to 25 years of age; the next largest number (779) were between 30 and 40; then came, in decreasing order, 661 from 25 to 30 years; 473 from 18 to 20 years; 311 from 40 to 50 years; 272 were 18 years and under, and 160 were 50 years and over.

The total enrollment in 1903–4 was 201,724, a decrease of 17,720 from the previous year. Of this total 131,831 were white and 69,893 colored. As to sex, the white boys numbered 74,842 and the girls 56,989, while the colored boys numbered 37,304 and the girls 32,589, a much smaller difference than in the case of the white. The mean daily attendance was, for white, boys 41,027, girls 32,880; for colored, boys 18,667, girls 17,956, making a total white and colored of 110,531, against 115,039 the previous year, a decrease of 4,508. The appropriation for primary instruction in 1903–04 was ₱2,784,276.72

REGULATIONS FOR GRADUATES OF AMERICAN MEDICAL, DENTAL, AND OTHER COLLEGES IN THE ARGENTINE REPUBLIC.

[The following regulations for graduates of American medical and dental colleges wishing to practice their profession in the Argentine Republic, have been forwarded through the State Department from the American Legation at Buenos Aires for the information of the institutions and students interested therein.]

Graduates of American medical and dental colleges, with the appropriate degrees, who wish to enter the Argentine medical or dental faculty, in order to practice their profession in this country, must present the following documents:

The diploma of the college in which the student graduated. The signatures of the rector and secretary on the diploma must be authenticated by the Secretary of State, ratified by an Argentine consular officer there resident, and his signature in turn certified by the Argentine minister for foreign affairs. As a matter of convenience, the signatures on the diploma might be authenticated by a local State officer before being sent to the Secretary of State at Washington.

The diploma is then to be presented at the office of the secretary of the faculty, accompanied by a translation of the same into Spanish, made by a public translator, on stamped paper. The public translator must also call at the office of the secretary and sign a document acknowledging and confirming the genuineness of his signature.

When the diploma has been accepted by the faculty, a day will be fixed on which the candidate shall appear at the secretary's office, accompanied by two witnesses, who must not be relatives or minors, and who shall declare in writing that the candidate is the real and lawful owner of the diploma presented.

In addition to this the candidate must present a petition, written on stamped paper of the value of $1, asking to be inscribed in the faculty, and to be allowed to take the examination necessary for the "revalidation" of his diploma.

The examinations made by the faculty are, of course, in the Spanish language, and embrace the same groups of subjects, and are conducted in the same order and form, as prescribed for the alumni of the local school. Provisions are made for reexaminations, in case of failure in the first instance.

The fees for "revalidation" are: Medical diploma, $900 paper money ($382.14 United States money); dental diploma, $350 ($148.61).

REGULATIONS GOVERNING THE PRACTICE OF ENGINEERS, ARCHITECTS, AND AGRICULTURISTS IN THE ARGENTINE REPUBLIC.

A law regulating the professions of engineers, architects, and agriculturists in the Argentine Republic was passed June 16, 1905, and received the President's signature on the 26th of the same month. By the terms of the law it is required that all civil and mechanical engineers, architects, chemists, agronomists, and surveyors, with the exception of those already established and of special foreign experts, to whom for lack of corresponding native talent the executive may be compelled to intrust special tasks, must, in order to practice their professions in this country, have received diplomas from the universities and special schools of the nation, or, if holding titles from foreign institutions, must "revalidate" their titles in accordance with the regulations here in force.

As interpreted by the American minister resident at Buenos Aires, the general intention of the law is "to provide for the uniform qualification of those who practice the professions in question, as has long since been done in the case of physicians, dentists, etc. As in these last-mentioned cases, for the purpose of 'revalidation' the applicant will doubtless be required to pass here examinations in the whole matter of his profession, that will necessitate the reviewing, if not the repetition, of his studies."

CHAPTER XXXVIII.

FOREIGN UNIVERSITIES AND OTHER FOREIGN INSTITUTIONS OF HIGHER EDUCATION IN 1904.

I. Arranged by Countries.
II. Arranged by Dates of Founding.
III. Arranged by Number of Students.
IV. Arranged Alphabetically.

INTRODUCTION.

The author of "Minerva, Jahrbuch der Universitäten der Welt" (K. Trübner), which is the chief source of the information offered in the following lists, says that he has submitted his work at various stages of completion to different professors of the countries concerned, so that he is assured that his decision as to which of the learned institutions of the world should be regarded as universities is upheld by the most trustworthy authority. He describes his Jahrbuch as a collection of names of teaching bodies, of universities, or similar institutions of the world.

Since this volume of the Report of the Commissioner of Education contains detailed information concerning the higher institutions of learning in the United States, they have been omitted from the following lists, which are devoted exclusively to foreign institutions.

I. ARRANGED BY COUNTRIES.

ARGENTINA.

Buenos Ayres.—Universidad Nacional. Rector: Leop. Basavilbaso. Faculties: Law, medicine, pharmacy, mathematics and natural sciences, philosophy; 202 professors and 2,650 students. Library of 137,000 volumes.

Cordoba.—Universidad Nacional (1613). Rector: (?) Faculties: Social science, medicine, exact science, natural science; 94 professors and about 1,000 students. Library, museum, and observatory.

AUSTRALIA.

Adelaide.—University of Adelaide (1872). Chancellor: Sir Samuel J. Way; 39 professors and 598 students. Library.

Hobart.—University of Tasmania (1890). Chancellor: Rev. George Clarke; 11 professors and 212 students.

Melbourne.—University of Melbourne (1853). Chancellor: Sir John Madden; 41 professors and 628 students. Library of 35,000 volumes.

New Zealand.—University of New Zealand (1870). Chancellor: Sir Robert Stout. The university consists of University College at Auckland, Canterbury College, Uni-

Digitized by Google

versity of Otago, and Victoria University College; 60 professors and 1,512 students. Several libraries and museums.

Sydney.—University of Sydney (1850). Chancellor: Sir Henry N. McLaurin; 96 professors and 790 students. Library and several museums.

AUSTRIA.

[See also HUNGARY with CROATIA below.]

(a) *Universities.*

Czernowitz, Bukowina.—K. K. Franz-Josefs-Universität (1875). Rector: Dr. Theodor Tarnawski. Faculties: Greek-Oriental theology, law, and philosophy; 53 professors and 657 students. Library of 157,827 volumes.

Gratz, Styria.—K. K. Karl-Franzens-University (1586). Rector: Doctor von Luschin. Faculties: Theology, law, medicine, philosophy; also 44 institutions such as clinics, seminaries, laboratories, and museums; 154 professors and 1,751 students. Library of 204,560 volumes.

Innspruck, Tyrol.—K. K. Leopold-Franzens-Universität (1673). Rector: Karl Heider. Faculties: Theology, law, medicine, philosophy; also 45 institutions such as clinics, seminaries, laboratories and museums. Since 1904 it has a separate law faculty for Italian students, with 6 professors; 99 professors and 1,111 students. Library of 188,560 volumes.

Krakow, Galicia.—Uniwersytet Jagielloński w Krakowie (1364). Rector: Napoleon Cybulski. Faculties: Theology, law, medicine, philosophy; also 47 institutions such as clinics, seminaries, laboratories, and collections; 146 professors and 1,879 students. Library of 365,432 volumes.

Lemberg, Galicia.—C. K. Uniwersytet Imienia Cesarza Franciska I (1784). Rector: Professor Kalina. Faculties: Theology, law, medicine, philosophy; also 31 institutions such as clinics, seminaries, laboratories, and collections; 128 professors and 2,747 students. Library of 176,924 volumes.

Prague, Bohemia.—K. K. Deutsche Karl-Ferdinand-Universität (1348). Rector: Prof. Josef Ulbrich. Faculties: Theology, law, medicine, philosophy; also 50 institutions such as clinics, seminaries, laboratories, and collections; 138 professors and 1,299 students. Library of 306,910 volumes.

Prague, Bohemia.—C. K. Česká Universita Karlo-Ferdinandova (1882). Rector: Prof. Franz Storch. Faculties: Theology, law, medicine, philosophy; also 50 institutions such as clinics, seminaries, laboratories, and collections; 160 professors and 3,487 students. Library of preceding institution used.

Vienna, Nether-Austria.—K. K. Universität (1365). Rector: Franz M. Schindler. Faculties: Theology, law, medicine, philosophy; also 65 institutions such as clinics, seminaries, laboratories, and collections; 440 professors and 6,205 students. Library of 637,540 volumes.

(b) *Polytechnica.*

Brünn, Moravia.—K. K. Deutsche Technische Hochschule (1850). Rector: Max Hönig. Departments: Civil and mechanical engineering, electro and chemical technology; also several laboratories, collections, and shops; 70 professors and assistants and 589 students. Library of 37,000 volumes.

Brünn, Moravia.—K. K. Böhmische Technische Hochschule (1899). Rector: Jos. Bertl. Departments: Same as the preceding institution; 53 professors and assistants and 341 students. Library of 6,005 volumes.

Gratz, Styria.—K. K. Technische Hochschule (1811). Rector: Dr. Rudolf Schüssler. Departments: Same as in Brünn; 41 professors and assistants and 410 students. Library.

Digitized by Google

Lemberg, Galicia.—K. K. Technische Hochschule (1844). Rector: Kazimierz Rosinkiewicz. Departments: Same as in Brünn; 44 professors and 1,026 students. Library.

Prague, Bohemia.—K. K. Deutsche Technische Hochschule (1806). Rector: Josef Melan. Departments: Same as in Brünn; 69 professors and assistants and 778 students. Library.

Prague, Bohemia.—K. K. Böhmische Technische Hochschule (1868). Rector: Kristian Petrlik. Departments: Same as in Brünn; 90 professors and assistants and 1,626 students. Library in common with preceding institutions.

Vienna, Nether-Austria.—K. K. Technische Hochschule (1815.) Rector: Professor von Tetmajer. Departments: Same as in Brünn; 113 professors and 2,479 students. Library of 103,372 volumes.

(c) *Other higher seats of learning.*

Dublany, Galicia.—Landwirthschaftliche Akademie (1855). Director: Julisz Frommel. Departments: Agriculture, meteorology, physics, and chemistry; 21 professors and 81 students. Library of 6,845 volumes.

Lemberg, Galicia.—Thierärztliche Hochschule (1881). Rector: Josef Szpilman; 11 professors and 47 students.

Leoben, Styria.—Montanistische Hochschule (1894). Rector: Anton Bauer; 24 professors and 272 students. Library.

Olmütz, Moravia.—K. K. Theologische Facultät (1574). Eleven professors and 197 students.

Pribram, Bohemia.—Montanistische Hochschule (1849). Rector: Dr. J. Theurer; 20 professors and 140 students.

Salzburg.—K. K. Theologische Facultät (1623). Eight professors and 61 students.

Trieste.—Handels-Hochule (1877). Director: Dr. Georg Piccoli; 10 professors and 26 students.

Vienna.—K. K. Evang.-Theologische Facultät (1821). Rector: ——; 8 professors and 47 students.

Vienna.—K. K. Hochschule für Boden-Kultur (1872). Rector: Dr. Hermann von Schullern zu Schrattenhofen. Departments: Agriculture, natural science, and 28 laboratories and experimental stations; 46 professors and 458 students. Library.

Vienna.—K. K. Lehranstalt für Orientalische Sprachen (1851). Rector: Leopold Pekotsch; 10 professors and 192 students. Library of 1,150 volumes.

Vienna.—K. K. Militär Thierarznei-Institut und Thierärztliche Hochschule (1764). Rector: Dr. Josef Bayer; 20 professors and 285 students.

Vienna.—K. K. Konsular-Akademie (1754). Director: Julius Baron Zwiedinek von Südenhorst; 30 professors and 35 students.

Vienna.—Bildungsanstalt für Weltpriester (1816). Rector: Dr. Laurenz Mayer; 5 professors and and 26 students.

Vienna.—Pazman'sches Kollegium für Priester (1623). Rector: Aug. Fischer-Colbrie; 3 professors and 50 students.

BELGIUM.

(a) *Universities.*

Brussels.—Université Libre de Bruxelles (1834). Rector: Maurice Vauthier. Faculties: Philosophy, law, natural science, medicine, pharmacy, and polytechnic school; 90 professors and 1,069 students. Library.

Ghent.—Université de l'État de Gand (1816). Rector: Prof. P. Thomas. Faculties: Philosophy, law, natural science, medicine, and technology; 88 professors and 870 students. Library of 328,940 volumes.

Digitized by Google

Liege.—Université de Liège (1817). Rector: Dr. O. Merten. Faculties: Philosophy, law, natural science, medicine, and polytechnic school; also 28 clinics, laboratories, and collections; 90 professors and 1,825 students. Library.

Louvain.—Université Catholique (1426, 1835). Rector: A. Hebbelynck. Faculties: Theology, law, medicine, philosophy, natural science; 104 professors and 2,070 students. Library of 4,000 volumes.

(b) *Polytechnica.*

See Universities of Brussels, Ghent, and Liege which have technological departments.

(c) *Other higher seats of learning.*

Brussels.—École des Sciences Politiques et Sociales (1834), now affiliated with the University of Brussels, see above; 12 professors. Library.

Brussels.—École de Commerce (1834), connected with the preceding institution; 11 professors. Library.

Brussels.—Instituts Solvay, consisting of Institut de Physiologie (1894); 5 professors, and Institut de Socialogie (1901); 7 professors.

Gembloux.—Institut Agricole de l'État. Director: M. Hubert; 14 professors and 110 students.

Ghent.—École des Arts et de l'Industrie, now a part of the Université de Gand.

Louvain.—Institut Supérieure de Philosophie École St. Thomas d'Aquin (1900). President: D. Mercier; 18 professors.

Louvain.—École des Sciences Politiques et Sociales. President: P. Poullet. École des Sciences Commerciales et Consulaires. President: V. L. J. L. Brants. These two institutions, formerly independent, are now part of the Université Catholique de Louvain.

Mons.—Ecole des Mines du Hainaut. Director: M. Chevalier; 21 professors and 315 students.

BRAZIL.

(a) *Universities* (none).

(b) *Other higher seats of learning.*

Bello-Horizonte.—Faculdade livre de Direito (1892). Director: Affonso A. M. Penna; 16 professors. Library.

Pernambuco.—Faculdade de Direito (1875). Director: Dr. J. Tavares de Mello Baretto; 24 professors and 250 students. Library of 9,500 volumes.

Ouro Preto.—Escola de Minas (1875). Director: J. C. da Costa-Sena.

São Paulo.—Escola Polytechnica de São Paulo (1894). Director: Dr. A. F. de Paula Souza; 38 professors and 152 students. Library.

BULGARIA.

Sophia.—Visse Uciliste v Sofiya (University) (1888). Rector: Bonco Boëv. Faculties: History and philology, natural science, law; 40 professors and 794 students. Library of 46,439 volumes.

CANADA.

(a) *Universities.*

Halifax.—Dalhousie College and University (1818). President: Rev. J. Forrest; 13 professors, 21 examiners, and 24 lecturers, 350 students. Two libraries of 15,000 and 7,300 volumes, respectively.

Kingston.—Queen's University (1840). Chancellor: Sir Sandford Fleming. Faculties: Theology, arts, technology, medicine, law, 60 professors and 923 students. Library and observatory.

Digitized by Google

Montreal.—McGill College and University (1821). Principal: William Peterson; 118 professors, 40 demonstrators, and 18 assistants; 1,160 students. University library of 104,000 volumes and McGill medical library of 25,000 volumes.

Montreal.—Université Laval (1852). Rector: Gaspar Dauth. Faculties: Theology, law, medicine, arts, technology, and veterinary science; 61 professors and many assistants; 800 students. Library of 49,250 volumes.

Quebec.—Université Laval (1852). Rector: O. E. Mathieu. Faculties: Theology, law, medicine, arts; 56 professors and 360 students. Library of 120,000 volumes and three museums.

Toronto.—University of Toronto (1827). President: James Loudon. Faculties: Philosophy, medicine, applied science, and university college; 70 professors, 20 lecturers, a number of demonstrators and assistants; 1,625 students. Library of 54,000 volumes and a biological museum.

Toronto.—Victoria University (1830). President: Rev. N. Burwash. Faculties: Arts and theology; 23 professors and 250 students. Library of 16,502 volumes and a museum.

(a) *Polytechnica.*

Montreal.—École Polytechnique, part of Université Laval; see above.

Toronto.—Faculty of Applied Science, part of the University of Toronto; 11 professors, 5 demonstrators, and 11 fellows.

(c) *Other higher seats of learning.*

Kingston.—School of Mining (1892), affiliated with Queen's University. Director: William L. Gordon; 5 professors, 7 lectors, 4 demonstrators, and 325 students. Museum and library.

Montreal.—School of Veterinary Science and a Polytechnic School, both affiliated with Université Laval; see above.

Toronto.—St. Michael's College (1852), Wycliffe College (1877), Knox College (1844). Theological seminaries.

Toronto.—Trinity Medical College (1850), Ontario Medical College for Women (1883), Royal College of Dental Surgeons (1868). Dean: J. Branston Willmott; 15 professors; Ontario College of Pharmacy (1882); 6 professors and 140 students. These four colleges are now affiliated with the University of Toronto.

Toronto.—Ontario Agricultural College. President: G. C. Creelman; 12 professors and 15 assistants. Now affiliated with the University of Toronto.

CAPE COLONY.

Capetown.—University of the Cape of Good Hope (1873). Vice-chancellor: Sir John Buchanon. This institution is merely an examining board like those in India.

Capetown.—South African College (1829); 17 professors and 7 assistants.

CHILE.

Santiago.—Universidad de Chile (1743). Rector: Don Osvaldo Rengifo. Faculties: Theology, law, mathematics and natural sciences, philosophy and arts, medicine and pharmacy; 96 professors, many assistants, and 1,000 students. Library.

Santiago.—Instituto Pedagógico de Chile (1889). Director: D. Asnunátegui Solar; 10 professors and 150 students. National library.

CHINA.

Pekin.—College of Foreign Knowledge. Particulars wanting.

CUBA.

Habana.—Universidad de la Habana (1728). Rector: Dr. Leopold V. Berriel y Fernandez. Faculties: Philosophy and natural science, medicine and pharmacy, law; 44 professors, 13 assistants, and 503 students; also 24 institutions such as clinics, laboratories, collections, and shops. Library of 12,900 volumes.

DENMARK.

Copenhagen.—Kjobenhavns Universitet (1479). Rector: Prof. P. Madsen. Faculties: Theology, law, medicine, philosophy, mathematics, and natural science; also 13 institutions, such as laboratories and collections; 94 professors and about 2,000 students. Library of 406,500 volumes.

Copenhagen.—Polytechnic Hoiskole (1829). Director: G. A. Hagemann; 29 professors and 550 students. Affiliated with the University.

Copenhagen.—Veterinair- og Landbo- Hoiskole (1858). Director: F. Friis; 28 professors, 10 assistants, and 370 students. Library of 32,000 volumes.

Copenhagen.—Tandlaegeskolen (Dental College) (1888); 3 professors.
Pharmacy College (1892); 6 professors and 65 students.

Reykjavik on Iceland.—Prestaskóli (Theological College) (1847).
Laeknaskóli (Medical College) (1876).

ECUADOR.

Quito.—Academia Ecuatoriana. Director: Carlos R. Tobar.

EGYPT.

Cairo.—Azhar School (988). Rector: Ali Muhammed il Riblani; 326 professors and 10,182 students.
Ecole de Droit (1868). Director: J. Grandmoulin.
Kasr il Aini (School of Medicine) (1837). Director: Dr. Keatinge.
Institut Français d'Archéologie Orientale (1881). Director: M. Chassinat.

ENGLAND AND WALES.

(See also SCOTLAND and IRELAND below.)

(a) *Universities.*

Birmingham.—University of Birmingham (1875). Vice-chancellor: C. C. Beele. Faculties: Science, arts, medicine, commerce; 75 professors, 16 assistants, and 1,000 students. Library.

Cambridge.—University of Cambridge (1257). Vice-chancellor: E. A. Beck. Faculties: Theology, law, medicine, natural science, biology and geology, oriental, modern, and classical philology, history and archeology, agriculture, moral science, music; 18 colleges, with lecture courses; 13 institutions, such as museums, observatory, and societies for research and study; also two women's colleges, Girton and Newnham; 121 professors, 30 assistants, and 2,900 students. Library of over 500,000 volumes.

Durham.—Durham University (1833). Warden: Rev. G. W. Kitchin; 21 professors and 186 students. See also Newcastle.

Leeds.—University of Leeds (1887). Since 1904 an independent institution. Prochancellor: A. G. Lupton; 50 professors, 49 assistants, and 1,191 students. Library and museum.

Liverpool.—University of Liverpool (1881). Vice-chancellor: A. W. W. Dale. Faculties and schools: Arts, science, engineering, law, medicine, dentistry, hygiene; 103 professors, numerous assistants and fellows, and 750 students. Library.

Digitized by Google

London.—University of London (1836), formerly an examining institution, since 1900 a teaching institution; (a) the university proper. Vice-chancellor: Ph. H. Pye-Smith. Faculties: Theology, arts, laws, music, medicine, science, engineering, economics, and the university senate; 92 professors and 782 "recognized teachers;" 60 examinations are held every year. (b) The following colleges are now parts of the university:

University College (1828). President: Lord Reay. Faculties: Arts and laws, science, medicine, and oriental languages; 99 professors, many assistants, and 1,246 students. Library of 100,000 volumes.

King's College (1830). Director: Rev. A. C. Hedlam. Faculties: Theology, philosophy, medicine, and school of modern oriental languages; 116 professors, many assistants, and 1,300 students.

Hackney College (1803). Principal: Rev. P. T. Forsyth. A divinity school only; 6 professors, 5 assistants, and 24 students.

New College (1850). Principal: Rev. R. V. Pryce. Faculty of arts and theology; 5 professors.

Baptist College (1810). Principal: Rev. G. P. Gould; 4 professors, 5 assistants, and 40 students.

Cheshunt College (1768). Principal: Rev. O. C. Whitehouse; 4 professors and 25 students.

Wesleyan College. Principal: Rev. G. Fletcher; 7 professors.

London College of Divinity. Principal: Rev. A. W. Greenup; 7 professors.

Royal Halloway College for Women (1886). Principal: Miss E. Penrose. Faculties of arts and science; 14 professors and many assistants; 140 students. Library of 8,000 volumes.

Bedford College for Women (1849). Principal: Miss E. Hurlbatt; 17 professors and 8 assistants; 300 students. Library.

Westfield College for Women (1882). Mistress: Miss C. L. Maynard; 14 professors; laboratories. Library.

Manchester.—Victoria University of Manchester (1851). Vice-Chancellor: A. Hopkinson; 134 professors and 1,146 students. Museum and library of 86,362 volumes.

Oxford.—University of Oxford (1200). Chancellor: George Viscount Goschen. Faculties: Theology, law, medicine, natural science, arts, philology, and history; 27 colleges and halls with lecture courses; many institutions, such as libraries, infirmaries, collections, etc.; 253 professors and many assistants; 3,570 students. Bodleian library of 600,000 volumes and several college libraries.

Wales.—University of Wales (1893) created through a combination of the three university colleges of Aberystwyth, Bangor, and Cardiff. Vice-Chancellor: E. H. Griffiths; 28 examiners. Colleges, to wit:

University College of Wales in Aberystwyth (1872). Principal: T. F. Roberts; 38 professors and 453 students. Library.

University College of North Wales in Bangor (1884). Principal: Henry R. Reichel; 32 professors and 325 students. Library of 25,000 volumes.

University College of South Wales in Cardiff (1883). Principal: E. H. Griffiths. Faculties: Philosophy, science, normal department; 62 professors and 606 students. Library of 8,000 volumes.

(b) *Colleges.*

Bristol.—University College (1876). President: Lord Bishop of Hereford. Faculties: Arts and science, medicine; 55 professors and 1,121 students. Library.

Lampeter, Wales.—St. David's College (1828). Principal: J. M. Bebb; 15 professors and 132 students.

London.—St. Bartholomew's Hospital and College (1123). Dean: H. J. Waring; 50 professors and 950 students. Museum and library.

Digitized by Google

London.—The London Hospital Medical College (1740). Warden: Munro Scott; 58 professors and 1,000 students. Library.

London.—Guy's Hospital Medical School (1772). Dean: Dr. H. L. Eason; 47 professors and about 500 students. Connected with this is—

Guy's Hospital Dental School (1891). Dean: Dr. H. L. Eason; 9 professors. Library.

London.—St. Thomas's Hospital Medical School (1207). Secretary: George Rendle; 24 professors and 25 teachers. Museum and library.

London.—St. George's Hospital Medical School (1752) Dean: Doctor Latham; 39 professors and 12 teachers; 350 students.

London.—St. Mary's Hospital Medical School (1850). Dean: H. A. Caley; 25 professors. Museum and library.

London.—Middlesex Hospital Medical School (1754). Dean: John Murray; 23 professors and 150 students.

London.—Charing Cross Hospital Medical School (1876). Dean: H. F. Waterhouse; 37 professors and many assistants. Library of 4,000 volumes.

London.—Westminster Hospital Medical School (1715). Dean: A. M. Gossage; 28 professors.

London.—Royal Free Hospital School of Medicine for Women. President: Mrs. Garrett Anderson; 28 professors and 218 students.

(c) *Other higher seats of learning.*

Bristol.—Merchant Venturer's Technical College (1856). Principal: Julius Wertheimer; 4 professors, 42 lecturers, 25 demonstrators, 242 students. Library.

Cirencester.—Royal Agricultural College (1845). Principal: John B. MacClellan; 7 professors and 85 students. Museum and library.

Coopers Hill.—Royal Indian Engineering College (1885). President: Colonel Ottley; departments of engineering and forestry; 17 professors and 130 students.

Liverpool.—School of Tropical Medicine (1899). President: Sir Alfred Jones; 14 professors.

London.—City and Guilds of London Institute (1878), consisting of (a) City and Guilds' Central Technical College (1884). Dean: W. E. Ayrton; 409 students. (b) City and Guilds' Technical College (1883). Principal: S. P. Thompson; 554 students.

London.—School of Economics and Political Science (1895). Director: H. J. MacKinder; 27 professors. Library of 15,000 volumes.

London.—Gresham College (1569). Secretary: Sir John Watney; 8 professors.

London.—Inns of Court (Law Schools): Lincoln's Inn, Middle Temple, Inner Temple, Gray's Inn. Each is organized for study. Libraries of 54,000, 40,000, 60,000, and 18,000 volumes. The teaching body of the four inns consists of 14 professors and 4 assistants.

London.—Royal College of Physicians (1518). President: Sir W. Selby Church; 10 professors. Library.

London.—Royal College of Surgeons of England (1800). President: John Tweedy; 7 professors. Museum and library.

London.—Jews' College (Theological School) (1845). President: Rev. H. Adler; 5 professors.

London.—Royal Ophthalmic Hospital College (1804). Secretary: R. J. Bland; 13 professors and 30 students.

London.—National College of Hospital for the Paralyzed and Epileptic (1859). Secretary: G. H. Hamilton; 20 professors.

London.—The London Skin Hospital (1887). Secretary: H. M. Duncan; 11 professors.

Digitized by Google

London.—Lister Institute of Preventive Medicine (1891). President: Lord Lister; 10 professors.

London.—School of Tropical Medicine (1900). Director: G. C. Low; 12 professors and 120 students.

London.—Royal Veterinary College (1791). Principal: J. McFadeyan; 10 professors and 230 students.

London.—Royal College of Science (with mining department) (1851); 13 professors and 33 assistants. Library.

London.—Royal College of Art (1851); 11 professors and 5 assistants.

London.—School of Modern Oriental Languages. The first division of this now belongs to University College, the second to King's College, see above.

Newcastle.—Durham College of Medicine (1851). Part of Durham University, see above; 21 professors and 200 students. Museum and two libraries.

Newcastle.—Durham College of Science (1871). Part of Durham University, see above; 47 professors. Library of 50,000 volumes.

Nottingham.—University College (1880). Director: J. E. Symes. Departments: Literature and law, chemistry and metallurgy, natural science and engineering; 40 professors, many assistants, and 1,900 students. Also a commercial department. Library.

Sheffield.—University College (1879). Director: W. M. Hicks. Faculties: Arts, pure and applied science, medicine and technology; 81 professors and 400 students. Library of 133,840 volumes.

FRANCE.

(a) *State universities.*

Aix-en-Provence.—Université d'Aix-Marseille (1409). Rector: M. Belin. Faculties: Law and philosophy; 40 professors and 1,052 students. Library of about 76,000 volumes. Two faculties, those of science and medicine, are located at Marseille.

Besançon.—Université de Besançon (1422 and 1691). Rector: M. Laronze. Faculties: Natural science, philosophy, medicine, and pharmacy; 54 professors and 338 students. Library of 25,000 volumes.

Bordeaux.—Université de Bordeaux (1441). Rector: G. Bizos. Faculties: Law, medicine and pharmacy, natural science and philosophy; 135 professors and 2,320 students. Three libraries with a total of 98,000 volumes. See also Annex under (e).

Caen.—Université de Caen (1437). Rector: M. Zevort. Faculties: Law, natural science, philosophy, medicine and pharmacy; 63 professors and 783 students. Library of 108,214 volumes.

Clermont-Ferrand.—Université de Clermont (1808). Rector: M. Zeller. Faculties: Natural science, philosophy, medicine and pharmacy; 50 professors and 274 students. Library of 90,000 volumes.

Dijon.—Université de Dijon (1722). Rector: M. Boirac. Faculties: Law, natural science, philosophy, medicine and pharmacy; 57 professors and 880 students. Library of 54,000 volumes.

Grenoble.—Université de Grenoble (1339). Rector: M. Joubin. Faculties: Law, natural science, philosophy, medicine and pharmacy; 65 professors and 878 students (exclusive of 352 students of summer school). Library of 100,000 volumes.

Lille.—Université de Lille (1808). Rector: G. Lyon. Faculties: Law, medicine, natural science, philosophy; 102 professors and 1,164 students. Library of 194,094 volumes. The medical faculty is at Amiens.

Lyon.—Université de Lyon (1808). Rector: M. Compayré. Faculties: Law, medicine, natural science, and philosophy; 189 professors and 2,609 students. Library of 187,400 volumes.

Digitized by Google

Marseille.—Université d'Aix Marseille (see also Aix-en-Provence). Faculties: Natural science, medicine and pharmacy; 88 professors and 200 students. Library of 16,000 volumes.

Montpellier.—Université de Montpellier (1181, 1289). Rector: A. Benoist. Faculties: Law, medicine, natural science, philosophy, and pharmacy; 110 professors and 1,600 students. Library of 191,787 volumes.

Nancy.—Université de Nancy (1572). Rector: M. Adams. Faculties: Law, medicine, natural science, philosophy, and pharmacy; 127 professors and assistants and 1,300 students. Library of 141,270 volumes. Connected with the university are (a) Institut Chemique, 110 students; (b) Institut Sérotherapique; (c) Institut Électrotechnique, 131 students; Institut Colonial, 39 students.

Paris.—Université de Paris (1200). President of Council: L. Liard. Faculties: Protestant theology, law, medicine, natural science, philosophy, and pharmacy; 433 professors and 12,985 students. Library, including that of the Sorbonne, of 558,900 volumes. The library is divided into 5 faculty libraries.

Poitiers.—Université de Poitiers (1431). Rector: M. Cons. Faculties: Law, natural science, philosophy, medicine and pharmacy; 59 professors and 878 students. Library of 46,286 volumes. Another medical school of this university is in Limoges, see below.

Rennes.—Université de Rennes (1808). Rector: M. Laronze. Faculties: Law, natural science, philosophy, medicine and pharmacy; 88 professors and 1,143 students. Library of 134,570 volumes. To this belongs the medical school at Angers, see below.

Toulouse.—Université de Toulouse (1233). Rector: M. Perroud. Faculties: Law, medicine and pharmacy, natural science, philosophy; 110 professors and 1,950 students. Library of 117,350, of which 25,100 are in Montauban, see below. To this belongs the Faculté de Théologie Protestante at Montauban.

(b) *Catholic free universities.*

Angers.—Université Catholique de l'Ouest (1875). Rector: M. Pasquier. Faculties: Theology, law, natural science, philosophy; 40 professors and 222 students. Library of 30,000 volumes.

Lille.—Facultés Catholiques (1875). Chancellor: M. Hautcoeur. Faculties: Theology, law, medicine and pharmacy, science, philosophy and letters; professors and 550 students.

Lyon.—Facultés Catholiques (1875). Rector: M. Dadolle. Faculties: Theology, law, natural science, philosophy; 48 professors and 600 students.

Paris.—Institut Catholique (1875). Rector: M. Péchenard. Faculties: Theology, law, canonic law, philosophy, letters and science; 59 professors and 704 students. Library of 150,000 volumes.

Toulouse.—Institut Catholique (1875). Rector: M. Batiffol. Faculties: Theology and philosophy; 20 professors and 100 students. Library.

(c) *Colleges.*

Paris.—Collège de France (1518, 1545). Administrator: M. Levasseur; 63 professors; 3 laboratories.

Paris.—École Pratique des Hautes Études à la Sorbonne (1868), consisting of 5 seminaries for science and mathematics, history and philology; 122 professors; many laboratories and collections. Library, see Université above.

Paris.—École Normale Supérieure (1795). Director: George Perrot. Sections: Letters and science; 36 professors and 103 students. Library of 60,000 volumes.

Digitized by Google

(d) *Polytechnica.*

Grenoble.—Institut Électrotechnique (1899). Director: M. Pionchon; 6 professors and 25 students (also 145 hearers).

Lyon.—(*a*) École de Chimie Industrielle (1883). Director: M. Vignon. (*b*) École Française de Tannerie (1899). Director: M. Vignon. (*c*) École Agronomique du Rhone (1880). Director: M. Vignon. These three institutions are affiliated with Université de Lyon.

Marseille.—École d'Ingénieurs de Marseille (1891). Professors same as in the faculty of science of the Universite de Marseille; 48 students.

Nancy.—Two institutions affiliated with the Universite de Nancy. See above (*a*) and (*c*).

Paris.—École Polytechnique (1794). Commandant: General Corbin; 63 professors and 370 students. Library.

Paris.—Ecole Nationale de Ponts et Chaussées (1747). Director: M. Guinard; 34 professors and 122 students. Library.

Paris.—École Municipale de Physique et de Chimie Industrielles (1882). President: M. Lampué; 13 professors and 100 students. Library of 2,000 volumes.

Paris.—École Supérieure d'Électricité (1894). President: E. Mascart; 15 professors and 70 students. Library of 2,000 volumes.

Paris.—École Spéciale d'Architecture (1865). Director: Emile Trélat; 26 professors and 69 students.

(e) *Other higher seats of learning.*

Alfort.—Ecole Vétérinaire (1765). Director: M. Barrier; 20 professors and 312 students. Library of 16,000 volumes.

Algiers.—Académie d'Alger (1849). Rector: M. Jeaumaire. Schools: Law, medicine and pharmacy, science, letters, modern Oriental languages; 61 professors and 800 students. Library of 52,600 volumes.

Amiens.—École de Médecine et de Pharmacie, part of the Université de Lille. Director: A. Moulonguet; 19 professors and 100 students.

Angers.—École de Médecine et de Pharmacie, part of the Université de Rennes. Director: M. Meslin; 25 professors and 150 students.

Beauvais.—Institut Agricole (1854). Director: Frère Paulin; professors, the Christian Brothers; 104 students. Library of 14,000 volumes.

Bordeaux.—École de Chimie Appliqué à l'Industrie et à l'Agriculture (1891); 6 professors and 51 students.

Bordeaux.—École du Service de Santé de la Marine (affiliated with Université de Bordeaux; 8 professors.

Douai.—École Nationale des Industries Agricoles (1893); 9 professors and 30 students. Library.

Grignon.—École Nationale d'Agriculture (1828). Director: M. Trouard-Riolle; 22 professors and 120 students. Library of 8,000 volumes.

Lille.—École des Hautes Études Industrielles (1885). Director: Colonel Arnould; 21 professors and 100 students. Library.

Lille.—Institut Pasteur de Lille (1895). Director: M. Calmette; 7 professors and 5 laboratories.

Limoges.—École de Médecine et de Pharmacie (part of Université de Poitiers); 17 professors and 115 students.

Lyon.—École Centrale Lyonnaise (1857). President: M. Ancel; 32 professors and 130 students. Library of 2,000 volumes. A technical school of high repute.

Lyon.—École Vétérinaire de Lyon (1761). Director: M. Arloing; 20 professors and 180 students. Library of 11,000 volumes.

Montauban.—Faculté de Théologie Protestante (part of Université de Toulouse; 12 professors and 66 students. Library.

Digitized by Google

Montpellier.—École Nationale d'Agriculture (1872). Director: M. Ferrouillat; 14 professors and 200 students. Library of 14,000 volumes.

Nancy.—École Nationale des Eaux et Forêts (1824). Director: M. Guyot; 12 professors and 51 students. Library of 7,382 volumes.

Nantes.—École de Plein Exercice de Médecine et de Pharmacie (1808). Director: A. Malherbe; 28 professors and 280 students.

Nantes.—École Libre de Droit et de Notariat de Nantes. Director: G. Maublanc; 16 professors and 100 students.

Paris.—École Spéciale de Langues Orientales Vivantes (1795). Administrator: Barbier de Meynard; 25 professors and 470 students. Library of 42,030 volumes and MSS.

Paris.—École Nationale des Chartes (School of Archives) (1821). Director: Paul Meyer; 9 professors and 20 students. Library of 16,000 volumes.

Paris.—École Nationale et Spéciale des Beaux-Arts (School of Fine Arts). Director: Paul Dubois; 51 professors and about 2,000 students.

Paris.—Séminaire Israélite de France (1829). Director: Joseph Lehmann; 21 professors and 38 students. Library of 6,000 volumes.

Paris.—École Libre de Sciences Politiques. Director: Emile Boutmy; 58 professors and 560 students. Library.

Paris.—École des Hautes Études Sociales. President: Alfred Croiset. Professors from other institutions of Paris.

Paris.—Collége Libre des Sciences Sociales (1895). Director: E. Delbet; 380 students, professors from other institutions of Paris.

Paris.—École Russe des Hautes Études Sociales (1901). President: E. Metchinkoff; 41 professors and 360 students.

Paris.—École Nationale Supérieure des Mines (1778). Director: Ad. Carnot; 33 professors and 155 students.

Paris.—Institut National Agronomique. Director: Dr. Regnard; 36 professors and 240 students.

Paris.—École Centrale des Arts et Manufactures (1829). Director: M. Buquet; 56 professors and 700 students.

Paris.—École d'Anthropologie (1889). Director: H. Thulié; 9 professors.

Paris.—Musée d'Histoire Naturelle (1626). Director: E. Perrier; 43 professors. Library of over 200,000 volumes, and more than 24,000 drawings and charts.

Paris.—École de Louvre. Director: M. Homolle. (Art School) 10 professors.

Rheims.—École de Médecine et de Pharmacie (1550), part of the Université de Paris; 23 professors and 90 students. Library of 9,000 volumes.

Rennes.—École Nationale d'Agriculture. Director: M. Séguin; 17 professors and 620 students. Library of 8,576 volumes.

Rouen.—Ecole de Médecine et de Pharmacie, part of Université de Caen; 21 professors and 152 students.

St. Etienne.—École des Mines (1816). Director: M. Tauzin; 8 professors and 120 students. Library of 12,000 volumes.

Toulouse.—École Nationale Vétérinaire (1825). Director: M. Laulanié; 11 professors and 177 students. Library of 9,000 volumes.

Tours.—École de Medicine et de Pharmacie, part of the Université de Poitiers; 20 professors and 100 students.

(b) *Polytechnicum and Art Academy.*

Karlsruhe.—Technische Hochschule (1825). Rector: L. Klein; 78 professors and 1,607 students. Library.

Karlsruhe.—Kunst Akademie (1853). Director: Ferd. Keller; 17 professors.

BAVARIA (KINGDOM).

(a) *Universities.*

Erlangen.—Friedrich-Alexanders Universität (1743). Rector: Doctor Gerlach. Faculties: Theology, law, medicine, philosophy; also 44 institutions such as clinics, seminaries, laboratories, and collections; 69 professors and 982 students. Library of 223,000 volumes.

Munich.—Ludwig-Maximilians Universität (1472). Rector: Dr. F. Lindemann. Faculties: Theology, law, medicine, philosophy in two sections; also 34 institutions such as clinics, seminaries, laboratories, and collections, to which may be added the large royal collections in Munich; 230 professors and 4,855 students. Library of over 500,000 volumes.

Würzburg.—Julius-Maximilians Universität (1402). Rector: Sebastian Merkle. Faculties: Theology, law, medicine, and philosophy; also 40 institutions, such as clinics, seminaries, laboratories, and collections; 94 professors and 1,379 students. Library of 350,000 volumes.

(b) *Polytechnicum.*

Munich.—Technische Hochschule (1868). Rector: Dr. W. van Dyke. Departments: General, civil engineering, architecture, mechanical engineering, chemical, and agricultural; 66 professors, 72 assistants, and 2,381 students. Library.

(c) *Theological colleges.*

Augsburg.—Theologisches Lyceum. Rector: P. O. Först; 5 professors.

Bamberg.—Theologisches Lyceum (1647). Rector: P. Hartung; 10 professors and 71 students. Library of 9,000 volumes.

Dillingen.—Theologisches Lyceum (1549). Rector: P. David Leistle; 12 professors and 131 students.

Eichstätt.—Bischöfliches Lyceum (1843). Rector: Karl Kiefer. Faculties: Theology and philosophy; 13 professors and 104 students. Libraries of together 49,000 volumes.

Freising.—Theologisches Lyceum (1834). Rector: Balthasar von Daller. Faculties: Theology and philosophy; 12 professors and 150 students. Library of 17,000 volumes.

Digitized by Google

Passau.—Theologisches Lyceum (1834). Rector: J. E. Diendorfer. Faculties: Theology and philosophy; also 4 laboratories and collections; 10 professors and 105 students.

Regensburg.—Theologisches Lyceum (1736). Rector: Doctor Schenz; 11 professors and 201 students. Library of 4,600 volumes.

(d) *Other higher seats of learning.*

Aschaffenburg.—Forstliche Hochschule (1844). Rector: Doctor Hermann; 8 professors and 68 students. Library.

Munich.—Thierärztliche Hochschule (1790). Director: Dr. M. Albrecht; 13 professors, 10 assistants, and 319 students. Library of 13,000 volumes.

Munich.—Akademie der bildenden Künste (1770). Director: Ferd. von Miller.

PRUSSIA (KINGDOM).

(a) *Universities.*

Berlin.—Friedrich-Wilhelms Universität (1809). Rector: Oskar Hertwig. Faculties: Theology, law, medicine, and philosophy; also 70 institutions, such as clinics, seminaries, laboratories, and collections; 491 professors and 7,154 matriculated and 6,628 other students, total 13,782. Library of 384,843 volumes. To this belongs a school for oriental languages; 23 professors and 460 students.

Bonn.—Friedrich-Wilhelms Universität (1818). Rector: Professor Schrörs. Faculties: Theology in two sections, law, medicine, and philosophy; also 41 institutions, such as clinics, seminaries, laboratories, and collections; 180 professors and 2,970 students. Library of 301,500 volumes.

Breslau.—Universität (1506). Rector: Dr. G. Kawerau. Faculties: Same as in Bonn; also 42 institutions, such as in Bonn; 183 professors and 1,780 students. Library of 312,000 volumes.

Göttingen.—Georg-Augusts Universität (1737). Pro-Rector: Prof. Victor Ehrenberg. Faculties: Same as in Berlin; also 51 institutions like those in Berlin; 148 professors and 1,694 students. Library of 518,039 volumes.

Greifswald.—Universität (1456). Rector: Franz Schütt. Faculties: Same as in Berlin; also 31 institutions like those in Berlin; 93 professors and 817 students. Library of 176,800 volumes.

Halle.—Friedrichs Universität Halle-Wittenberg (1502, 1694). Rector: Professor Lindner. Faculties: Same as in Berlin; also 37 institutions like those in Berlin; 170 professors and 1,983 students. Library of 216,000 volumes.

Kiel.—Christian-Albrechts Universität (1665). Rector: Friedrich Kauffmann. Faculties: Same as in Berlin; also 36 institutions like those in Berlin; 132 professors and 1,033 students. Library of 251,901 volumes.

Konigsberg.—Albertus Universität (1544). Rector: Adolf Arndt. Faculties: Same as in Berlin; also 40 institutions like those in Berlin; 125 professors and 977 students. Library of 463,500 volumes.

Marburg.—Universität (1527). Rector: Doctor Korschelt. Faculties: Same as in Berlin; also 38 institutions like those in Berlin; 122 professors and 1,227 students. Library of 350,000 volumes.

Münster.—Universität (1771). Rector: Leo von Savigny. Faculties: Catholic theology, law, and philosophy; also 21 institutions like those in other German universities; 72 professors and 1,305 students. Library of 278,000 volumes.

(b) *Polytechnica.*

Aix-la-Chapelle (*Aachen*).—Technische Hochschule (1870). Rector: Doctor Bräuler. Departments: Architecture, civil engineering, mechanical engineering, mining and metallurgy, general department; also higher commercial school; 74 professors and 797 students. Library of 58,700 volumes and 676,400 patents.

Digitized by Google

Charlottenburg (*Berlin*).—Technische Hochschule (1879). Rector: Doctor Miethe. Departments: Architecture, civil engineering, mechanical engineering, shipbuilding, chemistry and metallurgy, general department; 170 professors and 4,157 students. Library and office for testing material.

Danzig.—Technische Hochschule (1904). Rector: Doctor Mangold. Departments: Architecture, civil and mechanical engineering, shipbuilding, chemistry, and general department; 61 professors. Library.

Hanover.—Technische Hochschule (1831). Rector: Professor Barkhausen. Departments: Architecture, civil and mechanical engineering, chemistry and electrotechnics, general department; 62 professors and 1,987 students. Library of 163,000 volumes.

(c) *Other higher seats of learning.*

Aix-la-Chapelle (*Aachen*).—Handels Hochschule in connection with Technische Hochschule (see above); 102 students.

Berlin.—Landwirthschaftliche Hochschule (1806). Rector: Doctor Orth; 18 institutions such as experimental stations, laboratories, and collections; 42 professors and 836 students. Library.

Berlin.—Thierärztliche Hochschule (1790). Rector: Doctor Fröhner; 29 professors and 534 students. Library of 12,380 volumes.

Berlin.—Geologisches Landesamt und Bergakademie (1873). Director: Professor Schmeisser; 36 professors and 242 students. Library.

Berlin.—Lehranstalt für die Wissenschaft des Judenthums (1872). Vorsteher: Dr. S. Neumann; 4 professors.

Berlin.—Institut für Infektions-Krankheiten (1895). Director: Doctor Gaffky; 18 professors.

Berlin.—Seminar für Orientalische Sprachen, is part of the University (see above); 23 professors and 460 students.

Braunsberg.—Lyceum Hosianum (1568). Rector: Professor Niedenzu. Faculties: Theology and philosophy; 13 professors and 54 students. Library of 22,350 volumes.

Breslau.—Jüdisch Theologisches Seminar (1854); 4 professors and 40 students. Library of 22,000 volumes.

Clausthal.—Berg-Akademie (1775). Director: G. Köhler; 14 professors and 171 students. Library of 30,000 volumes.

Cologne.—Städtische Handels-Hochschule (1901). Director: Herm. Schumacher; 40 professors and 778 students. Library.

Düsseldorf.—Kunst-Akademie (1767). Director: Peter Janssen. Library of 4,000 volumes and several art collections with 51,040 objects.

Eberswalde.—Forst-Akademie (1830). Director: O. Riebel; 17 professors and 73 students. Library of 18,500 volumes and several collections.

Frankfort on the Main.—Akademie für Sozial und Handelswissenschaften (1901). Rector: Dr. K. Burchard; 33 professors and 546 students. Library.

Hanover.—Thierärztliche Hochschule (1778). Director: Doctor Dammann; 17 professors and 262 students; 5 clinics and library of 10,000 volumes.

Münden.—Forst-Akademie (1868). Director: Doctor Weise; 12 professors and 50 students. Library of 8,500 volumes.

Poppelsdorf-Bonn.—Landwirthschaftliche Akademie (1847). Director: Theodor Baron von der Goltz; 47 professors and 449 students.

Posen.—Akademie (for scientific study) (1903). Rector: Eugen Kühnemann; 16 professors, 10 assistants.

Jodhpur.—Jaswant College. Principal: P. S. Prakash; 7 professors and 40 students.

Kapurthala.—Rundhir College. Principal: H. P. Sandyal; 4 professors.

Krishnagar.—Krishnagar College. Principal: J. Bhaduri; 6 professors and 90 students. Library of 8,745 volumes.

Kumbakonum.—Kumbakonum College. Principal; H. S. Duncan; 6 professors and 190 students. Library of 4,272 volumes.

Lahore.—Oriental College. Principal: A. C. Woolner; 15 professors and 164 students. Library of 2,324 volumes.

Lahore.—Government College. Principal: S. Robson; 10 professors and 220 students. Library of 4,000 volumes.

Lahore.—Forman Christian College. Principal: Rev. J. C. R. Ewing; 13 professors and 350 students.

Lahore.—Dayanand Anglo-Vedic College. Principal: L. H. Raj; 12 professors and 397 students.

Lahore.—Islamia College. Principal: Abdul Aziz; 8 professors and 60 students.

Lahore.—University Law College. Principal: George Serrell; 7 professors and 230 students.

Lahore.—Lahore Medical College. Principal: F. F. Perry; 9 professors and 190 students. Library of 6,000 volumes.

Lucknow.—Canning College. Principal: A. H. Pirie; 12 professors and 361 students.

Lucknow.—Reid Christian College. Principal: C. L. Bare; 8 professors and 43 students.

Madras.—College of Engineering. Principal: H. D. Love; 15 professors and 339 students. Library of 4,273 volumes.

Madras.—Madras Christian College. Principal: Reverend Doctor Miller; 13 professors and 750 students. Library of 4,121 volumes.

Madras.—College of Agriculture. Principal: W. Kees; 6 professors and 50 students.

Madras.—Medical College. Principal: J. Maitland; 23 professors and 489 students.

Madras.—Presidency College. Principal: J. B. Bilderbeck; 25 professors and 482 students. Library of 10,039 volumes.

Mangalore.—Government College. Principal: P. P. de Rozaris; 8 professors and 150 students.

Mangalore.—St. Aloysius College (1880). Rector: Rev. J. Moore; 14 professors and 452 students. Library of 7,000 volumes.

Meerut.—Meerut College. Principal: W. Jesse; 13 professors and 150 students.

Mysore.—Maharaja's College. Principal: J. Weir; 11 professors and 131 students.

Nagpur.—Hislop College. Principal: Rev. D. Whitton; 8 professors.

Patna.—Patna College. Principal: C. R. Wilson; 13 professors and 190 students. Library of 5,000 volumes.

Poona.—College of Science. Principal: W. C. Scudmore; 8 professors and 190 students.

Poona.—Deccan College. Principal: F. G. Selby; 9 professors and 160 students. Library of 4,500 volumes.

Rajahmundry.—Rajahmundry College. Principal: M. Hunter; 9 professors and 216 students. Library of 4,570 volumes.

Rajshahi.—Rajshahi College. Principal: B. K. K. Banerji; 9 professors and 170 students.

Rangoon.—Rangoon College. Principal: H. H. Rose; 9 professors. Library of 3,000 volumes.

Rangoon.—Baptist College. Principal: Rev. J. N. Cushing; 5 professors, several assistants, and 825 students. Library.

Roorkee.—Thompson Engineering College. Principal: E. H. de Atkinson; 24 professors and 390 students. Library of 20,867 volumes.

Digitized by Google

Serampur.—Serampur College. Principal: Rev. E. S. Summers; 4 professors and 110 students.

Shimoga.—Shimoga College. Principal: A. G. King: 7 professors.

Trichinopoly.—St. Joseph's College. Rector: Rev. L. Besse; 35 professors, 33 teachers, and 1,500 students. Library of 5,000 volumes.

Trivandrum.—Maharaja's College. Principal: A. C. Mitchell; 13 professors and 1,000 students.

Ujjin.—Madhava College. Principal: P. B. N. Dhekne; 6 professors.

Vijayanagaram.—Maharaja's College. Principal: K. Ramanujachari; 9 professors and 400 students.

IRELAND.

(a) *Universities.*

Dublin.—University of Dublin (Trinity College, 1591). Vice-Chancellor: D. H. Madden; 55 professors, 22 assistants, and 950 students. Library of 280,741 volumes.

Dublin.—Royal University of Ireland (1880). Vice-Chancellor: Rev. M. Molloy; 4 officers, 43 fellows, 38 examiners, 4 external examiners. This is an examining institution.

(b) *Colleges.*

Belfast.—Queen's College (1845). President: Th. Hamilton; 28 professors and 367 students. Library of 55,430 volumes.

Cork.—Queen's College (1845). President: Sir R. Blennerhassett; 25 professors and 212 students. Library.

Galway.—Queen's College (1845). President: Alex. Anderson; 23 professors and 118 students. Library.

(c) *Technical school and other higher seats of learning.*

Belfast.—Municipal Technical Institute (1901). Principal: F. C. Forth. Day and evening classes with over 4,000 students.

Dublin.—Royal College of Science for Ireland (1901). Dean: W. N. Hartley; 16 professors and 11 assistants. Library and museum.

Dublin.—Metropolitan School of Art. Head master: R. H. A. Willis; 6 professors.

Dublin.—Royal College of Surgeons in Ireland (1784). President: Arthur Chance.

ITALY.

(a) *Universities.*

Bologna.—Regia Università degli Studi (1119). Rector: Vittorio Puntoni. Faculties: Philosophy and letters, natural science, agriculture, law, medicine, pharmacy, veterinary science, engineering, and a general department; also 26 institutions such as clinics, seminaries, laboratories, and collections; 215 professors and 1,470 students. Library of 308,000 volumes.

Cagliari.—Regia Università degli Studi (1596). Rector: Ignacio Fenoglio. Faculties: Law, medicine, natural science, and pharmacy; also 21 institutions like those in Bologna; 50 professors and 270 students. Library of 85,500 volumes.

Camerino.—Libera Università degli Studi (1727). Rector: Servilio Marsili. Faculties: Law, medicine, pharmacy, veterinary science; also a few institutions like those in Bologna; 29 professors and 313 students. Library of 30,000 volumes.

Catania.—Regia Università degli Studi (1444). Rector: G. Clementi. Faculties: Law, medicine, natural science, philosophy and letters, and pharmacy; also 23 institutions like those in Bologna; 108 professors and 1,060 students. Library of 101,606 volumes.

Ferrara.—Libera Università di Ferrara (1391). Rector: Giovanni Martinelli. Faculties: Law, natural science, medicine, and pharmacy; also 4 institutions like those in Bologna; 30 professors and 152 students. Library of 94,000 volumes.

Digitized by Google

Genoa.—Regia Università degli Studi (1812). Rector: Nicola Landolfi. Faculties: Law, medicine, natural science, philosophy, engineering, and pharmacy; also 24 institutions like those in Bologna; 135 professors and 1,325 students. Library of 182,544 volumes.

Macerata.—Regia Università degli Studi (1540). Rector: Oreste Ranelletti. Faculty: Law only; 15 professors and 234 students. Library.

Messina.—Regia Università degli Studi (1548). Rector: Vittorio Martinetti. Faculties: Law, medicine, natural science, philosophy, and pharmacy; also 24 institutions like those in Bologna; 90 professors and 645 students. Library of 41,358 volumes.

Modena.—Regia Università degli Studi (1683). Rector: Giuseppe Triani. Faculties: Law, medicine, natural science, pharmacy, and veterinary science; also 24 institutions like those in Bologna; 70 professors and 715 students. Library of 30,238 volumes.

Naples.—Regia Università degli Studi (1224). Rector: Filippo Masci. Faculties: Law, medicine and pharmacy, natural science, and philosophy; also 32 institutions like those in Bologna; 434 professors and 5,170 students. Library of 282,653 volumes.

Padua.—Regia Università degli Studi (1222). Rector: R. Nob Nasini. Faculties: Law, medicine, natural science, philosophy, engineering, and pharmacy; also 42 institutions like those in Bologna; 205 professors and 1,364 students. Library of 224,782 volumes.

Palermo.—Regia Università degli Studi (1779). Rector: Antonio Salinas. Faculties: Law, medicine, natural science, philosophy, pharmacy, and engineering; also 35 institutions like those in Bologna; 176 professors and 1,400 students. Library of 196,301 volumes.

Parma.—Regia Università degli Studi (1025). Rector: Leone Pesci. Faculties: Law, medicine, natural science, veterinary science, and pharmacy; also 28 institutions like those in Bologna; 65 professors and 675 students. Library of 342,367 volumes.

Pavia.—Regia Università degli Studi (1361). Rector: Camillo Golgi. Faculties: Law, medicine, natural science, philosophy, and pharmacy; also 32 institutions like those in Bologna; 120 professors and 1,542 students. Library of 261,100 volumes.

Perugia.—Università Libra degli Studi (1266). Rector: Giuseppe Bellucci. Faculties: Law, medicine, pharmacy, and veterinary science; also 17 institutions like those in Bologna; 40 professors and 348 students. Library of 54,000 volumes.

Pisa.—Regia Università degli Studi (1343). Rector: David Supino. Faculties: Law, medicine, philosophy, natural science, engineering, pharmacy, and veterinary science; also a higher agricultural school and 31 institutions like those in Bologna; 137 professors and 1,100 students. Library of 226,000 volumes.

Rome.—Regia Università degli Studi (1303). Rector: Giuseppe Cugnoni. Faculties: Law, medicine, natural science, philosophy, engineering, pharmacy; also a complementary course in agriculture and a diplomatic and consular school; 33 institutions like those in Bologna; 274 professors and 3,012 students. Library of 195,877 volumes.

Rome.—Regia Instituto Superiore di Magistero Femminile (1882). Director: G. A. Costanzo; 18 professors and 160 students.

Sassari.—Regia Università degli Studi (1556). Rector: Giovanni Dettori. Faculties: Law, medicine, and pharmacy; also 18 institutions like those in Bologna; 41 professors and 160 students. Library of 80,755 volumes.

Siena.—Regia Università degli Studi (1357). Rector: Domenico Barduzzi. Faculties: Law, medicine, and pharmacy; also 20 institutions like those in Bologna; 61 professors and 226 students. Library of 117,713 volumes.

Turin.—Regia Università degli Studi (1412, 1632). Rector: G. P. Chironi. Faculties: Law, medicine, philosophy, natural science, pharmacy, and two colleges; also 26 institutions like those in Bologna; 203 professors and 2,700 students. Library.

Urbino.—Libera Università degli Studi (1671). Rector: Antonio Vanni. Faculties: Law and pharmacy; 18 professors and 184 students. Library of 33,000 volumes.

(b) *Colleges.*

Florence.—Reg. Instituto di Studi Superiori, Pratici e di Perfezionamento (1872). President: March. Carlo Ridolfi. Faculties: Philosophy, natural science, medicine, and pharmacy; also 21 institutions, such as clinics, laboratories, and cabinets; 120 professors and 603 students. Libraries (two) of 69,000 and 55,000 volumes.

Florence.—Reg. Instituto Superiore di Magistero Femminile. Director: Agostino Grandi; 17 professors and 150 students.

Milan.—Reg. Accademia Scientifico-Letteraria (1859). President: Francesco Novati. Faculties: Philosophy and science; 30 professors and 147 students. Library.

Rome.—Pontificium Collegium Urbanum de Propoganda Fide (1572). Rector: Monsign. Filippo Camassei. Faculties: Theology, philosophy, philology, oriental languages; 30 professors and 420 students. Two libraries of, together, 50,000 volumes.

Rome.—Pontificia Universitas Gregoriana in Collegio Romano (1582). Rector: P. Emigdius Rossi. Faculties: Theology, canonic law, and philosophy; 23 professors and 1,025 students. Library.

Rome.—Instituto d'Inseguamento Scientifico-Letterario del Pontifico Seminario Romano (1556). Rector: Monsign. G. Sebastianelli. Faculties: Theology, law, philosophy, and letters; 40 professors and 490 students. Library.

Rome.—Collegio di San Tommaso d'Aquino (1577). Rector: R. P. Enrico Buonpensiere; 10 professors and 160 students.

Rome.—Collegio di Sant' Anselmo (1888). Rector: P. L. Janssens; 9 professors and 60 students.

Note.—There are in Rome a number of small ecclesiastical colleges which can not be classified, particulars being wanting.

(c) *Polytechnica.*

Milan.—Instituto Tecnico Superiore (1862). Director: G. Colombo; 49 professors, 20 assistants, and 559 students.

Naples.—Scuola d'Applicazione per gli Ingegneri (1863). Director: Gaetano Bruno; 31 professors and 135 students. Library of 11,100 volumes.

Turin.—Scuola d'Applicazione per gli Ingegneri (1874). Director: Angelo Reycend; 12 professors, 20 assistants, and 573 students.

Note.—There are also engineering schools connected with the following universities: Bologna, Genoa, Padua, Palermo, Pisa, and Rome, which see above.

(d) *Other higher seats of learning.*

Bologna.—Agricultural department of university, see above.

Florence.—Instituto di Scienze Sociali Cesare Alfiri (1874). Seventeen professors. Library.

Milan.—Università Commerciale Luigi Bocconi (1902). President: L. Sabbatian; 20 professors and 157 students. Library.

Milan.—Scuola Superiore di Medicina Veterinaria (1808). Director: N. Lanzillotti-Buonsanti; 20 professors and 122 students.

Milan.—Scuola Superiore di Agricoltura. Director: G. Kœrner; 11 professors.

Naples.—Scuola Superiore di Medicina Veterinaria. Director: S. Baldassarre; 19 professors and 200 students.

Naples.—Instituto Orientale (1727). Director: Enrico Cocchia; 14 professors and 271 students.

Naples.—Instituto di Belle Arti. President: A. d'Orsi; 17 professors.

Pisa.—Agricultural and veterinary schools are departments of the university, see above.

Pisa.—Scuola Normale Superiore (1862). President: The rector of the university; 6 professors. Library of 14,400 volumes.

Portici.—Scuola Superiore di Agricoltura (1872). Director: Oreste Bordiga; 18 professors and 100 students. Library of 14,000 volumes.

Digitized by Google

Rome.—Numerous small schools devoted to special studies; also a school of fine arts.

Turin.—Scuola Superiore di Medicina Veterinaria. Director: R. Bassi; 15 professors and 90 students.

Vallombrosa.—Instituto Forestale (1869). Director: F. Piccioli; 40 students.

Note.—Pharmaceutical schools are found in connection with medical faculties of universities, which see. Veterinary schools are connected with the universities of Bologna, Camerino, Modena, Parma, Perugia, and Pisa. Art schools, 12 in number, are found in Bologna, Carrara, Florence, Lucca, Milan, Modena, Naples, Palermo, Rome, Turin, and Venice.

JAPAN.

(a) *Universities.*

Kyoto.—Imperial University (1897). President: H. Kinoshita. Faculties: Law, medicine, science, and engineering; 120 professors and 1,199 students. Library.

Tokyo.—Imperial University (1868). President: K. Yamagawa. Faculties: Law, medicine, engineering, philology, natural science, agriculture; also 5 institutions such as hospitals and collections; 308 professors and 3,771 students. Library of 345,844 volumes.

(b) *Other higher seats of learning.*

Fukuoka.—Medical college (affiliated with University of Kyoto); 20 professors and 163 students.

Tokyo.—Engineering school, part of the university, see above. Agricultural school, part of the university also.

MEXICO.

Mexico.—Instituto Médico Nacional (1888). Director: Dr. Fernando Altamirano; 16 professors. Library of 3,000 volumes.

NETHERLANDS.

(a) *Universities.*

Amsterdam.—Universiteit van Amsterdam (1632). Rector: I. J. de Bussy. Faculties: Theology, law, natural science, medicine, and philosophy; also 20 institutions such as seminaries, clinics, laboratories, and collections; 87 professors and 1,133 students. Library.

Amsterdam.—Free University. Rector: Dr. H. Bavinck. Faculties: Theology, philosophy, and law; 14 professors and 144 students. Library.

Groningen.—Rijks-Universiteit te Groningen (1614). Rector: Dr. J. W. van Wijhe. Faculties: Theology, law, medicine, natural science, letters; also 18 institutions like those in Amsterdam; 48 professors and 375 students. Library 100,700 volumes.

Leyden.—Rijks-Universiteit (1575). Rector: Dr. J. van Leeuwen. Faculties: Law, medicine, natural science, philosophy, and theology; also 17 institutions like those in Amsterdam; 74 professors and 1,170 students. Library of over 200,000 volumes.

Utrecht.—Rijks-Universiteit (1636). Rector: Dr. J. M. S. Baljon. Faculties: Theology, law, medicine, philosophy, and letters; also 22 institutions like those in Amsterdam; 65 professors and 1,051 students. Library of 250,000 volumes.

(b) *Polytechnicum and other higher seats of learning.*

Delft.—Polytechnische Hochschule (1864). Director: J. Kraus; 37 professors and 1,084 students. Library.

Utrecht.—Rijks Veeartsenijschool. Director: Dr. A. W. H. Wirtz; 8 professors and 104 students.

Digitized by Google

Wageningen.—Rijks Landbouwschool (1876). Director: L. Brockema; 5 professors as heads of divisions; each has a staff of professors and regular as well as special students.

Haarlem.—Industrial Art School (in connection with museum).

NORWAY.

Christiania.—Kongelige Frederiks Universitet (1811). President: Professor Nielsen. Faculties: Theology, law, medicine, philosophy, and natural science; also 28 institutions, such as clinics, collections, and laboratories; 95 professors and 1,500 students. Library of 403,000 volumes.

PARAGUAY.

A national college at Asunción.

PERSIA.

Several Mohammedan colleges or schools.

PERU.

Lima.—Universidad Mayor de San Marcos (1551). Rector: F. G. Calderon. Faculties: Theology, law, medicine, philosophy and letters, natural science, and administration; 93 professors. Library.

PALESTINE.

Jerusalem.—École Pratique d'Études Bibliques (1890); 6 professors and 27 students.

PHILIPPINE ISLANDS.

Manila.—Real y Pontificia Universidad de Santo Tomas (1605). Faculties: Theology, law, medicine, philosophy and letters, science, and pharmacy; 48 professors and about 1,200 students. Library and observatory.

PORTUGAL.

Coimbra.—Universidade de Coimbra (1288). Rector: Dr. M. Pereira Dias. Faculties: Theology, law, medicine, mathematics, and philosophy; also 18 institutions, such as clinics, cabinets, laboratories, etc.; 72 professors and 1,700 students. Library of about 100,000 volumes.

Lisbon.—Curso Superior de Lettras (1858). Director: E. C. Pedroso; 10 professors and 110 students.

Lisbon.—Escola Polytechnica (1837). Director: L. d'Almeida e Albuquerque; 24 professors and 312 students.

Lisbon.—Escola Medico-Cirurgica (1836). Director: B. Pitta; 18 professors and 310 students. Connected with this is the following school: Escola da Pharmacia de Lisboa; 5 professors.

Lisbon.—Instituto de Agronomia e Veterinaria (1852). Director: F. A. Alvares Pereira.

Oporto.—Academia Polytechnica (1837). Director: F. G. Teixeira; 25 professors and 200 students. Library.

ROUMANIA.

(a) *Universities.*

Bukharest.—Universitatea din Bucuresti (1864). Rector: C. Dimitrescu-Jasi. Faculties: Natural science, philosophy, law, medicine, and theology; also 39 institutions, such as clinics, seminaries, laboratories, and collections; 91 professors and 3,304 students. Libraries (2) of 66,679 and 115,246 volumes.

Digitized by Google

Jassy.—Universitatea din Jassy (1860). Rector: C. Climescu. Faculties: Law, philosophy and letters, natural science, and medicine; also 18 institutions, such as clinics, laboratories, and collections; 56 professors and 782 students. Library of 160,000 volumes.

(b) *Other higher seats of learning.*

Bukharest.—Scoala Superioară de Medicină Veterinară (1861). Director: A. J. Locusteanu; 11 institutions, such as clinics and laboratories; 11 professors and 52 students.

Bukharest.—Academy of Fine Arts (1864). Director: G. D. Mirea.

RUSSIA.

[See also SIBERIA.]

(a) *Universities.*

Helsingfors (Finland).—Kejserliga Alexanders Universitet (1640). Rector: E. I. Hjelt. Faculties: Theology, law, medicine, and philosophy; also 26 institutions, such as clinics, seminaries, laboratories, and collections; 143 professors and 2,772 students. Library of 192,000 volumes.

Jurjew (formerly Dorpat).—Imperatorskij Jurjevskij Universitet (1632). Rector: G. V. Levickij. Faculties: Theology, law, medicine, history and philology, physics, and mathematics; also a few institutions; 96 professors and 1,849 students. Library of 216,875 bound volumes and 155,579 pamphlets.

Kazan.—Imperatorskij Kasanskij Universitet (1804). Rector: D. I. Dubjago. Faculties: History and philology, physics and mathematics, law, and medicine; also 38 institutions like those in Helsingfors; 115 professors and 1,131 students. Library of 226,636 volumes.

Kharkof.—Imperatorskij Charkovskij Universitet (1804). Rector: N. M. Alexejenko. Faculties: Philosophy, physics and mathematics, law, and medicine; also 33 institutions, such as clinics, seminaries, laboratories, and collections; 125 professors and 1,380 students. Library of nearly 175,000 volumes.

Kief.—Imperatorskij Universitet Sv. Vladimira (1832). Rector: N. V. Bobreckij. Faculties: Same as in Kazan; also 35 institutions like those in Helsingfors; 138 professors and 2,640 students. Library of 127,000 volumes.

Moscow.—Imperatorskij Moskovskij Universitet (1755). Rector: L. K. Lachtin. Faculties: History and philology, physics and mathematics, law, and medicine; also 42 institutions like those in Helsingfors; 321 professors and 4,845 students. Library of 305,730 volumes.

Odessa.—Imperatorskij Novorossijskij Universitet (1865). Rector: A. N. Dĕrevickij. Faculties: Same as in Moscow; 113 professors and 1,808 students. Library of 245,000 volumes.

St. Petersburg.—Imperatorskij St. Petersbergskij Universitet (1819). Rector: A. M. Zdanov. Faculties: Same as in Moscow; also 25 institutions like those in Helsingfors; 302 professors and 3,990 students. Library of 328,918 volumes.

Warsaw.—Imperatorskij Varšavskij Universitet (1869). Rector: G. K. Uljanov. Faculties: Same as in Moscow; 78 professors and 1,400 students. Library of 525,993 volumes.

(b) *Polytechnica.*

Helsingfors.—Polytekniska Institutet i Finland (1847). Director: R. H. Mellin. Several laboratories and shops; 43 professors and 421 students. Library of 3,000 volumes.

Kharkof.—Technologiceskij Institut Imperatora Alexandra III. Director: N. N. Schiller. Departments: Mechanical engineering and chemistry; 40 professors and 1,200 students. Library.

Digitized by Google

Kief.—Technologičeskij Institut Imperatora Alexandra II (1898). Director: M. I. Konovalov. Departments: Civil engineering, mechanical engineering, technical chemistry, agriculture; 48 professors and 1,370 students. Library of 10,100 volumes.

Moscow.—Imperatorskij Moskovskeje Techničeskoje Učilišče (1832). Director: S. A. Fedorov. Departments: Mechanical and civil engineering; several laboratories and shops; 73 professors and 1,160 students.

Moscow.—Imperatorskij Technčskij Učilišče (1896). Director: Phil. Maximenko; 24 professors, 44 assistants, and 381 students. Library.

St. Petersburg.—Technologičeskij Institut Imperatora Nikolaja I (1828). Director A. A. Voronov; 63 professors and 1,470 students. Library.

St. Petersburg.—Technologičeskij Institut Sosnowka (1902). Director: Prince A. G. Gagarin. Departments: Electro-mechanics, economy, shipbuilding, and metallurgy; 50 professors and about 700 students. Library.

St. Petersburg.—Institut Inženerov Putej Soobščenija (1809). Director: L. F. Nikolaï; 30 professors and 844 students. Library of 40,000 volumes.

St. Petersburg.—Institut Graždanskich Inženerov (1877). Director: V. V. Ewald; 11 professors, 60 teachers, and 530 students. Library of 12,000 volumes.

St. Petersburg.—Electro-Technical Institut (1899). Director: N. N. Kačalov; 28 professors, 15 assistants, and 362 students.

Riga.—Riżskoje Politechinčeskoje Učilišče (1862). Director: Dr. P. Walden. Six departments and 22 institutions; 55 professors, 20 assistants, and 1,546 students. Library of 39,138 volumes.

Warsaw.—Warschavskago Polytechničeskago Instituta (1898). Director: A. J. Lagorio; 49 professors and 982 students. Library of 5,600 volumes.

(c) *Other higher seats of learning.*

Ervis (Finland).—Institute of Forestry (1862). Director: B. Ericson; 6 professors and 30 students.

Helsingfors.—Agricultural and Economic Section of University, which see above.

Jaroslawl.—Demidovskij Juridičeskij Licej (1803). Director: E. N. Berendts. Law and theological school; 12 professors and 563 students. Library of 43,502 volumes.

Jekaterinoslaw.—Higher Mining School. Director: S. N. Sučkov; 30 professors and teachers, 250 students. Library.

Jurjew (Dorpat).—Jurjevskij Veterinarnyj Institut. Director: K. von Raupach; 11 professors and 310 students. Library of 17,100 volumes.

Kazan.—Kazanskaja Duchovnaja Akademija (1798). Rector: Bishop Alexij. Theological school; 40 professors and 260 students. Library.

Kazan.—Kazanskij Veterinarnyj Institut. Director: I. N. Lange; 22 professors and 571 students. Library of 11,114 volumes.

Kief.—Kijevskaja Duchovnaja Akademija (1705). Rector: Bishop Platon. Theological school; 28 professors and 187 students. Library.

Moscow.—Moskovskaja Duchovnaja Akademija (1654). Rector: Bishop Volokolamskij. Theological school; 28 professors and 199 students. Library of 120,000 volumes.

Moscow.—Lazarevskij Institut Vostočnych Jazykov (1815). Director: V. F. Miller. School of Oriental languages; 16 professors and 10 students.

Moscow.—Moskovskij Selso Chozjajstvennyj Institut (1776). Director: A. P. Simkov. Agricultural school; 30 professors and 266 students.

Nezin.—Istoriko-Filologičeskij Institut (1820). Director: Fr. Ferd. Gelbcke. School of history and philology; 20 professors and 100 students. Library of 59,219 volumes.

Novaja-Alexandria.—Institut Selskago Chosjaistva i Lěsovodstva (1831). Director: P. V. Budrin. Agriculture and forestry; 21 professors and 325 students.

Digitized by Google

St. Petersburg.—St. Petersburgskaja Duchovnaja Akademija (1797). Rector: Bishop Sergij. Theological school; 30 professors and 242 students. Library of 59,100 volumes.

St. Petersburg.—Rimsko-Katoličeskaja Duchovnaja Akademija (1842). Rector: Prelate Zarnowiecki. School of Roman Catholic theology; 13 professors. Library of 50,000 volumes.

St. Petersburg.—Imperatorskij Učilišče Pravovědenija (1835). Director: V. V. Olderogge. Law school; 36 professors and 330 students. Library.

St. Petersburg.—Alexandrovskaja Vojenna Juridičeskaja Akademija. Chief: Gen. F. N. Platonov. Military law school; 21 professors.

St. Petersburg.—Imperatorskij Alexandrovskij Licej (1811). Director: A. P. von Salomon. Law school; 38 professors.

St. Petersburg.—Imperatorskij Istoriko-Filologičeskij Institut (1867); school of history and philology; 20 professors and 87 students. Library.

St. Petersburg.—Archeological Institute (1877). Director: N. V. Pokrovskij; 13 professors. Library of 14,000 volumes.

St. Petersburg.—Vojonno-Medicinskaja Akademija (1798). President: A. I. Tareneckij. Military medical school; 128 professors and 750 students. Library. In connection with this are two hospital clinics with 28 professors and 15 assistants.

St. Petersburg.—Institute for Experimental Medicine (1890). Director: S. N. Vinogradskij; 20 professors. Library of 13,458 volumes.

St. Petersburg.—Gornyj Institut (1773). Director: G. G. Lebedev. Mining school; 30 professors and 15 assistants, 600 students. Several institutes and a library of 250,000 volumes.

St. Petersburg.—Lěsnoj Institut (1803). Director: E. E. Kern. Forestry school; 22 professors and 15 assistants; 540 students. Library of 25,000 volumes.

St. Petersburg.—Imperatorskij Klinič. Institut. Director: G. F. Tiling. Clinical institute; 19 professors.

St. Petersburg.—Higher courses for women (1889). Director: N. P. Rajew. Historical-philosophical and physical-mathematical department; 67 professors and 1,300 students. Library.

St. Petersburg.—Zenskij Medicinskij Institut (1897). Director: D. O. Ott. Women's medical institute; 40 professors, 21 assistants, and 1,314 students. Library.

St. Petersburg.—Zemskij Pedagogičeskij Institut. Director: Sergius F. Platonov. Women's pedagogical institute; 15 professors.

Warsaw.—Varšavskij Veterinarnyj Institut. Director: I. Sadovskij. Veterinary college; 14 professors.

SCOTLAND.

(a) *Universities.*

Aberdeen.—University of Aberdeen (1494). Rector: Ch. T. Ritchie. Faculties: Philosophy, natural science, theology, law, medicine; also 11 institutions, museums, and clinics; 80 professors and about 1,100 students. Library of 140.000 volumes.

Edinburgh.—University of Edinburgh (1583). Rector: Sir Robert B. Finlay. Faculties: Philosophy, natural science, theology, law, and medicine; also music; a large number of institutions; 100 professors and 2,950 students. Library of 217,000 volumes.

Glasgow.—University of Glasgow (1451). Rector: George Wyndham. Faculties: Same as in Edinburgh; no music, but commerce; 84 professors and 2,202 students. Library of 180,000 volumes.

St. Andrews.—University of St. Andrews (1411). Rector: Andrew Carnegie. Comprises St. Salvador, St. Leonards, and St. Mary colleges; 27 professors, 12 assistants, and 287 students. Library of 115,000 volumes.

Aberdeen.—United Free Church College (1846). Principal: S. D. F. Salmond. Theological school; 10 professors, and a library of 30,000 volumes.

Dundee.—University College (1880). Principal: J. Y. Mackay; 40 professors and 213 students. Library of 10,000 volumes.

Edinburgh.—New College (1847). Principal: Robert Rainy; 8 professors. Library of 50,000 volumes.

Glasgow.—Glasgow College. Principal: Th. M. Lindsay; 10 professors. Library.

(c) *Polytechnicum and other schools.*

Glasgow.—The Glasgow and West of Scotland Technical College (1886). Director: H. F. Stockdale; 25 professors and 69 assistants; 471 students and 4,212 evening students. Laboratories and museums. Library of 15,000 volumes.

Glasgow.—The West of Scotland Agricultural College (1886). Formerly a part of the college preceding, now independant; 17 professors.

Edinburgh.—School of Medicine of the Royal Colleges (1802). Secretary: R. N. Ramsay: 57 professors and 1,200 students.

Edinburgh.—Royal College of Physicians (1681). An examining board. President: Th. S. Clouston. Library of 70,000 volumes.

Edinburgh.—Royal College of Surgeons (1505). An examining board. President: Sir P. H. Watson.

Edinburgh.—Royal Veterinary College (1823). Principal: J. R. U. Dewar; 8 professors and about 100 students. Library of 500 volumes.

SERVIA.

Belgrade.—Srpska Kraljevska Velika Skola. Rector: S. Urošević. Faculties: philosophy, law, and technology. Some laboratories, seminaries, and collections; 58 professors, 7 assistants, and 490 students. Library of 53,500 volumes.

SIBERIA.

Tomsk.—Tomskij Univèrsitet (1888). Rector: M. G. Kurlov. Faculties: Medicine and law; 42 professors and 640 students. Library of 200,000 volumes.

Tomsk.—Technologičeskij Institut Imperatora Nikolaja II (1896). Director: J. L. Zubašov; 46 professors and 812 students.

Vladivostok.—Oriental Language School (1899). Director: D. M. Pozdnejev; 16 professors and 70 students. Library of 16,000 volumes.

SPAIN.

(a) *Universities.*

Barcelona.—Universidad de Barcelona (1450). Rector: R. Rodriguez y Méndez. Faculties: Philosophy, law, natural science, medicine, and pharmacy; 58 professors and about 1,900 students. Library of 156,000 volumes.

Granada.—Universidad de Granada (1531). Rector: E. Garcia Solá. Faculties: Philosophy, law, natural science, medicine, and pharmacy; 49 professors and about 1,400 students. Library of 40,000 volumes.

Madrid.—Universidad Central de España (1508). Rector: F. Fernandez y González. Faculties: Philosophy, law, natural science, medicine, and pharmacy; 123 professors, 42 assistants, and 5,054 students. Libraries of, together, 218,000 volumes.

Oviedo.—Universidad Literaria (1578). Rector: F. P. de Aramburuy Zuloaga. Faculties: Philosophy, law, natural science, and school of social science; 30 professors and 905 students. Library of 40,000 volumes.

Digitized by Google

Salamanca.—Universidad Literaria (1243). Rector: M. de Unamuno y Juga. Faculties: Philosophy and law; 25 professors and 1,200 students. Library of 80,200 volumes.

Santiago.—Universidad (1504). Rector: F. Romero y Blanco; 40 professors. Library of about 40,000 volumes.

Saragossa.—Universidad (1474). Rector: M. Rippollès Baranda; 48 professors. Library of 45,250 volumes.

Seville.—Universidad (1502). Rector: M. Laraña y Ramirez; 28 professors. Library of 62,000 volumes.

Valencia.—Universidad Literaria (1500). Rector J. M. Machi y Burguete. Faculties: Philosophy, law, natural science, and medicine; 40 professors and 1,700 students. Library of 61,000 volumes.

Valladolid.—Universidad (1346). Rector: A. Alonzo Cortés. Faculties: Law, science, medicine, philosophy, and letters; 43 professors and 1,400 students. Library of 35,000 volumes.

(b) *Polytechnica.*

Madrid.—Escuela Superior de Arquitectura (1844). Director: F. Aparíci y Soriano; 19 professors and 220 students. Library.

Madrid.—Escuela de Ingenieros de Caminos, Canales y Puertos. Director: P. Perez de Sala; 15 professors and 80 students.

(c) *Other higher seats of learning.*

Cadiz.—Facultad de Medicina (1748). Part of University of Seville; 17 professors. Library of 8,000 volumes.

Cordoba.—Escuela de Veterinaria. Director: A. Ruiz Fernandez; 10 professors.

Leon.—Escuela de Veterinaria. Director: C. Diez Garrote; 8 professors and about 100 students.

Madrid.—Escuela de Ingenieros Agronomos. Director: Z. Espejo; 17 professors.

Madrid.—Escuela de Veterinaria (1792). Director: S. de la Villa y Martin; 10 professors and 345 students. Library.

Madrid.—Escuela Superior de Diplomática (1856). Director: J. de Dios de la Rada y Delgado; 6 professors and 20 students.

Oviedo.—Escuela Práctica de Estudios Políticos y Sociales (1895). A part of the University of Oviedo.

Santiago.—Escuela de Veterinaria. Director: R. Garcia y Suarez; 9 professors.

Saragossa.—Escuela de Veterinaria. Director: J. Robert y Serrat; 9 professors and 276 students.

SWEDEN.

(a) *Universities.*

Gottenborg.—Göteborgs Högskola (1887). Rector: Johann Vising; 26 professors and 1,173 students. Institutes with separate libraries.

Lund.—Kongl. Karolinska Universitetet (1666). Rector: Seved Ribbing. Faculties: Theology, law, medicine, and philosophy; also some institutes; 86 professors and 708 students. Library of 180,000 volumes.

Stockholm.—Stockholms Högskola (1878). Rector: Gerard de Geer; 27 professors and 168 students. Seven institutes and several libraries.

Upsala.—Kongl. Universitetet i Upsala (1477). Rector: Olof Hammersten. Faculties: Theology, law, medicine, and philosophy; also 50 institutes, such as clinics, seminaries, laboratories, and collections; 138 professors and 1,451 students. Library of 315,654 volumes.

(b) *Polytechnicum and other schools.*

Stockholm.—K. Tekinska Högskolan (1798). Director: Anders Lindstedt; 43 professors and 462 students. Library of over 30,000 volumes.

Stockholm.—Karolinska Institutet (1571). Medical school. Rector: K. A. Hampus Count Mörner; 50 professors and 310 students. Library of 40,000 volumes.

Stockholm.—Veterinär-Institutet (1821). Director: R. T. Berg; 9 professors and 55 students. Library of 7,000 volumes.

Stockholm.—Skogs-Institutet. Forestry school; 8 professors and 40 students.

Stockholm.—Tandläkare-Institutet (1898). Dental school; 5 professors and 70 students.

Stockholm.—Kongl. Landtbrucks-Akademien (1811). Agricultural school. Director: Count Fred. Wachtmeister; 6 sections, 12 professors. Library of 9,000 volumes.

SWITZERLAND.

(a) *Universities.*

Basel.—Universität (1460). Rector: C. Chr. Burckhardt. Faculties: Theology, law, medicine, and philosophy, in two sections; also nine scientific collections; 102 professors and 581 students. Library of 250,000 volumes.

Berne.—Kantonale Universität (1834). Rector: Ph. Woker. Faculties: Theology (Protestant and Catholic), law, medicine, veterinary science, and philosophy, in two sections; also 41 institutions, such as clinics, seminaries, laboratories, and collections; 134 professors and 1,653 students, including 500 women. Library of 75,100 volumes.

Freiburg.—Universität (1889). Rector: A. Büchi. Faculties: Theology, law, philosophy, natural science; 66 professors and 549 students. Library of 115,000 volumes.

Geneva.—Université de Genève (1559). Rector: Alfred Martin. Faculties: Theology, law, medicine, philosophy, and natural science; also several collections; 131 professors and 1,115 students. Library (public) of 150,000 volumes.

Lausanne.—Université (1537). Rector: Louis Grenier. Faculties: Theology, law, medicine, philosophy, and natural science; seven collections; 110 professors and 893 students. Libraries with 280,000 volumes.

Zurich.—Universität (1832). Rector: Otto Haab. Faculties: Theology, law, medicine, veterinary science, and philosophy, in two sections; also 39 institutions such as clinics, laboratories, seminaries, and collections; 124 professors and 957 students. Library of about 150,000 volumes.

(b) *Polytechnicum.*

Zurich.—Eidgenössische Polytechnische Schule (1885). Director: Dr. Gnehm. Departments: Architecture, civil and mechanical engineering, chemical technology, agriculture and forestry, natural science, general philosophical and military science; also numerous laboratories and shops; 112 professors and 1,773 students. Library.

(c) *Other higher seats of learning.*

Geneva.—École de Théologie de Genève (1831). President: A. Berthoud; 9 professors and 34 students. Library of 32,000 volumes.

Lausanne.—Faculté de Théologie de l'Église Évangélique (1847). President: Alfred Schroeder; 5 professors and 24 students. Library of 40,000 volumes.

Neuchatel.—Académie (1866). Rector: M. de Tribolet. Faculties: Philosophy, natural science, theology, law; 52 professors and 256 students. Library.

Neuchatel.—Faculté de Théologie de l'Église Évangélique (1873); 4 professors and 15 students.

Zurich.—Veterinary School, Agricultural School, and Forestry School, all connected now with the Polytechnicum, which see above.

THE MEASURE OF A TEACHER'S EFFICIENCY.

BY SUPT. EDWIN P. SEAVER, BOSTON, MASS.

A teacher's efficiency or teaching power, like any other natural power, physical or spiritual, can be known and measured only by its effects.

The efficiency of a machine is measured by the amount of work it will do in a given time against a given amount of resistance—as when we say that a steam engine or a dynamo is of so many horsepower, our unit being accurately defined as the power required to raise 33,000 pounds one foot in one minute against the force of gravitation.

The efficiency of a source of heat is measured by observing the rise in temperature of a given quantity of water to which the heat is applied. The efficiency of a source of light is measured by counting the number of candles required to produce the same illumination.

These are physical powers, and it has been a leading task of physical science to devise methods and instruments of precision for the accurate measurement of their effects.

Teaching power, on the other hand, is a spiritual power, mind operating on mind; and mental science has not yet devised precise methods of measuring the effects of such operations. Therefore quantitative expressions applied to teaching power must needs be metaphorical and vague, not precise and literal.

We do indeed know that the resistance against which teaching power works is often very great; but we also know that it is variable, not constant and measurable like the force of gravitation. An idea may perhaps be conveyed by describing a man or a woman as "a 33-boy-power teacher;" but only vaguely to the minds of persons not acquainted with the boys.

Again, there is no ascertainable fixed ratio between the enthusiasm of the teacher and the degree of warmth with which a given number of pupils interest themselves in their studies; although there is no doubt that a relation of cause and effect here exists.

Digitized by Google

Nor has intellectual brilliancy yet been measured by anything analagous to candle-power. It can only be estimated relatively in terms of more and less.

The rank lists of school and college purport to do this with a fineness of discrimination really unattainable, and therefore unjustifiable. All that can be said safely is that the brighter intellects are registered in the upper and the duller ones in the lower part of the lists.

Merit lists have lately come into use in some of our largest cities for the purpose of determining priority of appointment among candidates for teachers' places, especiallly where the number of candidates is much greater than the number of places to be filled. This condition arises where a city normal school annually graduates many more teachers than can possibly be employed in the schools of the city within the twelve months following their graduation. The accumulation of unemployed normal graduates thus caused constitutes a serious menace to the integrity of school administration. It produces all sorts of personal and political solicitation and pressure. It embarrasses the appointing powers so much that they have been obliged to resort to merit lists for protection against suspicions and charges of favoritism.

Nobody claims that the teacher standing at 87½ per cent on the merit list is any better than the teacher standing at 87 per cent; but every right thinking person will admit that it is better to have priority of appointment determined by such relative standing than it would be to have it determined by political pull or personal influence.

The schools of our cities and large towns will never be clear of politics until there can be made a thoroughgoing application of the principles of the civil service reform to the teaching service. That is the school reform most needed to-day almost everywhere—a reform in the methods of school administration in so far as these pertain to the selection, appointment, promotion, and retention of teachers.

But to return to our main line of thought. Notwithstanding the inexactness with which our estimates of teaching power or efficiency must be expressed, it is necessary that we make such estimates both in our own case and in that of others, for this thing called efficiency is the very commodity which we are all buying or selling in the educational market.

Commercially speaking, we can easily feel the difference between a degree of efficiency worth $1,000 a year and a degree worth $3,000; but the difference between $500 and $550 worth of the same commodity is not so palpable.

So, in a rough approximate way we do estimate, for purposes of employment, the value of teachers' services; and the chief factor in such estimates is or ought to be efficiency. It is therefore worth while to note some leading elements of personal character and attainment which indicate efficiency.

First in practical importance is the power of control. It is the power of holding the attention of numbers of persons through given periods of time for the purpose of instruction. It secures obedience, good order, and industry through interest in the business of the school. It is the attribute of a commanding personality in the teacher—easily recognizable when present and when absent leaving the would-be teacher in a sorry plight.

This power of control is a native inborn faculty bestowed on men in different degrees, and on some not at all. No one can tell whether he has it or not until he has tried.

Doubtless, this natural faculty, when present, can be strengthened and improved by exercise; it can be guided by better and better judgment with more and more experience; but the utter lack of it can not be made good by any array of other estimable traits of character. Lack of control is fatal to efficiency. There are many most excellent men and women who can not keep school. They were not born for it. Some have tried it and discovered their lack. It is fortunate when this discovery is made early in life.

Digitized by Google

Many years ago there was a young graduate of Harvard College who decided to take up teaching for his vocation. He belonged to a family distinguished for intellectual ability and moral worth, and he was himself possessed of much force of character. One who knew him in later life would have said he must have had a commanding personal presence in the schoolroom. But his early attempts at teaching were sad failures. No effort in his power could gain him control of a room full of boys in the Latin school. He soon resigned in bitter disappointment and went to the college president for advice. "Enter the law school," said the president, "for that is the best place for a young man who does not yet know what profession to take up." This wise advice was followed, but the young man was not to become a lawyer. His true vocation—or calling—came to him presently in the voice of an inspired preacher of the Gospel. He left the law school for a divinity school, and in the fullness of time became one of the most renowned preachers in America. For him his early failure in teaching was a most fortunate experience, or, if you will, it was Providential.

Instances like this may show the disappointed young man or woman that failure in teaching is not necessarily failure in life. It is fortunate when the failure in teaching comes so early and is so decisive that the person is left in no doubt as to the wisdom of choosing some other occupation.

The unfortunate and troublesome cases arise, not from an utter lack of the power of control, but from the possession of only just enough of it to escape decisive failure.

There are assistant teachers whose feeble power of control must needs be reinforced by the authority of the principal or by the help of the other teachers. They are in continual need of such support and are apt to complain if they do not get it. Such assistant teachers, who do not assist but require to be assisted, are a drawback on the efficiency of the school as a whole, and they ought not to be retained long in their places.

Unhappily, however, in cities or towns where permanency of tenure is established by law or custom, such teachers are apt to be carried along from year to year to the slow but sure detriment of the schools. Their places ought to be taken by more efficient teachers; but the difficulties in the way of making the necessary changes, as experienced superintendents too well know, are often quite insurmountable.

The question may here be asked whether these remarks apply to the case of beginners. For certainly the beginner is not infrequently deficient in the power of control, and for a time may justly expect the support of the principal and other teachers. Now if such support can save the young teacher from lasting failure, it should unquestionably be given. Especially effective can such support be made where the difficulty arises not so much from a deficiency in the native power of control as from bad judgment in the use of what power there is. In such cases the support of more experienced teachers will best take the form of kindly criticism, advice, and suggestion.

Apparently every large city school system must be worked under the ever present necessity of training an adequate number of beginners each year to keep the teaching force fully recruited. These beginners are mostly daughters of the citizens; and it is well that this should be so. Hence it is a wise policy to provide that young teachers shall not be discarded immediately upon the failure of their first attempts at teaching, but shall be permitted to repeat their trials under changed conditions and expert advice until it becomes clear whether or not they possess power of control enough to reach ultimate success.

But it is surely not a wise policy to continue such trials too long. No duties of the principal and of the superintendent are more important than these: (1) to support and advise young teachers in their early efforts to govern their classes so long as there is a fair prospect of success, but (2) to procure their discharge when a reasonable probation has resulted in failure. This last duty is also disagreeable, for it goes against one's sympathies as well as against the wishes of the failing teacher's

Digitized by Google

friends. But the schools can not reach high excellence if too much indulgence is granted to beginners of doubtful ability.

The mere fact that a teacher has control of his pupils, taken by itself alone, is not enough to decide the whole question of efficiency. Control argues efficiency, it is true, but it throws no light on the kind of efficiency that may be at work in particular cases. For such light we must examine and estimate the motives which have led the pupils to submit to such control as exists.

It may be a control due to fear of the birch or to hope of sugar plums. Better this than no control at all; but the motives thus brought into play have not a high ethical value.

The best kind of efficiency is displayed by the teacher who skillfully plays upon the whole range of children's higher motives, and so produces harmonies of action which the inefficient teacher, harping unskillfully upon one or two of the lower motives, can never evoke.

The psychology of motives is the most interesting and profitable study in which a teacher can engage, and proficiency therein certainly adds to his teaching power.

The popularity of a teacher is often held to be a measure of his efficiency, especially by those who can form only inexpert judgments. Popularity is such a dominant factor in politics that the force of it is apt to be felt in the educational field. And it may be admitted that a teacher popular with his pupils is usually so because he is possessed of amiable characteristics, and that such a teacher can do more and better with his pupils than can an unpopular teacher.

But popularity as a measure of efficiency should be used with careful discrimination. There is a superficial popularity of the kind sometimes tested by voting contests carried on by the newspapers, and there is an unwholesome popularity which is sometimes obtained by weak concessions to the whims of pupils, or by compliance with their desire to escape work, or by some form or other of coddling. Such kinds of popularity do not argue efficiency.

Perhaps the most commonly used measure of a teacher's efficiency is the result obtained by examination of the teacher's pupils. On the value and effect of examinations made for this purpose a few summary remarks are all that our time allows.

In the first place, the teacher himself may be the examiner. By being the examiner he can learn something of the merits and defects of his own methods of teaching—that is, can measure his own efficiency. All good teachers turn examiners from time to time in order to test their own work and incidentally to discover defects in their teaching. These they will remedy without necessarily disclosing them to another person. Next, the principal of the school may be the examiner. His purpose may not be to test the efficiency of each individual teacher so much as to determine the fitness of the several classes for promotion or to regulate the course of work in each teacher's room according to the plan prescribed in the course of study.

Incidentally, however, these examinations may disclose various degrees of efficiency or inefficiency in the assistant teachers. But such disclosures are always open to the suggestion that the questions of the examiner have not been suited to the instruction of the teacher. Unless a principal be very careful in adapting his examinations to the instruction actually given, he will find his better teachers complaining of being hampered.

Going a long step farther away from the teacher, we find the examiner to be the superintendent of schools. His examinations should be and are usually of the regulative[a] kind, although the results of them may be used in the promotion of pupils. But in a large system of schools the superintendent can not possibly attend to the details of promotion, nor can he hope to prepare a paper of examination questions

[a] By regulative examinations are meant such as are intended to guide or regulate the efforts of teachers in carrying out the course of study. They are intended to give the teachers impressive suggestions but not to bring them to the bar of judgment.

Digitized by Google

which shall be well suited to the actual instruction given by any large number of individual teachers. He is, therefore, not entitled to judge of the relative efficiency of the teachers by the results of any general examination he can prepare. Gross inefficiency he can discover in this way, but not the slightly differing grades of efficiency. All discoveries of this kind are made in a far better way, namely, by personal visitation in the rooms of the several teachers. Superintendents' general examinations, if used at all, should be limited to their one justifiable function—that of regulating the work of teachers under a general plan or course of study, so that the best educational results may be got from the operation of the school system as a whole. They should not be used for the purpose of rating the efficiency of individual teachers. Any superintendent who so uses them will soon find his best teachers remonstrating on good grounds.

Still farther away from the teacher are examinations held outside the school system altogether. Such, for example, are the examinations for admission to college.

It is not unusual to find teachers of preparatory schools counting the number of passes and of failures among their pupils in the college examinations for the purpose of estimating their own teaching power. This is a perfectly natural and right thing to do under the circumstances; but it is a mistake to make success of pupils in passing college entrance examinations the sole criterion of the teacher's efficiency. A far better criterion is found in the success with which these same pupils pursue their college studies after admission. An intelligent mother living in Boston had two sons in a certain preparatory school. She complained one day to a friend that her boys had no time to give to some matters not included in the course of instruction in the school and which she thought necessary for the boys' education. "My dear madam," said her friend, "you must not suppose they are educating your sons at that school; they are only preparing them to pass the examinations for admission to Harvard College."

The best teachers and the best schools hope to do something more and better with their pupils than merely to fit them to pass the entrance examinations. For this reason the examination method of admission to college has to some extent been superseded by another known as the certificate method. Under this latter method the college authorities no longer judge of the preparatory teacher's efficiency by reading the entrance examination papers of his pupils, but by visiting his school to see him teach and by watching the progress of his pupils after their admission to college. The certificate method places greater responsibility upon the teachers and especially upon the head of the preparatory school, and the effect of this is undoubtedly to enhance the efficiency of the teaching.

Time fails us for a full notice of many interesting characteristics which make for a teacher's efficiency. We must pass over such matters as his scholarship, his joy in learning, and equal joy in teaching, his knowledge of the principles and methods of education, his moral earnestness, his justice, his clemency, his firmness clothed in gentleness, his courtesy, his sympathy with the young and familiarity with their thoughts and ways, e. g., interest in their athletic sports, and last but not least his physical health. All these are inviting topics, but the final word shall be reserved for the crowning one of all, the distinguishing characteristic of all great teachers, the power of inspiration. This power of inspiration is the highest power; it transfuses and vitalizes all other powers; it kindles in pupils intellectual enthusiasm, moral enthusiasm, or both; it leads pupils to lay part hold on the higher purposes of education; and so it is the power whereby the teacher makes permanent impression on his pupil's characters.

It is power of inspiration that has made Thomas Arnold of Rugby remembered, and Louis Agassiz of Cambridge, and Mark Hopkins of Williams College, and Francis Wayland of Brown University. Your memories will readily extend the list.

Digitized by Google

It is this power of inspiration that has distinguished in greater or less degree all good teachers. In looking back over the course of our lives we all can remember some teacher who first awakened our interest in some department of knowledge or set our heart upon some worthy purpose, and so influenced the subsequent course of our lives. This is our conscious recognition of our teacher's power of inspiration. What this same power may have wrought in us unconsciously to ourselves we can not directly know. That this effect may have been great we are prepared to admit by what we observe in others. Do we not sometimes recognize the past pupils of a great teacher by a certain stamp they wear in mind or character which came from him?

All teachers should earnestly desire to possess the power of inspiration and to possess it abundantly. For by this power, chiefly, is measured their efficiency; and by this power is determined the ultimate value of their work. As already said all good teachers possess this power in greater or less degree. It is this that makes them good teachers. All good teachers seek to increase this power by keeping their minds ever open to the sources of inspiration. All good teachers know that work without inspiration is drudgery, profitless alike to teacher and pupil. Loss of inspiration means failure in the higher purposes of education.

If there were to be revealed to the oncoming host of young teachers in the land, as there is said to have been revealed to the Roman army under the first Christian emperor, a sign from heaven by which to conquer—"in hoc signo vinces"—we might well expect that the sign would be this one word—"inspiration." Let inspiration, then, be the word inscribed on our banner and taken into our hearts.

THE COLLEGE WOMAN.

[From an address to the graduates of Trinity College, Washington, D. C., June 2, 1904, by the Very Rev. Edward A. Pace, Ph. D., professor of philosophy at the Catholic University.]

The ideal of the college woman, as we understand it, is threefold. In the first place, the college woman is one who has received much, she is one who during her collegiate experience has come to know the greatest minds of the past, who has dwelt with the thoughts and the deeds and the aims of the greatest minds of antiquity; she is one who, perhaps, may not know by direct experience the world for which she is preparing, but she is one who has learned of a greater world, the world from which we draw our culture, our refinement, our civilization, and our religion, and because during these four years the college woman has been associated spiritually with the great minds of that past, she looks out upon the world of the present from a higher point of view, from a point of view that is more spiritual, that is deeper, and in a certain sense is more filled with the practical ideas of solid wisdom.

The college woman moreover is one who has kept much, one who in dealing with the treasures of the past has not merely handled them and set them aside, but who has stored up in her own mind wisdom, and in her own heart strength, so that there within her being there is created a sanctuary to which in her thoughts she may retire, she may withdraw from the clamor and distractions and disturbance of the world and find within herself the source of her strength. The college woman who has been really educated along the right lines does not go beyond herself, beyond the sphere of her own activities to find her pleasures, to find her consolations, to find her strength—for education, if it means anything, means that there has been created within the mind the source of genuine pleasure, of best consolation, and of greatest strength.

The college woman is one who has not only received much and kept much, but one who is able to give and who gives much. It is a false idea to think that the woman educated in college is one who has learned to live among books alone, is one

Digitized by Google

who treasures her culture, her refinement, for herself alone; but at the proper time and in the proper circumstances, guided by that inner instinct which comes from culture and education, the college woman is able to go forth as through the gates of the sanctuary to dispense upon others the blessings which she herself has received. The college woman, because she is cultured, does not thereby look down upon those who have not had the same advantages; on the contrary, culture means a broadening out of her sympathies, she is ready to enter into every good work and help those who strive to uplift others; consequently wherever we find a genuine college woman we find that she is the medium, the channel of communication, between all the culture, all the spiritual inheritance of the race, and the entire race as it exists at present.

Now, if that be, in a general way, the idea of the college woman, what shall we say of the college woman in our country? Are there not here conditions which define in a special way the sphere and the work of the educated woman? We have only to glance back, I will not say over our political history, but over our educational history, to see that by the very growth of our institutions there has been prepared a special task for those who receive collegiate education, and why? Because in this country, by the very fact that there is a larger liberty, by the very fact that it is a democracy, there is greater call for that restraint, that self-control, that balance of thought and of action, which is implied in college education, and because in our democratic country women have a larger opportunity than in any other country to exercise those powers which are peculiarly their own. It is true with this democratic spirit America has progressed as no other country has during the last two or three centuries. We were accustomed to say, and educators even up to the last few years have been accustomed to regard that in the American life there were too many tendencies of a material sort, that progress for us meant simply advance in wealth and in the development of material resources; but to-day it is fairly recognized that alongside of this material progress, nay, more, that by dint of this material progress there is also progress of a higher kind. The intellectual progress of this country is much more conspicuous to-day than it was a hundred years ago, and hence the woman who is to take part in the national life must be a woman prepared to recognize what is good in American life, and at the same time to distinguish it from any tendencies that might make for evil.

OLD AND NEW METHODS OF TEACHING.

[From an address on General Methodology by (Doctor) Miss Ernestina A. Lopez, directress of the Sarmiento school at Buenos Aires, delivered before the General Conference of Teachers, held at Buenos Aires, March 26, 1904. The proceedings on that occasion were opened by singing the Argentine and United States national hymns.]

Gustave Le Bon, referring to the investigation recently carried out in France for the purpose of learning the opinion of the most influential persons in teaching matters concerning reforms suitable to be introduced into the school programmes, says as follows: "But if all those who have conducted the investigation have agreed to demand the change of programmes, not a single one has been found who had dreamt of asking for any change in the methods employed in the teaching of those very programmes. This matter might seem to be of essential importance, yet it has not been treated of by the professors who have given testimony before the commission. All have a living faith in the virtue of the programmes, but do not believe in the power of new methods; for as some of them have been educated themselves by the exclusive use of some of these methods they do not understand that others may exist." And further on he adds: "What has most claimed my attention in the reading of the six volumes of l'enquête is the total ignorance in which so many eminent men seem to be of the fundamental psychological principles upon which

Digitized by Google

the instruction and the education of the people should rest. It certainly is not because they lack a directive idea on that point; they have one which is so universally admitted that in their eyes it is useless to discuss it. That directive idea, the classical basis of our university teaching, is the following: Knowledge must first be fixed in the mind by means of the memory. It is thus only by addressing oneself to the memory of the child can he be instructed and educated; hence the importance of good programmes, for these are the parents of good manuals. This constitutes what may be called the most abominable of university errors. Through the perpetuation of this error among the Latin peoples arises the incontrovertible inferiority of the education."

If in France, the land of the great Montaigne, who four centuries ago demanded a well-formed rather than a well-filled brain; if in France, the cradle of the Cartesian doctrine, the land where the Emile was born, and where Diderot taught his disciples in those beautiful words: "Always remember that the spirit is not a machine;" if in France, I repeat, a Frenchman has been able to direct such a serious attack on the teaching imparted in their schools and write a work to demonstrate the necessity of a radical change in the methods of instruction, this surely means that practice has not always advanced in harmony with theory, and this may be explained by the principle that the social masses remain always at least half a century behind the position occupied by a group of select spirits, or perhaps by a single individual who proclaims the most absolute truths, surrounded by the general indifference of the multitude, yet unprepared to understand him. This means that while the arduous problem of method may have been resolved by a few thinkers their conclusions have not yet penetrated the public mind with the force of self-evident and accepted truth.

Due to a phenomenon of a racial order, the countries of the world have retained distinct ideals and distinct tendencies in the training of their youth, and these differences show at a glance what are their ideals of a social and political order. But even in the same country it is not difficult to find a complete schism which divides men, whose support is worthy of consideration, into two distinct bands. That which produces the schism is the antagonistic struggle between the spirit which clings to the past with an obstinacy full of affection and of conviction, and the eminently modern spirit which, only taking into account the weighty economical problem which is arising on all sides, rejects with decision a return to the past, and with closed eyes hurls itself into the stream of practical methods and issues. Hence has arisen the division between the classicists and the modernizers, who in some countries, as in France, wage a decided battle on the field of secondary instruction. I have desired not to omit the mention of this fact, for although it does not directly affect our theme, it serves to explain another which does affect us very closely, that is, the subject of the methods advocated in turn by each of the parties as good. Classical teaching in itself does not deserve any just reproach; on the contrary, as Feuillée says, it realizes one of the most important purposes of all study, which is, to impart to the spirit a complete disinterestedness, enabling it to face scientific problems, not from the point of view of some immediate application, which is the point of personal interest, but rather from the standpoint of national and historic interests. That which really deserves to be criticised, and criticised harshly, is the method which might be called the classical method, because it is that which ruled the teaching of the Middle Ages, and which, by a phenomenon of inertia easily explained, still continues in some degree. I refer to mnemotechny, if not in its absolute form (for happily those times are past in which a law decreed that the scholars should repeat every Saturday all that they had learned during the week, or in which it was mentioned as worthy of eulogy that the school board had forbidden that any other than short lessons should be taught on the memory system), at least to that modified mnemotechny which, under the form of rationalism and reflection, tended to base all teaching on the accumulation of recollections opportunely revived. "All our

Digitized by Google

present methods," says Payot, "are, in a certain sense, only the prolongation of the methods of teaching of the Middle Ages. During that period all teaching was in the hands of Catholicism; the professor ascended the platform and taught the children before him what he had to teach them, and the children had to accept the word of the master as a sacred utterance."

And it is not only in France that the application of the method has not been always as scientific as it should have been. Should anyone doubt this, let him remember what William II said in 1890, when addressing the committee on school reform: "Education fails in many details. The principal cause is that since 1870 philologers have taken possession of the gymnasium as beati possidentes and have devoted themselves chiefly to the subject-matter of instruction, to learning and knowing, but not to form character and to qualify for the struggle against the necessities of the present life. Their starting point has been that the scholar should know as much as possible of everything; and whether it be of any application or not to the practical affairs of life is quite a secondary question."

In the volume, "Instructions, Programmes, and Rules," published in 1890, M. Bourgeois, minister of public instruction in France, urges upon all teachers the need of contributing on their part to the development of that science which only exists at present in a fragmentary form, the psychology of the child, as the only means of constituting methodological science upon permanent and lasting foundations. And in reality, the vacillations and errors in the application of methods of teaching can not arise from anything else than from the imperfect knowledge of those laws which govern the infant mind. The mind in infancy obeys, on the one hand, certain principles which rule the human understanding throughout the entire life, and on the other hand, certain particular laws which regulate the mind only during the early years of life. Hence the necessity of knowing both phases of the human spirit, or in other words, the necessity of knowing the peculiar mode of being of the infantile mind, and the processes followed by the faculties through the entire life for the elaboration of knowledge.

"In order to study an art scientifically," says Bain, "it is necessary to first apply the principles contributed by the various sciences which are related to it, in the same way that we apply, for instance, the laws of chemistry to agriculture; and then to observe extreme rigor and precision in enunciating, deducing, and demonstrating the maxims or rules which constitute the art." In agreement with this opinion of the eminent English psychologist it is necessary, therefore, in order to study scientifically the art of teaching, to discover first the connections of that art with the science to which it is related, and no one can believe that that science can be other than that which studies the nature of the mind and the laws which control its operations. It is a matter of absolute necessity that the workings of the acquisitive faculties should be known by the one who would discover the methods to be followed in their development.

The human brain, by reason of the plasticity of its cellular organization, is constituted to perform a function not granted to any other organ, which is, to provide, in the acquisition of knowledge, for recalling it at the opportune moment, and for its progressive linking together. This is a fact which has been known for some time, but the knowledge of the circumstances which help or hinder the threefold fundamental work of that nervous center is comparatively modern. That which gives value to the ideas acquired is the remembrance of them, which does not mean that all must be at once present to the mind under pain of questioning our knowledge. If any induction be forgotten it is possible to remake it, provided the individual is able to reconstruct all the work done on the former occasion. Recollection has, therefore, no great value for the mind, except in so far as by its means a long elaboration is avoided which otherwise would imply time and an expenditure of strength. From an erroneous conception of the true place belonging to memory in instruction

Digitized by Google

has arisen the mnemonic method. The question consists, therefore, in inquiring—as the importance of memory cannot be disputed—what means will serve to preserve the possession of knowledge without imposing upon the brain a hateful and enervating work. By means of observation and experimentation, modern psychology has succeeded in establishing, as far as possible, certain general principles which may be considered true. According to these principles it is possible, by reducing mental work, to obtain the same results, with this advantage over the mnemonic method—that without depressing or wearying the faculties, but rather stimulating them by means of moderate and natural work, harmonious action and a constantly increasing progress is secured to them. The observations to which I have referred have been directed especially to the investigation of the particular forms in which perception, which is the basis of knowledge, may influence in the easier and better acquisition of that knowledge. It is for present science undeniable that the faculty of discerning or perceiving the changes in nature is in direct relation with the greater or lesser degree of acquisitive power, so that it may be said that the individual who possesses the finest or the best developed perceptive faculties is also the most apt to learn. But, on the other hand, according to the particular way in which objects make an impression upon the senses depends to a great extent whether that impression shall be transformed more or less easily into knowledge capable of continuing through a lapse of time. It has been observed that on certain occasions things are remembered when only one impression has been received from them, while in other cases an incalculable repetition of impressions is necessary. The circumstances which favor retentivity depend on the one hand upon the force of the impression itself, or upon the suddenness or unexpectedness of its production. The recollections of infancy which are related to great events are not easily effaced, and on the other hand they obey principles of relationship which establish between them an intimate connection.

The resemblances or differences noticed between two objects facilitate the recollection of each object, and this to such a degree that when the recollection of one is evoked that of the other naturally arises. "Sometimes," says Taine, "it seems to us that a certain idea has awakened within us unawares or by chance. We do not see in what way it is related to any other preceding idea, but it is often that the idea which seems to be its precedent is not such in reality; between the two there exist intermediaries which habit, inattention, or the rapidity of the operation has prevented us observing. These intermediaries have served as means of invisible transition, which apply the law of contiguity or of similarity. Hobbes, who is the first to expound this theory, relates that in the midst of a conversation on the civil war of England some one suddenly asked what was the value of Roman money under Tiberius—an abrupt question, and apparently in no way connected with the conversation which had preceded it. There did exist, however, a connection, and a moment's reflection suffices to discover the link. The civil war in England dethrones Charles the First; Charles the First is delivered by the Scotch for the sum of £200,000. Jesus Christ was also delivered for 30 coins under Tiberius. Such were the links of the internal chain which had led the questioner up to his eccentric idea."

At other times it is the mere fact of succession that creates associations. In thinking on any event whatever, immediately there occur to us a whole group of actions, which, when well observed, are seen to be merely those which preceded or followed the main fact which occupies our thought. At other times it is contiguity which aids memory. In recalling a person we can not avoid the appearance, in memory, of the place where we saw him, or at least we remember the salient features of the place. It is also a general law that an object which has been observed with pleasure remains more clearly present to the mind than another which has been regarded with indifference or hatred. Any moderate and agreeable form of activity, any work which is done with pleasure, draws to itself all the mental forces and concentrates them, and therefore tends to produce a lasting impression. On the other

Digitized by Google

hand, suffering causes one to reject work, or to perform it in a listless, weak fashion, and hence the impression loses in intensity and the retention of knowledge in duration. Bain observes that suffering always implies a loss of force, while labor requires the total sum of all the forces.

From an appreciation of differences and resemblances is born the power of the mind to generalize. By taking the common character of a group of objects which seem to be distinct from each other it raises itself to the consideration of an abstract whole. The more facility one has in appreciating resemblances and differences so much the more sure and rapid will be his judgment and his reasoning. The same may be said concerning the combining faculty of the mind. In order to create something which shall be neither monstrous nor chimerical it is necessary to have some elements to combine. Creation is never absolute, for even the most original artist can only create on the condition of working with old elements. Herein lies precisely the grandeur of genius, which stamps with its own personal seal that which in reality is not its own, but is the common property of all. In order that the imagination may work with brilliancy it is not sufficient to retain many recollections. It is necessary that these be conveniently placed by a wise distribution. It is necessary that there should exist between them the logical connection which facilitates their resuscitation. Without these requisites it may perhaps be possible to create, but only at the cost of lengthened attempts and many discouragements.

Bearing in mind all these principles which regulate mental work, methodology has endeavored to find the means of making this work easier and more fruitful.

Since impressions and the sudden passage from one to another favor knowledge, nothing could be more logical than to organize teaching in such a way as to avoid monotony and to cause such impressions to succeed each other, endeavoring always to find, whatever might be the point discussed, the most proper phase to produce an intense emotional effect—and this is always possible when moral sciences are treated of—or a surprise, which is easy to obtain in the study of physical sciences. The principle of association founded upon resemblances and differences has come to constitute an element of great value in the transmission of scientific knowledge, for it always allows an economy of time and force. Indeed, on undertaking the study of any subject whatever it is easy to see that that topic is related to many others already learned and to which it seems to draw near by one or other particular feature. As soon as the mind is able to see, even if dimly, a resemblance, the work to be accomplished appears at once to be easier. This, which is always evident concerning the man, is much more so concerning the child. If the teacher has the ability to lead the child to eliminate by some rapid process all the resemblances between the subject which he has to study and those already studied, the lesson will be considerably reduced and will confine itself to the study of the differences, which are really the new elements for the mind. In the same way the comparison of the particular features of the facts under study with those of others already studied will notably reduce labor and with great profit for the exercise of the highest faculties; and here may be admitted all that which relates to contrasts, the appreciation of which contributes so much to strengthen knowledge.

The application of this method has the advantage of allowing the child to accomplish by himself a great part of the work to be done. This alone would suffice to proclaim the method an excellent one.

The principles of sequence and of contiguity are most powerful auxiliaries of teaching, for, resting on those principles, it is able to tend to the rational placing of facts; hence the value of illustrations in historical narratives and the necessity also of connecting all the lessons upon any one theme or subject; and, lastly, to the observation contributed by psychology, that work when agreeable tends to produce more lasting impressions, pedagogy has responded by proclaiming the attractive method in all its forms. This method is that which Erasmus published when he said that

Digitized by Google

all that would produce tediousness and call for unnatural effort should be proscribed as contrary to any good result. The modern school always endeavors to discover that form of teaching which is most apt to awaken the interest of the child, those expedients which, consulting his physical nature and his mode of feeling, lead him insensibly on to the proposed result; and we all know that there is no work which, once clothed with interest, may not be demanded of the child.

We have now considered in a summary form the fundamental principles of modern pedagogy, principles which are modified from time to time, thanks to the progress of the science on which pedagogy is founded; it is easy to see that the old method is not adjustable to these principles, for, ignoring the natural mode of the working of the mind, it placed before it at the very beginning the abstract and the difficult, the indefinite and the complex, and in place of allowing it to proceed logically in the acquisition of knowledge, forced it into the presence of a body of knowledge already established, into the presence of principles which had been deduced after long labor; in a word, because it placed the mind at the highest point of the mental evolution of a people, if not of humanity, and endeavored by force to compel the mind to follow this evolution and only succeeded in paralyzing and confounding it.

Intellectually considered the child possesses in rudimentary form all those faculties which shine later in the man, although clothed in particular characters, which have not escaped the notice of those who study the genesis of the human understanding. The infantile mind is capricious by nature, its attention is weak and always spontaneous; it follows involuntarily with the eyes that which attracts it by its form, or it does this by imitation because it sees others looking at some object. Its necessity of knowing is manifested by this constant curiosity, which leads it to question everything and which causes it to raise itself unconsciously to the consideration of the causes and the origins of facts. Some one has observed that this same curiosity, which may give so much trouble to the person nearest to the child, has this advantage, that it is easily satisfied, it being sufficient at times to substitute one word for another to produce satisfaction; the only course which the child will not allow is that the horizon of its investigations should be closed in by a round "because it is," against which its dawning logic rebels. Credulity and curiosity stand in inverse ratio the one to the other; in proportion as the child's curiosity increases its faith in the word of another becomes less and frequently it may be seen opposing to the dictates of others the results of its own experience and observation. These characteristics of the mind of the child are accompanied by a great necessity of activity, which makes it unable to fix its attention on one point during any length of time; this same necessity causes it to desire everything, and, if possible, to wish to direct everything. Add to this the vivacity of its creative faculties, its exaggerated susceptibility, the facility with which it acquires and loses its habits and one will have a summary idea of what constitutes that world which is still so little known, that world which is called the soul of the child.

These characteristics of the infantile mind, which are sufficiently proven by daily experience, give rise to the only method which can profitably work out its definite direction and formation. The old classical method can not accommodate itself to its necessities. For notice: Does that method pretend to consult the natural desire of the child to analyze and observe everything? Does it satisfy its necessity of action? Does it furnish its reasoning powers, which struggle to strongly assert themselves, the occasion to exercise their dawning strength? It is easy to answer all these questions.

The constant tendency of the old method is to paralyze attention, endeavoring to transform into a mechanical process that which nature wills should be spontaneous. If it creates habits, these are not those of work voluntarily undertaken by the suggestion of that which attracts, but the painful habits which do not in anywise consider

Digitized by Google

the individual nature; it exploits the credulity of the child and therefore makes its thought servile; and even the development of the imagination and sensibility to which it tends only contributes to disturb and violate the equilibrium of the spirit, which can only be maintained on the condition that a well-organized reasoning habit shall serve to balance and correct all its wanderings and vagaries.

PRACTICAL AND INDUSTRIAL EDUCATION IN THE ARGENTINE REPUBLIC.

[A summary of the principal reforms in the educational system of Argentina advocated in a work entitled "La Enseñanza práctica é industrial en la República Argentina," by Dr. J. B. Zubiaur, member of the National Council of Education of Argentina, formerly inspector of normal schools, and president of the National College of Uruguay.]

In this work the author first calls attention to the practical tendency of modern education, especially in the direction of industrial and agricultural instruction, and compares it with the traditional system of Argentina, quoting the words of Doctor Zeballos, minister of justice and public instruction, as follows: "There is something ostentatious and theatrical in our education; we are lavish with it for the rich, who can pay for educating their children, while we are economical with it among the poor country people, who need it in order to preserve the country from disorders and civil wars." He declares that it is to the scientific and agricultural instruction of the United States that that country owes much of its superiority over others. In consequence of such views as these, bills have been introduced into the Argentine national congress at various times instituting a system of general and university education which should embody the practical features best adapted to the needs and character of the country, including industrial and agricultural education. By suitable schools in which manual training and agriculture should be taught it was expected that the productions of the country would be better utilized and its wealth increased, while the poorer classes would learn habits of sobriety, economy, and labor. This plan of instruction extended from the kindergarten to the university. The constitution (1862) of Argentina empowers the national congress to provide for education, and the present work gives a brief history of the attempts to improve and modernize the national system, principally since 1884. Doctor Zubiaur points out the obstacles in the way of introducing modern industrial instruction which Argentina shares in common with all Latin America which was under Spanish influence, viz, a uniformity in the courses of study leading to the university, and the disesteem in which practical studies, or rather those in which manual labor of any kind is involved, are held compared with liberal studies which lead to the learned professions.. This disposition is not in accord with the needs of the country, and it has been the aim of the various laws from time to time to counteract it as far as education can do so. The memorial presented to the Argentine congress in 1893 by Doctor Balestra, minister of public instruction, is quoted as illustrating the efforts for reform. Doctor Balestra asserts that it is as impossible to make men free as it is to make them wise by simply declaring them to be so. They must be taught to be self-supporting while being of use to one another; to develop independent action and to acquire the aptitude for intelligent labor and initiative, which is the only sound basis upon which individual or collective liberty can rest. The national well-being and progress, which always depend upon the happiness of individuals, do not proceed from decrees, but can only be attained by labor. The constitution of the country, he said, was more like the democratic form of government of the United States than that of any European government. The United States presents the picture of millions of men, having equal rights, actively engaged in establishing

Digitized by Google

themselves upon their national territory, "conquering nature" by labor, taking up land, and overcoming distances by railways, bridges, and steamboats, using the iron from their own mines and wood from their forests by the aid of science applied to industrial work. Thus the North American people had produced a national type unknown in history—"the self-made man." Upon this type is based the greatness, the liberty, the fortune, the happiness, and the democracy of the United States. This type should be kept in mind in forming the future citizens of Argentina. Undoubtedly the difference in origin must be considered between the descendants of the English emigrants who went to North America in the seventeenth century and the descendants of Goths and South American natives, who are warlike and proud in their nature rather than disposed to labor, who inhabit Argentina. Doctor Balestra concluded that it was necessary to create an entire system of technical instruction for Argentina, giving preponderance to institutions of agriculture and the mechanic arts and to trade and business schools.

In consequence of the discussions and the propaganda indicated in the foregoing remarks the Argentine industrial congress adopted the following recommendations, drawn up by Doctor Zubiaur: To affirm the necessity of giving a practical and industrial tendency to all grades of education, and to urge the necessity of establishing industrial schools for giving instruction in the industries of the districts where they are situated, and insist upon the importance of interesting the people in maintaining these schools.

Doctor Zubiaur gives an interesting summary of the history of industrial education in Argentina, in which he says: "The beginning of industrial education in our country is recent. Our discoverer and conqueror, Spain, dominated by the military and monastic spirit, could not give us what she herself did not know, or what she repudiated, neither could our own earlier leaders help us in this direction, who only improved upon the political and social paradoxes of Rousseau." Hence it was that, with the exception of a few isolated efforts, no such institutions as those now called everywhere "industrial" or "agricultural" or "technical" schools, were known in the country until the presidency of Sarmiento (1868), when that ardent advocate of education included industrial instruction in a rudimentary form in his general system of education. Early attempts to introduce the study of the mathematical sciences in Buenos Aires had been discouraged by the Spanish court; but the school of mathematics and nautical studies, which was established in 1799 and had been suppressed by the Spanish Government, was reopened in 1810, and gave excellent results until it was annexed to the young university (in 1821), in which the natural sciences were taught in conjunction with medicine. (The famous botanist Bompland was a professor at the university at that time.) Civil wars and the disturbed political condition of the country interrupted the progress of education until 1862, when President Mitre, as far as he could do so with the limited means at his command, undertook the maintenance of both primary and secondary as well as university instruction. But under President Sarmiento the modern ideas of practical education were ably advocated by the minister of public instruction, Doctor Avellaneda, who pointed out the fact that industries owe their perfection to scientific knowledge and that manual labor must go along with instruction in the sciences; and he illustrated his position by the then recent universal exposition of 1867 in England, where could be seen the results of such combination. Doctor Avellaneda insisted that it was necessary to keep in mind the peculiar needs of Argentina in introducing technical instruction into the country, and accordingly such instruction was inaugurated by creating departments of agriculture in the various "colegios," together with departments of mines, which latter had an ephemeral existence but led to the establishment of a national school of mines, which was reorganized in 1897. The plan of studies of this school as given in this work includes all the subjects necessary

Digitized by Google

to a thorough theoretical and practical knowledge of mining engineering and metallurgy.

Another school which embodies modern ideas is the national industrial school, which includes in its course both mechanical and chemical industries. The published programme includes the Spanish language, calligraphy, French, history and geography, natural science, free-hand drawing, mathematics, lineal drawing and descriptive geometry, machine drawing, chemical technology, physics, chemistry, graphic statics and resistance of materials, mechanics, mineralogy, elements of machines, construction of machines and mechanical technology, electro-technics, heat and its applications, bookkeeping, manual work, and industrial operations. The school grants degrees and its graduates become superintendents of works.

Continuing his account, Señor Zubiaur states that manual training was introduced into Argentina in 1889, and he gives the names of the various colegios where it was adopted. The subjects of instruction included sloyd, marquetry, modeling in pasteboard, bookbinding, and photography. Workshops were provided in which hand work could be properly carried on. The method of teaching sloyd was adopted from the normal school of Näas, Sweden, with some modifications suggested by Argentine requirements. A course in carpentry was inaugurated which included in its theoretical instruction such subjects as elementary geometry, and geometrical drawing, design, and ornament. The aim is to make all the industrial schools partly if not wholly self-supporting by the sale of their products. Doctor Zubiaur is not blind to the danger of overdoing industrial training before there is a sufficient demand in the country for the kind of work taught in the schools. In 1896 manual work was officially introduced into the primary schools of the capital. Extending from the first to the sixth grade, the work, beginning with braiding, weaving, making pasteboard patterns, geometrical figures, etc., extended to woodworking and modeling.

The national council of education has since attempted to introduce this branch of training into the territories, and wisely began their task by establishing workshops in which the teachers themselves could receive the necessary instruction, one great obstacle to the spread of manual training being the want of teachers.

Scientific instruction in agriculture, Doctor Zubiaur remarks, was contemplated in Argentina as early as 1823, when President Rivadiva showed his understanding of the true needs of the country by advocating the establishment of a school of agriculture and a garden of acclimation. A noteworthy provision of the decree he issued was that the government should appoint annually six sons of meritorious workingmen as students in this school. When the country had become quiet after a succession of civil wars a department of agriculture was created, in 1871, with the special object of diffusing a knowledge of all things relating to agriculture throughout the country; but little was effected in this way, principally through want of funds, until this department was converted, in 1899, into the ministry of agriculture, in which was included a division of instruction. Since then a new era has begun, and a number of schools of agriculture have been established in the different provinces, with plantations, vineyards, and the other necessary equipment, in which instruction is given both in theoretical and practical agriculture. Since 1896 six agricultural (agronomy) schools have been established in various parts of the country.

In 1890 programmes for common schools in the province of Buenos Aires were drawn up to include "practical" instruction, by which the pupils were to be taught how to work intelligently (by which is not meant the learning of trades), but not to the exclusion of theoretical knowledge which is essential to a proper understanding of the purpose and scope of manual work, and these programmes were prepared to conform to certain pedagogical principles or "laws" formulated by Dr. Francisco A. Berra, the minister-general of schools, which he called the natural laws of instruc-

Digitized by Google

tion. These are the "law of integrity," according to which human beings ought to learn whatever may be indispensable to realize the development of their private individual energies, their collective energy, and their municipal and political energies; and the "law of concomitance," according to which every subject of study should include a practical side, applied theory, and pure theory. In other words, instruction should consist of such mechanical work as is usually necessary to all classes of people, of technology (applied theory), and of pure theory, i. e., scientific theories of various kinds upon which technology is based. These programmes or "projects of laws" were submitted to the general council of education. In Argentina the constitution provides for a director-general of schools, who is appointed by the president every four years with the consent of the senate; a general council of education consisting of eight persons, who are appointed by the president with the consent of the chamber of deputies, and a school council in each district elected by the people annually; there are also school inspectors. The director-general and the council of education have the general administration of the schools, but each district has its own local government. The general laws were therefore submitted to the general council of education. It is unnecessary to reproduce here the discussion of the proposed laws or the programmes which embodied the pedagogical principles enunciated by Doctor Berra, as they appear to be the same as those with which teachers generally are familiar. Their general purport was to convert the primary schools into schools where practical work is taught. Similar efforts were made to introduce practical instruction into the schools of other provinces.

It is interesting to note that in Argentina, as in other Spanish-American countries, this form of instruction was not always favorably received. It conflicts with aristocratic ideas of propriety. Thus, in speaking of the schools in the province of Corrientes, Doctor Zubiaur remarks that the pupils did not take kindly to obligatory woodwork, while their parents objected still more to see their children doing manual labor, the idea being general among them that such work is degrading to personal dignity, social position, and family pride. Nevertheless, manual work and industrial training made good progress eventually in Corrientes and in the other provinces; the workshops became well equipped, and a large number of useful articles were made and sold. This observation applies not only to schools for boys but to those for girls as well, the latter being instructed in domestic economy and needlework, etc., besides the ordinary studies of primary instruction. These schools, following the French custom, are called "professional" schools.

In a chapter upon private action in the field of practical and industrial education Doctor Zubiaur cites the views of Argentine statesmen, who insist upon the necessity of giving a practical turn to the training of the elementary schools, as is done in the United States and England, making the school an efficient means for turning out useful citizens. For this the State alone is not sufficient. There is need of popular institutions to supplement the work of the schools, and of a social initiative, a public spirit, to give an impulse and direction to it, create a demand for industrial training, and give it some such prestige as it enjoys in progressive countries. For this purpose societies and fraternities have been organized to aid intelligent and poor boys in acquiring an industrial education, which are supported by private means, and in some cases the Government aids in the work. Religious societies, as always, are prominent in charitable work of this kind, and the various orphan asylums and sisterhoods have workshops connected with their schools. A number of charitable individuals, including ladies of means, have also contributed largely to providing instruction in agriculture and the mechanic arts in the schools of the different sisterhoods and religious orders.

In a chapter comparing the condition of industrial or practical education in Latin America and in Australia occurs this passage from an address delivered at the Uni-

Digitized by Google

versity at Lima, Peru, by Dr. Manuel V. Villagran, which further illustrates the difference between the Latin American and the North American civilizations. After remarking that in Peru there is an abundance of orators and writers, but a want of practical men willing to labor, the speaker said of education in Peru: "Our system of education seems to have been deliberately invented for another country and other times. We have an abundance of teachers to instruct us in history, literature, Latin, theology, law, philosophy, and the higher mathematics, but none to teach us to cultivate the soil, to breed cattle, to exploit the forests, or instruct us in navigation and commerce and manufactures. And as customs depend in part upon education, so does the system of education of a country depend upon its customs. Notwithstanding our independence, we still preserve in many respects our colonial habits, among them our ornamental and literary education which the Spanish governors implanted in South America for political reasons. We still prefer an education which adorns the mind to one that promotes national progress, which develops brilliancy instead of forming practical intelligence, which serves to occupy the leisure of the rich, but does not teach the poor to work intelligently." And he then points out that Peru, with its vast and undeveloped resources, needs a change in its form of education, notwithstanding the aversion which is generally felt by Latin Americans for the aggressive, energetic spirit of modern industry.

Doctor Zubiaur, in a chapter upon the practical education of women in Argentina, quotes from a correspondent of a journal the statement of a woman teacher that young women object to practicing cooking in school, their desire being to be young ladies, and they regard such an occupation as degrading. Nevertheless, in the State normal schools and in the primary schools, as already mentioned, practical or "professional" instruction is given, besides domestic economy, and he gives full programmes of manual training and domestic economy for girls, together with an historical review of the subject of the education of women and the methods of teaching employed elsewhere, particularly in Belgium, with a view to their introduction into Argentina. The work of Doctor Zubiaur is essentially a plea for the introduction into his country of the practical features of education which are conspicuous in industrial countries like the United States and England, and it is noticeable that in the summary of the situation in the final chapter it is insisted that the English language ought to be more obligatory than Latin in the schools, as being the language of liberty, industry, and organization.

SIR ISAAC PITMAN AND HIS SERVICES TO PHONOGRAPHY.

[Extracts from "Sir Isaac Pitman, his Life and Labors, told and illustrated by Benn Pitman."]

Isaac Pitman was the third of eleven children born to Samuel and Mariah Pitman, at Trowbridge, Wiltshire. The family consisted of 7 boys and 4 girls. * * *

Isaac [born 1813] in his youth was of a diligent and studious habit. He was of a sensitive nature, inclined to be thoughtful, regarding life and its duties as matters of grave concern. He was impulsive only in rendering services to others. His elder brother, Jacob, in speaking of their youthful days, said: "Isaac never had any of that rollicking nonsense about him peculiar to most of us boys, nor do I remember his ever stopping on his way from school to play, but home directly he went, either to his books or to his work." Isaac received his early training in the grammar school of his native town, and left when he had just passed his thirteenth year, having acquired only the elements of a common, but good English education. * * *

From 13 to 19 Isaac Pitman was a self-instructed student. The bookseller at Trowbridge had a lending library, said to be one of the first established in the country; to this father subscribed, and Isaac greedily availed himself of the privilege it afforded.

While music was his pleasure and enjoyment, good literature had a great attraction for him, and Milton, Addison, Pope, Steele, Johnson, and Cowper were favorites, whose writings were not merely read, but critically studied, and considerable portions of them, both of prose and poetry, were committed to memory. During his clerking days, when he was about 16, he began the study of Taylor's System of Shorthand, a cheap edition of which was published, at 3s. 6d., by Harding, a Birmingham teacher of shorthand. Previous to this the lowest price at which a work on shorthand was published was half a guinea—10s. 6d. Isaac Pitman made use of the art for private memoranda and for making extracts from works he read—thus preserving the extract and partly memorizing the matter till in two years he could write about eighty words a minute.

In reading he frequently met with words, the meaning of which he understood, but never having heard them in conversation, he was doubtful as to their correct pronunciation, and the only recourse was reference to the pronouncing dictionary. This occurred so often that he resolved to read carefully through Walker's Pronouncing Dictionary, and copy out every word whose pronunciation or spelling was unfamiliar to him. When the task was completed, he found that he had a list of about 2,000 words, which he copied with the proper diacritical markings and these he committed to memory, both as to pronunciation and spelling; * * *

The establishment of his private school led to his teaching shorthand to a class of his more advanced boys. My brother probably never thought of teaching the art to the children who attended the public school [of which he had been master], but he no sooner began instructing pupils to whom shorthand might be useful than he gladly availed himself of the opportunity of including it among the regular branches of study. The introduction of the art into the school, and my brother's earnest desire to see shorthand more generally practiced, induced him to prepare a small treatise, explanatory of Taylor's system, which both he and I used, sufficient for self-instruction, and which he thought might be sold at the low price of 3d. When the manuscript was completed, he sent it to Mr. Samuel Bagster, asking if he could arrange for its London publication. Nothing could more clearly show the respect in which my brother was held by this gentleman, the head of one of the leading and most exclusive publishing houses of London, than his instant and friendly compliance, accompanied by the suggestion that the little work should bear the imprint of their establishment. Mr. Bagster, however, with a publisher's instinct, submitted the manuscript to a professional reporter, who, after examining it, shrewdly wrote: "The system Mr. Pitman has sent is already in the market. If he will compile a new system, I think he will be more likely to succeed in his object to popularize shorthand." Teaching the art to a class of boys had proved an effectual eye-opener to the imperfections and shortcomings of what was then regarded as the best system of shorthand known, and no sooner had Isaac received the practical advice which accompanied the returned manuscript than he resolutely set to work to improve on Taylor. And now came the opportunity to use his knowledge of what were the actual elements of the language, which he had gained by his diligent study of Walker's Dictionary. Previous authors of shorthand said: "Write by sound; drop silent and useless letters." But the Roman alphabet, on which all the old systems were based, did not afford the means of so doing, in that there were many sounds in the language for which no shorthand signs were provided. Isaac's first improvement was to pair the consonants *p b, t d, f v*, etc., representing the pair by like signs, but using a light stroke for the first or whispered sound and a slightly heavier or shaded stroke for the corresponding vocal sound. Signs were also provided for *sh* as in *fish*, *zh* as in *measure*, *th* as in *bathe*, as distinct from *th* in *bath;* also for *ng* in *hang*, as distinct from that in *hinge*, etc., for none of which sounds had signs been provided in previous shorthand schemes. A new, extended, and sequential scheme of vowels took the place of the old and imperfect *a, e, i, o, u*

Digitized by Google

arrangement of the Roman alphabet; that is, the new system did what any consistent alphabet must do—provided signs for all the vowels of the language, as shown in the following table:

·| *ee* as in *meet;*	·| *i* as in *mit;*
·| *a* as in *mate;*	·| *e* as in *met;*
.| *ah* as in *father;*	.| *a* as in *fat;*
¯| *au* as in *naught;*	¯| *o* as in *not;*
–| *o* as in *note;*	–| *u* as in *nut;*
_| *oo* as in *food;*	_| *oo* as in *foot.*

In addition to these simple vowels, signs were provided for the diphthongs; *i*, as in *fight; oi*, as in *boy; ow*, as in *cow;* and *u*, as in *beauty* as distinct from that in *but.* * * *

Isaac Pitman never wore any personal adornments. Extreme Methodistic simplicity of attire was his unvarying rule. Black broadcloth, a swallow-tail coat, with a white cambric neckcloth, was his habit from youth to age. When the Queen conferred upon him the honor of knighthood, he was, probably, the only one of the small group who, on that occasion, knelt before her majesty, to whom gold sleeve buttons, diamond studs, and patent-leather boots did not, though unconsciously, afford a certain moral support, trifles without which each would have felt himself unequal to the knightly ordeal! One of the distinguished group knighted on that occasion is reported to have said afterwards that it was the most trying and uncomfortable few minutes he had ever spent in his life. We can readily believe that Isaac Pitman was the only one to whom it was a season of anything approaching tranquility. To each of the others knighthood was a distinguished and much coveted honor, and, no doubt, regarded wholly as a personal affair, a reward for ability or achievement; and recognition by so august a personage as the Queen of England, accompanied by so imposing a ceremony as laying the sword of State on the shoulder of the average Englishman, was enough to crush out of him the last remaining spark of independent manhood. To my unsophisticated brother the ceremony must have been an agreeable comedy. Of course it was interesting and highly gratifying that the supreme personage of the realm should at length recognize the worth and utility of the child of his brain, whose development had caused him more than half of a century of unremitting thought and labor, but the mere presence of the Queen would not be awe inspiring; the ceremony as such would not be disconcerting, and of itself would be unimportant. It was the recognition of his lifelong cherished idea that was important, and for this he was glad and grateful. It was an event that ought to happen, might happen, or might not; but, as it did, it was a cause for joy, and there was nothing in the event, beyond, perhaps, being a little too formally conducted, that was felt to be anything more than a pleasant thanksgiving ceremony. * * *

PHONOTYPIC EXPERIMENTS.

As early as 1845 or 1846 the returns from the sales of phonographic books must have yielded my brother a sufficient revenue for a frugal living, and for the gradual increase and betterment of the means for carrying on his publishing business. But the income derived from his books was all absorbed by his phonotypic experiments; and how those varied, and how constant were the changes and fancied improvements in the forms of the new letters, is abundantly shown in his weekly Phonetic Journal, from 1844 to 1856. Few persons have other than a faint idea of the thought, labor, and cost of adding new letters to the alphabet, and Isaac Pittman's scheme required at least 17 to complete an alphabet of 40 letters necessary for the correct representation of English. Each letter required steel punches to be cut, and matrices to be made for lower case, capital, and small caps, as well as capitals and lower-case forms for italic letters; script, as well as roman forms would, of course, be ultimately required for the added letters, and all these would be necessary to complete one

Digitized by Google

font, or size of type. I believe my brother's printing office contained, in 1855, five fonts of phonetic types of different sizes, and at the time of his removal from Albion Place (the office I knew before leaving England) to more commodious quarters in Parsonage Lane, in 1855, he speaks of having "to pack up, haul, unpack, and rearrange from 15 to 20 tons of type, printing apparatus, books, and office furniture." To pay for his costly experiments, more abundant means were needed than were furnished by his own income, so he established the phonetic fund, to which all interested in the attempt to secure a rational orthography were invited to contribute. This fund in December, 1852, amounted to nearly $5,000. He also borrowed from confiding friends sums varying from £100 to £200, till, in 1858, he was over £2,000 in debt. Sir Walter C. Trevelyan, who was a liberal and devoted friend for twenty years, was one who never consented to receive interest on his loans. Neither he nor anyone else ever asked for any security for their loans beyond my brother's word.

In 1859 some of the more earnest friends of the phonetic reform, who knew of Isaac's self-sacrifices in carrying on his costly typic experiments, proposed that a public subscription should be raised to aid him in his efforts to perfect the alphabet. Rev. Cyril H. E. Wyche, of London, who took the lead in the matter, wrote to Isaac asking if a money testimonial would be agreeable to him, or in what form their appreciation of his labors would be most acceptable. My brother regarded Mr. Wyche's announcement of the generous intent of the phonographers of that day as "one of those rarely occurring events in life in which we recognize the angel of the Divine Providence as soon as he is at our side." He would, he said, gratefully accept aid, in that it would help toward building a phonetic institute—a suitable home for phonography and phonotypy—and afford the much-needed facilities for carrying on the work to which his life was devoted. * * *

It was thought that £1,000 would be raised, but no great publicity was given to the affair, and the subscription stopped at £350, which was presented to my brother at a meeting held in London, in June, 1862. Accompanying the check for this sum was a fine marble time piece. * * *

In his desire for a suitable phonetic institute, which would give larger and healthier quarters for himself and his 18 workmen, he appealed for help [in 1867, on the expiration of the lease of the Parsonage Lane premises] to the English Phonetic Society, now numbering upwards of four thousand members. After describing the wretched environment of the Parsonage Lane quarters, its insufficient accommodations, its leaky roof, its thin, damp walls, and consequent damage to his books, as well as its general discomforts to his workmen and himself, Isaac Pitman says:

From the year 1837, when phonography was invented, to the year 1843, when I gave up my private day school in order to live for and by the writing and spelling reform, I occupied all my spare time before and after school hours in extending phonography through the post, and by traveling and lecturing during the holidays. In this period I gained nothing by my system of shorthand, but spent all the proceeds of my books in extending their circulation. From 1843 to 1861 I labored at the cause from 6 o'clock in the morning till 10 at night, and literally never took a day's holiday or felt that I wanted one, and I worked on till 1864 without the assistance of a clerk or foreman. During this period my income from the sale of phonetic books, after paying the heavy expenses connected with the perfecting and extension of phonetic printing, did not exceed £80 per annum for the first ten years, £100 for the next five years, and £150 for the next three years. During the first of these periods I was twice assessed for the income tax. I appealed, and proved that my income was under £100. The commissioners appeared surprised that I should carry on an extensive business for the benefit of posterity. From 1861 to the present time my income from phonography has been sufficient for the expenses of my increased family, but not more. If phonographers think that this labor, extending over the best part of a life, has been productive of pleasure and profit to them and to the world at large, they have now an opportunity of placing me in a position to carry on the work of the reading, writing, and spelling reform more effectually. That which is done promptly is generally done well. Let us all labor in the eye of the motto, "The future is greater than the past."

Digitized by Google

He headed the subscription with the £350 presented to him in 1862. Sir Walter C. Trevelyan gave £100, and other smaller sums soon raised the fund to £1,000. After many fruitless attempts to obtain suitable premises, or a site on which to build, he was fortunately enabled, at an extensive sale of property belonging to Earl Manvers, to purchase a substantial stone structure of five stories, including basement, almost in the center of the city, for the comparative low sum of £600. The building was sold as two houses, but it had a central entrance, a spacious hall, and a staircase 12 feet wide, and was originally built and occupied as one house. It took nearly six months of work on the part of masons and carpenters to transform the Kingston Buildings, as they were called, into a phonetic institute. Toward the close of 1874 the removal from the high room of Parsonage Lane had commenced, and a repetition of the packing, hauling, unpacking, and rearranging of 1855 took place, and though the task was more formidable than before, it was gladly undertaken. The interruption to Isaac's correspondence and the temporary delay in issuing the Phonetic Journal resulted in the accumulation of piles of letters till it seemed a little army of clerks would be required to bring up arrears. But the indefatigable worker, single-handed, was equal to the task, and soon things went on smoothly and swimmingly in the new quarters. But other and more perplexing difficulties had to be encountered. At the Parsonage Lane establishment only hand presses were employed. For the new building Isaac Pitman purchased a "Blaten" printing machine, which would print 600 sheets per hour, a great advance upon the hand press, on which a man and a strong boy could print not more than 500 sheets per day. To drive the new press, he placed in the basement of the building a 2-horse vertical tubular engine, but it soon proved insufficient, and was replaced by a 4-horse horizontal engine. Gratefully as my brother appreciated these new facilities, he soon encountered unlooked-for troubles. We quote from the Phonetic Journal of May 8, 1875:

The friends of phonetic spelling who see this journal have sympathized with us in our trials for the past six months, with respect to the labor we have undergone, the great expense we have incurred, and the annoyances to which we have been subjected in our attempt to introduce into the phonetic institute a steam engine and printing machine. These troubles have arisen from two sources: First, the difficulty of getting our machine to work at all, through our having been deceived in the purchase of an engine and boiler that eventually proved not worth the cost of erection; and secondly, after we had a new boiler and engine made, the machine was pronounced "a nuisance" to our neighbors. We removed it to another part of the building, to pacify the neighbor on one side, and then found that its sound could just as well be heard by the neighbor on the other side, who is much more exacting in his demands. Nothing less than a payment of £150 cash, and the engine to be entirely stopped between the hours of 12 noon and 1 p. m. each day, or still more severe terms in our taking off his hands the lease of his house will satisfy him. "These are the only terms which can be entertained," says his solicitor. Of course we do not entertain them, but stopped our machine immediately on receipt of his solicitor's letter, and just as this journal is going to press. The masons have now (May 1) been working two months in laying down the new boiler, removing the machine, and making the necessary alterations in the premises, and will finish their work in another day; and the engineers were employed three weeks after the engine was made; and just as the work is finished we find that all the labor and money is thrown away—for the present. We shall now have to print a journal of 8 pages at a hand press, as formerly, till something shall turn up, either here or in some other premises, so that we can employ steam power, and it will not be voted a legal nuisance.

PHONOGRAPHIC JUBILEE.

The year 1887 completed the fiftieth year of the life of phonography. The inventor still lived, and among the tens of thousands who had been benefited by the use of his system there were many who thought it would be most fitting to celebrate the jubilee of an art whose utility was recognized in every country where the English tongue is spoken. It was, moreover, just three hundred years since Doctor Bright's

Digitized by Google

famous first work on shorthand was published, so it was resolved, March 3, 1886, at a meeting of the council of the Shorthand Society, a body representing the writers of all systems of shorthand, to hold a jubilee in London in recognition of Isaac Pitman's invention of phonography and of his fifty years of labor for its development and dissemination, and that advantage should be taken of the event to call an international gathering of shorthand writers of English and European systems of shorthand to celebrate the tercentenary of the origination of modern shorthand by Dr. Timothy Bright in 1587.

Mr. T. A. Reed and Doctor Westly-Gibson, author of The Bibliography of Shorthand, were appointed chairman and secretary, and these gentlemen took an active lead in making the event the interesting success it proved to be.

The preliminary announcement said:

It is proposed to hold in the autumn of 1887 an international congress of shorthand writers, of all existing systems, and of persons interested in shorthand generally, to celebrate conjointly two events of importance. (1) The jubilee of the introduction of Mr. Isaac Pitman's system of phonography, marking, as it does, an era in the development of shorthand on scientific principles. (2) The tercentenary of modern shorthand, originated by Dr. Timothy Bright about 1587; continued by Peter Bales, 1590; John Willis, 1602; Edmond Willis, 1618; Shelton, 1620; Cartwright, 1642; Rich, 1646; Mason, 1672; Gurney, 1740; Byron, 1767; Mavor, 1780; Taylor, 1786; Lewis, 1812, and many others in past generations, and finally by Mr. Pitman and other English and continental authors of the present day. * * *

The prospectus continued:

Like so many inventions, phonography appeared at the time when it was specially required. The rapid development of the newspaper press created a demand for shorthand work which had never before existed; and a still wider and more general field was open in large commercial and legal offices, where the value of skilled phonographers was gradually recognized to such an extent, indeed, that their employment is regarded as a matter of absolute necessity. Increased facilities were offered to students for reporting lectures and copying extracts, and for friendly, social, and intellectual intercourse, the new medium of communication was hailed with gratitude by thousands. It is needless to add anything as to the position which the system now holds in every English speaking and writing community. Every lover of phonetic spelling will readily recognize the services which Mr. Pitman has rendered in that direction through the medium of his system. In no more effective way could the phonetic principle be applied than in a system of shorthand, daily and hourly used throughout the country. No longer the dream of the philologist or the educationalist, the principle has received practical embodiment and application in phonography, and the attention of the public has thus been aroused to an extent that could hardly have been attained by any other agency, to the defects and inconsistencies of English orthography and the necessity of removing them. It is believed, therefore, that all phonetic reformers will willingly join in some enduring memorial, which it is proposed to make in honor of Mr. Pitman.

A Congress will be held in London, at which papers will be read and discussed dealing with the history, development, and literature of shorthand from Bright's days to Pitman's; also with matters of a more practical nature bearing upon the present and future of shorthand and the prospects of the art generally. In connection with the congress it is proposed to hold an exhibition of shorthand works of every description, including books, written and printed in shorthand, stenographic curiosities, and other objects of interest. There will also be opportunities of social intercourse, and every effort will be made to render the occasion a memorable one in the history of the art. Whatever funds may be collected will, after paying expenses of the celebration, be devoted primarily to some method of recognizing and perpetuating Mr. Pitman's name and services, his own wishes being consulted as to the precise mode of application.

The phonographic jubilee was a gathering of the representatives of shorthand systems from all parts of the world, France and Germany being especially represented. The congress was held at the Geological Museum, Jermyn street, London, by special permission of the lords of the British council. Five days were devoted to topics of general stenographic interest, and one day was specially reserved for the celebration of the jubilee of phonography. Lord Rosebery presided and delivered the inaugural address. He spoke eloquently of the utility and value of shorthand for professional

Digitized by Google

and literary purposes, and of its great importance as a time-saving instrument in the ordinary business affairs of life. He referred to its use in the public Government offices, and that he had, when in office, frequently urged its employment on the score of economy and as a means of securing more efficient service. So essential had shorthand become to the press in business, in judicial, and in Government affairs that if by any autocratic power its employment were to be suspended for a week he could not, by any stretch of imagination, conceive how the world could get along without it. Growing lads, he said, should be reminded that a knowledge of shorthand was indispensable in a mercantile career and to all who aspire to clerical and secretarial posts.

Wednesday was devoted to the phonographic celebration. At the morning conference Isaac Pitman read a paper on "The Spelling Reform, and How to Get It;" in the afternoon he contributed a paper on "The Genesis of Phonography," giving some of the details of the construction and development of phonography. He said he was able to fix the exact date of the publication of Stenographic Soundhand from a letter dated November 14, 1837, written to Mr. Samuel Bagster, the London publisher, which accompanied a consignment of 200 copies of his little book, out of 3,000, of which the edition consisted.

It can not be stated with certainty, but I think this was the entire number of the crude little pamphlet that were ever sent to the eminently respectable London publishing house. The remainder were sold by my brother, or were given to friends and correspondents for their use and for free distribution, for it was not long after its publication before it was seen how vastly the scheme could be improved, phonetically and stenographically, as is shown in the edition of 1840, which was completed in all its essential details early in 1839.

The chief event of the phonographic jubilee was the evening meeting, when the theater was crowded with enthusiastic phonographers from all parts of the country to witness the unveiling and presentation of a marble bust of Isaac Pitman, the work of the distinguished sculptor, Thomas Brock, R. A. The author's long-time friend, Mr. T. A. Reed, was selected to make the presentation. When the cheering subsided, Isaac Pitman said:

Mr. Chairman, and my dear and affectionate friends, there is a passage in the Divine Word that has rested upon my mind for a month or two as one that I could use on the present occasion. It is a divine inquiry submitted to us to institute a kind of self-introspection and self-examination. It runs thus: "Seekest thou great things for thyself?" If we put that question to our own hearts I think there are few of us who can say that we do not. The inquiry is followed by a positive command from the Maker of the Universe, "Seek them not." I have quoted this portion of the Divine Word for the purpose of saying that, consciously, that passage has been my guide from my youth up. To-night, instead of feeling that I am a kind of Roman citizen and that you have placed a civic crown upon my brow, I rather feel in the condition of a criminal arraigned before this court on the charge of having sought great things for myself. I fancy to myself, somehow, that our venerable chairman is the judge. If he were but bewigged, which would well become him, he would be an admirable judge. And my friends upon the front row seem to me to be the jury—the grand jury—and the seats behind, filled with the public, are the audience; and now I stand before you in some sense as a criminal arraigned before the world for having sought great things for myself, and I must, from my heart, declare myself "not guilty." If you, in your clemency, come to the same conclusion I shall go from this meeting a happy man. And then to turn to this bust. A doubt is suggested to my mind somehow, and I can not get rid of it. I have some hesitation in deciding which is the man and which is the image. I must really appeal to Mr. Brock. [Mr. Brock answered with a smile.] I think this [pointing to the bust] must be the man, such as he ought to be for purity and beauty, and this [pointing to himself] the imperfect image. I only wonder how my friend Mr. Brock could have made such an image from such a subject.

After alluding to the necessity for a brief alphabetical system of writing, he said:

My object in life has been to make the presentation of thought as simple of execution and as visible to the eye as possible. Fifty years are a long time in the life of a

Digitized by Google

man, and I have prosecuted my labors for that length of time, and though I can not say that we have got in phonography the best shorthand outlines for every word, I do maintain that we are not very far from it. I think that the only thing that remains to be done is to select any words that are not facile and beautiful in form, easy of execution by the reporter's hand, consider them and put them in the best possible form, and then we shall have completed our work.

After a reference to the spelling reform and its great desirability, he said:

Well, my friends, I accept these beautiful gifts with the deepest and most affectionate gratitude of which my nature is capable; they shall be a stimulus to me to work on in the same line, but, if possible, with increased diligence and faithfulness.

Mr. Pitman was the principal guest at the luncheon given to the members of the congress, at the Mansion House, by the Lord Mayor, Sir Reginald Hanson, who had been instrumental in introducing phonography as a study at the City of London School. In proposing the toast of the "International Shorthand Congress," the Lord Mayor coupled with it several well known names, the foremost being that of Mr. Pitman, with which, he said, he had been familiar from boyhood. It had been a matter of pleasure to him to follow the expressions of sympathy and good feeling from those who had studied his system and had presented him with a testimonial of their esteem.

The proceedings of the jubilee celebration were very fully reported by the London Times and by other metropolitan papers, and more general attention was called to the educational and commercial uses of phonography than by any previous occurrence in the history of the art. The proceedings of the congress were published in London, making a volume of 460 pages, together with an appendix of 48 pages, giving a catalogue of 1,451 volumes of shorthand systems, pamphlets, and periodicals, etc., of the history, use, and extension of the art in English, French, and German.

America's contribution to the jubilee was a handsome gold medal, which was struck to commemorate the event. The address accompanying it expressed the high esteem of American phonographers for the inventive genius that had originated and developed so admirable and useful an art of expressing thought; for phonography was a system of shorthand founded on scientific principles, and unfolded in systematic arrangement and analogic harmony. It was the first in which the simplest signs were employed; the first in which cognate sounds were represented by cognate signs; the first in which those elementary sounds admitting of classification in groups were represented by groups of analogous symbols; the first in which the attempt was made to give circles, hooks, and loops distinct offices for efficient service in the stenographic art. By it the language was for the first time successfully presented in shorthand on a phonetic basis, and one who could read it could hardly fail to know the spoken words.

The address concluded with the sincere wish for "your health, happiness, and prosperity during the remainder of your career on earth, and that your life may be spared as long as existence shall be a pleasure to yourself and add to the happiness of others."

The address was signed, Edward F. Underhill, Eliza B. Burnz, James E. Munson, committee.

Subsequently Isaac Pitman was the recipient of another testimonial, on this occasion from his fellow citizens of Bath. It consisted of a replica of Mr. Brock's jubilee bust, which my brother consented to receive on condition of its being accepted by the Literary Society of Bath. The meeting was held at the Guildhall, under the presidency of the mayor of the city. The presentation was made by Mr. Murch, who said:

As an old inhabitant of Bath, representing the friends whose names are inscribed in this book, and indirectly a much larger number, I beg to offer this bust for your acceptance. We have heard of your kind intentions respecting it. We are glad to know that it will find a congenial home within those walls where we have so often met you. We hope it will be generally thought that the sculptor has shown his

Digitized by Google

accustomed skill and increased his well-known reputation. We believe that to your fellow citizens, to the young especially, it will be a valuable memorial of one who, through a long and useful life, has gained their sincere respect, and set an example of intelligent, benevolent perseverance. May you still be blessed with health and strength for many years to continue that example, to share the well-earned pleasures of old age with those who are near and dear to you, "love, obedience, honor, troops of friends," and to benefit mankind by hastening the time when knowledge shall cover the earth as waters cover the channels of the deep

In acknowledging the testimonial, Mr. Pitman said:

If I were a stoic a neat sentence of thanks might suffice for acknowledging this beautiful gift. But I am not a stoic. I am deeply moved by the kindness of the friends who have subscribed to this testimonial. Whatever of honor there may be in this presentation, I refer it not to myself, but render it to the Lord, to whom all honor belongs. The literary institution has kindly offered to accept the bust and place it in the reading room, and I have much pleasure in asking Mr. Murch, as the representative of the institute, to accept it. I like to think of English literature under the form of a vast temple, with a portico supported by two pillars, on one of which is inscribed the single word "Letters," and on the other "Numbers." The temple is adorned with statues of men, English and American, who have made the literature, the science, and the arts that now illumine, beautify, and bless the world. No one is permitted to pass the portico of this temple who is ignorant of letters and numbers and their combinations. These little marks, "a, b, c," and "1, 2, 3," that seem in themselves to have no more meaning than the marks of bird's feet in the snow, are really the foundation of our civilization. There can be but little trade and commerce, and no literature, without these seemingly insignificant signs. In the use of figures we are consistent, but in the use of letters we are inconsistent. Figures always represent certain quantities or numbers, but letters are used arbitrarily, and long and weary is the task to find out what they mean.

Mr. Pitman spoke at some length of the necessity and importance of the spelling reform, referring particularly to what Max Müller called the "unteachable" character of English orthography and to the pitiful waste of time to which the young were subjected in attempting to master its difficulties and absurdities.

Early in the following year a gold jubilee medal was presented to Isaac Pitman at a public dinner in London, under the presidency of Hon. Viscount Bury.

Fifty years ago [said his lordship] Mr. Pitman found shorthand in a very chaotic condition, and the man who, out of such elements, could evolve a system which was brief, rapid, legible, and easily acquired, and which has so quickly taken the foremost place among shorthand methods, must be a remarkable man. But he has done more than that, for by his indomitable energy he has brought his system to such a position that the little seedling which he planted fifty years ago is now spreading its branches over the civilized world.

In his acknowledgment of the kindly feeling of his phonographic friends, Mr. Pitman said that he was able to announce that phonography had been adapted to the Malagasy language by the Queen's private secretary, who reported the speeches of the house of representatives in Madagascar, and who was holding weekly classes for instruction in shorthand. He also alluded to the adaption of phonography to Spanish and Dutch, and was sanguine enough to avow his belief that the phonographic art would in time be adapted to all languages, founded as it was on principles of universal application. * * *

DR. A. J. ELLIS AND THE PHONOTYPIC ALPHABET.

It was as early as 1843 that my brother made the acquaintance and secured the literary cooperation of Mr., afterwards Dr. A. J. Ellis. Mr. Ellis had given special attention to the analysis of the sounds of language before he ever heard of phonography, but his studies and labors had reference to the possible completion of a printing alphabet for the correct representation of all languages. On learning of the existence of phonography, Mr. Ellis immediately put himself in communication with the author of the system and from the first proved himself one of the ablest and safest of my brother's advisers. He was the foremost of those earnest phonographers by whose suggestions and patient experimenting those great improvements were

Digitized by Google

incorporated into the system that distinguished the ninth from all previous editions, and which, in all essentials, is the American phonography of to-day. In 1845 Mr. Ellis completed his adaptation of phonography to foreign languages, which Isaac Pitman added to his Manual as an appendix, and his scheme continues to be the standard mode of expressing French, German, and other foreign sounds as used by English and American phonographers to-day.

Mr. Ellis's chief interest, however, was centered in my brother's phonotypic experiments, which first assumed a practical shape in the January number of the Phonetic Journal for 1844, in which the first practical examples of phonetically printed English were given, where every printed word presented to the eye an unerring picture of the spoken word.

Mr. Ellis was profoundly impressed with the importance of employing a phonetic alphabet as a desirable, nay, necessary instrument in national education, in that it furnished the only means by which reading, spelling, and writing could become general among the great body of the English people. Toward the close of 1846 my brother secured the pecuniary cooperation of Mr. Ellis. A partnership was entered into by these two phonetic enthusiasts with little, if anything, beyond a verbal understanding, wherein it was agreed that Mr. Ellis was to give his time, ability, and means to the furtherance of the typic department of the reform, while Isaac Pitman was to give his time and energies to phonography, leaving the income which the sale of the instruction books was beginning to yield wholly to my brother.

By the joint efforts of Isaac Pitman, Mr. Ellis, and a host of earnest helpers, a thoroughly practical phonotypic alphabet had by this time been decided upon. The embryo printing establishment of my brother was handed over to Mr. Ellis, who took upon himself to relieve my brother from the heavy drafts to which he had before been subject in experimenting with new types. Fonts of different size phonotypes were now ordered, each new letter requiring five new costly steel punches to be cut for large cap, small cap, and lower case, italic cap, and lower case italic; new presses were obtained, a new printing office was opened, and the bills for all were promptly paid by Mr. Ellis, who now took up his residence in Bath, so that he might give his undivided attention to the details of his philanthropic enterprise.

After events showed that nothing could have given such prominence and dignity to Isaac Pitman's fondly cherished hopes as the countenance and aid of a man of Mr. Ellis's literary and social standing. He was a gentleman of good birth, ample fortune, and university training, and the influence he brought to bear reached outside the phonographic field to which Isaac Pitman's labors had necessarily been confined. While the phonotypic reform was confessedly for the uneducated, to help the ignorant to read, and to save children from the time-wasting perplexities of the ordinary spelling, it was evident that this could be done only by first reaching the intelligent classes, the teachers, the patrons of schools, and the publishers of books, magazines, and newspapers. At that time my brother's phonetic propagandism had scarcely touched the intellectual world. His name was unknown save to the comparatively few who were interested in phonography. Mr. Ellis's aim was to reach the great world outside. He took charge of the Phonetic Journal, established the Phonetic News, a weekly newspaper, and began the publication of elementary readers and school books, and reprinted in phonotypy a number of the English classics.

Experimental classes for instruction in phonetic reading were formed and taught in many of the cities and towns of England and Scotland. Classes of ignorant adults, ignorant but reformed drunkards, classes of prisoners in jails, were taught to read by means of tablet letters and primers in a surprisingly short space of time. Numerous classes of ignorant children in reformatories and charity schools, as well as private classes, were taught to read with precision and tolerable fluency in from two to three months, by one hour's daily instruction. An added interest was created in favor of the new system when it was found that the transition from the phonetic to the

Digitized by Google

Romanic letters was a comparatively easy task. The general resemblance between the old and new styles was so great that the pupil's ability to read the new method enabled it to readily decipher the greater number of words in the common print. It was thus demonstrated that the easiest and speediest way of learning to read Romanic spelling was to begin with the phonetic system.

It was not two years, however, after Mr. Ellis had commenced his disinterested labors that my brother persuaded himself that the phonotypic alphabet ought to be still further improved. He grew impatient with an alphabet that used vowel signs to represent English rather than European analogies. Considering the future universality of the phonetic scheme, he regarded this not merely as a blemish, but an error. With this conviction he proceeded to advocate using the vowel signs *i*, *e*, *a*, with slight modifications in form, to represent their European instead of their usual English values. These and other changes were urged with great persistency; but so ill-timed and radical a change of the 1847 alphabet, which had proved thoroughly practical in teaching, and in accordance with which an imposing number of books had been printed, was generally considered by the friends of the reform as most undesirable and unwise.

Mr. Ellis was grieved and annoyed by my brother's insistence in this matter. Mr. Ellis, I think, wrote to me more freely than to anyone else in the phonetic field, because he knew I was in sympathy with his views; that I was all the time publicly advocating and teaching the 1847 alphabet, used in his publications, and that for theoretical, as well as practical teaching reasons, I was opposed to my brother's changes. But Mr. Ellis showed his thoroughly generous nature by never hinting to me or to anyone else, as far as I ever learned, what I felt was the true state of the case, namely, that my brother's impatient zeal led him to adopt a course at once unwise, ungenerous, and unjust, in that it minified the great sacrifices Mr. Ellis had made for the phonetic reform; it cast a slur upon his labors by the implication that there was a better scheme which he might adopt, but would not, and more than all, it rendered Mr. Ellis's publications obsolete in the proportion in which Isaac Pitman's proposed changes were accepted. * * *

[Mr. Ellis's phonotypic printing office was discontinued in 1849, and during the ensuing three years] the phonotypic reading reform movement was in a most unsettled condition. Teaching by means of phonetic books was greatly hindered by the never-ceasing controversies on really unimportant details. Isaac's proposed changes were not generally accepted, and the alphabet which Mr. Ellis had used was far more generally approved, and what teaching was done in schools was entirely by means of that alphabet. During this period I was in frequent communication with Mr. Ellis, who took as great an interest in the reform as ever. A letter from him, bearing date October 10, 1852, is interesting as giving an inside view of the phonetic system at the time, from his standpoint.

Alexander John Ellis to Benn Pitman.

I was very much surprised to hear you had ventured to do something for phonetic printing, or "Reading for All." I have not been surprised to find you have done but little of late in this respect, for with Isaac's Journal and frequent changes, a great deal of determination is required to bring the subject before an audience. In 1849 you might talk of it as a settled thing—that is, settled so far as learners were concerned. Now it is very difficult to say what it is. The "Changeling" seems its best name, and very like a miserable changeling it looks in the pages of the Journal. Your brother has done his worst for the reform. He does not seem able to discover that he can not possibly get an alphabet in which everyone shall agree, that in fact no one of the present day is likely to concoct an alphabet which shall suit those who have been from the first taught to read phonetics. My little boy, 4½ years old, who knows of no other style of reading but the phonetic, is more capable of telling what is to be done than Isaac, or you or I, who have all manner of Romanic nonsense in our noddles. That the phonetic council will accept his alphabet as a whole, I do not look for it. * * *

BELL'S VISIBLE SPEECH.

A very interesting and original attempt at alphabetic reform was made in England in 1865–1867 by Mr. Alexander Melville Bell, who called his scheme "visible speech." It was an effort to provide a universal alphabet that should be self-interpreting, in that the forms of the letters, it was claimed, would picture their sounds by indicating the position of the organs of speech during their utterance. Attention was called to the scheme by a paper read by the inventor before the Society of Arts, who, after showing the urgent necessity for a more philosophic representation of the language than is provided by the Roman alphabet, and its inconsistent spelling, claimed that a scheme of visual representation of sounds was possible, by symbols that should not be arbitrary, as are the letters of the Roman alphabet, but such as would be pictures of sound, or, at least, visual indicators of the position of the organs of speech in uttering the sounds, and with such exactness that all possible shades of sounds, foreign and dialectic, would be accurately represented. Mr. Bell * * * hoped that the British Government would recognize the importance of his invention, in which case he would give it to the public on condition that the Government defrayed the cost of providing types for the new forms of his alphabet, and circulate his system for the general benefit. * * *

Mr. Bell had given several interesting semipublic exhibitions in London, demonstrating the practicability of his scheme in correctly indicating the sounds of speech, in which he was assisted by his two sons, Edward Charles and Alexander Graham Bell, the latter now the world-wide-known inventor of the Bell telephone. In an editorial notice of Mr. Bell's invention the London Atheneum (July 5, 1865) gives the following account of one of those exhibitions:

We and many others have seen this method tested in the following way: Mr. Bell sends his two sons out of the room and then invites the company to make words in any language, pronounced rightly or wrongly, and sounds of any kind, no matter how absurd or original, for it is the success of this method that whatever the organs of speech can do the new alphabet can record. Mr. Bell tried each sound himself, until the proposer admits that he has got it; he then writes it down. After a score of such attempts had been recorded, the young gentlemen are recalled, and they forthwith read what is presented to them, reproducing to a nicety, amidst general laughter and astonishment, all the queer Babelisms which a grave party of philologists have strained their muscles to invent. The original symbols, when read sound after sound, would make a Christian fancy himself in the Zoological Gardens.

Mr. Ellis was deeply interested in Mr. Bell's scheme, and, after attending some of the exhibitions, publicly recorded his opinion of the scientific accuracy of representation which the new scheme provided. * * *

The hoped-for aid from the Government never came, and Mr. Bell in 1867 published in a beautifully printed and expensive royal octavo volume his scheme of visible speech, dedicating it in loving remembrance to his son Edward Charles, who assisted in the phonetic experiments.

Those who favored phonetic reform, but had never experimented in devising new typic forms, and therefore did not know the difficulty—say, rather, the impossibility—of supplying the deficiency of the Roman alphabet with new symbols that equal the old letters in symmetry and beauty, were grievously disappointed at the appearance of the new forms that Mr. Bell had chosen for the representation of the sounds of speech. He had to invent forty new forms, and those who had helped Isaac Pitman in the invention of seventeen new and unobjectionable letters were not surprised to find that Mr. Bell's scheme stood no possible chance of general recognition, whatever might be its scientific merits. A printed page of the forms used in the visible speech was as distressingly ugly and as unwelcome to the eye as Choctaw would be to the ear of a cultured Italian, and a hundred times more unlikely to be generally accepted by the English-speaking world than Isaac Pitman's phonotypic scheme, in which only seventeen new letters were added to the Roman alphabet.

Digitized by Google

Mr. Bell's analysis of sounds was unquestionably more complete and scientific than any that preceded it, and those who are interested to know what are the sounds of human speech, in all their scientific minuteness of variation, can obtain a good idea by reading or, we would rather say, attempting to read, Dr. A. J. Ellis's article on the "Sounds of Speech" in Volume XXII of the last edition of the Encyclopedia Britannica, page 381. When that most wonderful analysis of speech is intelligently examined the reader will form a tolerably accurate idea of the difficulties to be encountered in devising any strictly scientific scheme for the representation of human speech, difficulties which will remain insurmountable obstacles until the world is more civilized and its ear better cultivated, when probably we shall be gradually rid of many of the unpleasant fricatives, gutturals, aspirates, and nasals, as well as of some close and obscure vowels that now offend the ear when listening to most of the spoken language of the world. * * *

The Bells were a distinguished family of literary elocutionists. The father, Alexander Bell, was a teacher in London, Alex. Melville Bell was a teacher in Edinburgh, and David E. Bell was a teacher in Dublin. After the death of the father Alex. Melville Bell settled in London, and held the position of lecturer on elocution in University College. David E. Bell, the author of an excellent work on elocution, was my teacher. Through him I came to know the father in London, and I formed a high opinion of his literary and elocutionary ability. I remember he told me that he was the first to punctuate Milton's "Paradise Lost." He was employed by the London publisher, who was about to bring out a fine edition of the work, and my recollection is that he said he was paid £5 for his task—the sum paid Milton for writing it.

I retain a vivid remembrance of meeting Mr. Alex. Melville Bell before leaving England. I was much struck with the purity and charm of his speech. It was a revelation to me. His utterance seemed to combine the easy, graceful intonation of the talk of a cultured actress with the strength and resonance that should characterize the speech of a man, and, though finely modulated, it was without a suggestion of affectation, either as to matter or manner. I had never before, and I do not know that I have since, heard English spoken with the ease and delicate precision that so distinctly marked the speech of Mr. Bell.

Professor Bell's clean-cut articulation, his flexibility of voice, and finely modulated utterance of English was but an exemplification of what efficient and long-continued training of the vocal organs will do for human speech, and how charming the result! * * *

HIS LAST ATTEMPT AT IMPROVEMENT.

For nearly thirty years my brother's life was a struggle with poverty and limited means. As long as he continued his costly phonotypic experiments he was kept poor. The income derived from the sale of his phonographic works and a great deal which he borrowed, besides liberal subscriptions from friends of the phonetic reform, went to pay for new phonotypic punches, matrices, types, and for the paper and printing of books for which there was but little sale, and a great portion of which were gratuitously supplied to teachers who were willing to experiment with them. A sum exceeding $100,000 was expended on these phonotypic experiments from 1843 to 1859, exclusive of $40,000 generously invested by Dr. A. J. Ellis. When this outlay ceased, as it did when my brother became convinced that his extended alphabet would not be accepted in his day, and that the first, and indeed the only, typic reform possible, must be a phonetic use of the letters of the Roman alphabet—that is, a gradually amended spelling—then phonography, secured as it was by copyright, began to yield its author an ample revenue. But he continued his untiring labors, and almost for the first time in his active life he allowed his thoughts to be diverted for a time to home affairs. He bought land and built a fitting home for his family in a suburb of Bath. After two or three times enlarging his business

Digitized by Google

premises he took his two sons into partnership, bought land, and an entirely new printing establishment was built, and presses and machinery of the most improved kind were purchased for his now extended business. But wealth to him was without its usual significance. It came unthought of, unsought for, and, as it proved in the end, uncared for. About seven years before his death he was induced, at the solicitation of his wife and his two sons, to make over to them his entire business, buildings, presses, machinery, stock of books, printing material, his weekly Phonetic Journal, and afterwards to his junior partners the copyright of all his works, which secures the exclusive right to publish during the author's life and for seven years after his death. He was allowed an income which was thought sufficient for his limited needs, though after events and his letters show that he was doomed, at an advanced age, to feel again the sting of debt and suffer from the restrictive bitterness of straitened means. * * *

This disposition of my brother's publishing business, copyright, and estate revealed an unhappy and unlooked-for state of affairs, being wholly contrary to his often-expressed intentions and repeated assurances in his letters to me. The unavoidable inference was that my brother had yielded to influences he could not escape. He sought to purchase peace; but it came not. The fruits of the transference of his property and rights were not long in manifesting themselves. Sir Isaac was soon made to feel that he was not desired at the institute, and he therefore consented to work at home, but the sons continued to hand over to him all the correspondence requiring knowledge and thought. Notwithstanding that by the deed of transference he had reserved the right of the general direction of the affairs of the institute, he found that those who handled the funds and paid the wages were the only ones whose orders were obeyed, and Sir Isaac's wishes and orders were henceforth systematically disregarded. The following is one of many instances which might be given: He wished to publish in phonetic print a portion of Mrs. Barbauld's "Evenings at Home," for which Miss Rosie Pitman, my brother Henry's artistic daughter, had made original illustrations. Under date of July 7, 1893, Isaac wrote, "I ordered the foreman at the institute to get the three books made up from 'Evenings at Home' and put to press three weeks ago, and have heard nothing about it since. Neither of my sons cares a fig about the spelling reform, and as the institute is a mile away from me, I can not work at it as I did when I went there every day. * * *"

It was not long after this transference of the usufruct of Isaac Pitman's life's labors, together with the literary and business accumulations of more than half a century, that certain improvements in phonography presented themselves to the inventor's mind as necessary to the completion of the system. Much thought, innumerable experiments, and extensive correspondence with teachers of the art had convinced him that the alteration he had incorporated in the English text-books of 1862, and in accord with which a whole generation of phonographers had been instructed, was a great mistake, and the so-called "improvements" he now sought to introduce were in fact the undoing of the change of 1862, and a return to the system as it previously existed.

The determination of the author to complete his system gave rise to an unlooked-for crisis. Isaac Pitman, it is true, had invented and nearly perfected his system of brief writing; its development had required the unceasing activities of more than sixty years; it had been welcomed as a much-needed art throughout the English-speaking world; it had brought honor and wealth to the inventor, and his unquestioned leadership, it might be supposed, included his right to improve his system in accord with his long and varied experience. But now, when he wished to give the finishing touch to his beloved art and employ the necessary agencies to carry his views into effect, he found himself beset with most untoward obstacles. The elder son antagonized Sir Isaac at every point, and the younger son, wholly under the influence of his elder brother, joined in thwarting his father's cherished wishes.

Digitized by Google

To American phonographers and to the majority of the older and more experienced English writers of the system the changes of 1862 seemed unwise and undesirable, and in America they were not adopted. The attempt of the author now to undo a "not sufficiently considered" change, and to remove what he termed "a blot upon the system," proved the one serious trouble of his life. It shortened and embittered his latter days, and there is probably not to be found in the annals of literature a more pathetic episode than that recited by my brother of his ineffectual attempts to remedy a former mistake, which he now believed would restore his system to an ideal completeness and make it coincide with what had been found so admirable and satisfactory to American phonographers.

The author's two sons determinedly opposed their father's views. The proposed changes could not be introduced into the publishing system without being first submitted to the phonographic world. This, it was thought, would give rise to endless discussion, and the introduction of the changes into the text-books and other publications would be attended with considerable trouble and expense. These were considerations of less than a feather's weight to the inventor when set against an admitted improvement of the system, but to the junior partners, who had never done anything either to improve or spread the art and whose views of phonography were purely commercial, they appeared so formidable that they resolved, if possible, to avoid the issue.

Sir Isaac's presence at the Phonetic Institute was now no longer desired. He was denied any of the facilities of his printing establishment and found himself unable to control a line of explanation or comment in the weekly Phonetic Journal, which he had established and conducted for fifty years. The inventor had improved his system, but he could not revise his books. He had a message of interest to deliver to his thousands of adherents, but he was forbidden to speak through the only organ that would reach the phonographic world. The improvements which had been thoroughly discussed and approved by leading phonographers during three years' correspondence he now wished to present to the great body of writers of his system for their approval or rejection, but the facilities of his office, which had grown large and efficient by more than a half a century of his personal labor, were closed to him. The new conditions, however, were quietly but decisively met. In his eighty-second year the venerable author opened a new printing office! * * *

[He also commenced the issue, in January, 1895, of a monthly magazine, "The Speller," the October, 1896, number of which contained], in addition to a series of letters welcoming the improvements, a numerously signed appeal from teachers to the firm urging that a supply of books containing the improvements should be prepared for the approaching winter classes. The appeal concludes, "Hundreds of teachers and thousands of pupils now write the new style, and it is due to their conviction of its advantages that the teaching books should contain them, at least so far as to give them as an alternative." Isaac Pitman states that he forwarded this appeal to the firm, asking the favor of a reply on or before the 10th of September, and adds, "On the 11th of September I was taken ill, and I have been confined to my bed till to-day, 2d of October. Thus extra time has been given to the firm to consider their reply to the teachers' simple request. It is an emphatic 'No.' Any further reference of this subject to the publishing firm is unnecessary." This was only a few months before he died. "These improvements," writes Sir Isaac, "have been elaborated by infinite thought, consultation, and practice since March, 1892. * * * The amount of change in the writing of phonography caused by the improvements is very small indeed, but the effect in simplifying the system and the advantage to both teacher and pupil is great, making the art easier for the learner, shorter for the writer, and more legible and symmetrical." * * *

The approaching end of an heroic career is dimly foreshadowed in the November number of The Speller. The author quotes from the letter of an old friend and teacher:

Digitized by Google

"Most earnestly do I trust that your valuable life may be long spared, and that its close may not be disturbed by annoyances and dispute in connection with the great work which is due to your untiring energy and genius." Sir Isaac adds:

The congratulations I receive on my "recovery" lead me to think that phonographers, who all regard me with paternal affection, would be interested in knowing how I am and what brought me down. I am recovering, but not recovered. This is my seventh week of confinement. I am as weak as a baby, except in my head, in the power to guide my limbs consciously, and in possessing a sound bodily constitution. I am greatly distressed, but without pain, by shortness of breath, especially after the slightest exertion, such as eating, getting up from my chair to reach a book from the bookcase, and sitting down again. I then pant for five minutes and can not write until the heart throbs are equalized. The mitral valve of the heart does not fulfill its duty and allows the blood to leak back, and thus the contraction of the lungs has to force out this portion of the blood twice. The cause of my illness must be traced back to March, 1892. * * * On the 11th of September [1896] I took to my bed. On Sunday, 4th of October, my nurse dressed me. From that time I have been gradually but slowly recovering. * * * I am able to keep on The Speller, but can no more correspond with phonographers. I have only strength enough to write two or three lines, and then sit up and rest. In this slow work I occupy about four hours a day. Occasionally, for a day, I am too weak to read or write.

The December Speller contains many additional letters of encouragement and approval, and has the following significant words from this sadly worn but unyielding leader: "I regret that I am unable to report favorably of my health, 14th of November. Since the last bulletin, 30th of October, my strength has not increased, and my breathing has become more difficult. On Monday I dictated a portion of the Index of this volume to my clerk, and finished it on Tuesday. The effect of this slight exercise of the lungs was that on Wednesday I was too weak to be dressed." * * * After the preparation of "copy" for the December, 1896, Speller, Sir Isaac, evidently feeling that his diminished strength would not enable him to continue its publication, wrote and sent a brief notice for insertion in the Phonetic Journal of 5th December: "I shall be obliged if you will inform the subscribers to my monthly periodical, The Speller, that with the December number, now ready, the work will cease as a monthly, and will appear occasionally, as I have strength to bring it out." (Signed) Isaac Pitman. The notice was not inserted. * * *

[Sir Isaac died January 22, 1897.] Unusual honors were paid the departed veteran, if simultaneous press laudations the world over, wherever Anglo-Saxon civilization prevails, may be so interpreted. His body was taken to Woking January 28, 1897, and cremated, according to his wish, attended by his younger son. Simultaneous commemorative services were held in the venerable Bath Abbey Church, at the principal New Church in London, and at his home New Church at Bath. A notable event it was for a reformer and a "Dissenter" to be considered deserving a commemorative service in an English cathedral. In due time a mural tablet was placed by the city on the house in the Royal Crescent where he lived and died, to help preserve the memory of an inventor whose system of writing had been adapted to 14 European and oriental languages, and whose life's work, in simple "love of use," had proved him a time and labor-saving benefactor to his race.
